

Kubernetes: Proof-Of-Concept

Learn how to get your team to deliver faster and with higher quality with Kubernetes by removing bottlenecks in the production process.

Kubernetes

Learn how to get your team to deliver faster and with higher quality with Kubernetes by removing bottlenecks in the production process.

During this 1-Day hands-on Proof-Of-Concept, we will dive into how to design and deploy solutions using Azure Kubernetes Service and perform common DevOps tasks based on your current situation.

We start the day with an architecture workshop where we do an analysis of your current setup and set a goal for your future target architecture.

Together we identify a suitable area where we will do a test deployment of a Docker image to the Kubernetes platform hosted on Azure Kubernetes Services (AKS). Depending on your needs we might look at how to work with dynamic service discovery, service scale-out, and high-availability.

After the Proof-Of-Concept, you will have a Kubernetes cluster up and running in your environment.

Kubernetes

After the workshop we continue with finish up any loose ends, documents the results of this Proof-Of-Concept together with any suggestion on how to take your reporting solution forward.

Price: 35 000 SEK (excl. VAT)
