

# Azure DevOps and Automation

Accelerate Your Transformational Journey

## Azure DevOps and Automation

Migration to the Cloud is only the beginning of a transformation journey. Your transformational journey may begin with a single tentative virtual machine creation or an entire shift from legacy architecture and platforms to PaaS technologies... all which promise to offer greater scalability, performance, resilience, and efficiency.

However, simply migrating to the Cloud is not enough.

If you are often asking yourself... how can you respond immediately to improvements, build quickly, deliver continuously, and do all of this automatically - then QUANTIQ's Azure DevOps and Automation may be your answer! [Contact](#) our QUANTIQ Azure Expert Team today to find out more.

## The Service

DevOps is multifaceted and the implementation can be complex if not executed well. However, if done well, Azure DevOps and Automation will revolutionise the way you deliver your products and respond to your clients' needs.

QUANTIQ's Azure DevOps and Automation is a service which demystifies this complexity by introducing the fundamentals of DevOps and Automation through understanding and real-world examples. During the process, our QUANTIQ Azure Experts will also examine with you, the complementary approaches available, such as Agile and Reliability Engineering - presenting both the technological and cultural benefits of introducing a DevOps approach.

## QUANTIQ's Azure DevOps and Automation - What's Involved?

1.

### Introduction and Discovery

Methodologies and Concepts  
Tooling and Orchestration  
Business Maturity and Baselines
