

Experience the simplest Online Video Platform integration like never before by the API or the console.

Overview

BlendVision VOD Streaming is for video service providers who are dissatisfied with current OVP solutions. It offers full-stack video service including per-title encoding, CDN streaming and DRM to simplify your video workflow. All benefits are based on economical pricing and advanced technologies.

Architecture

Online Video Platform via an API

Customer Story

Transcoding Giloo's entire documentary library and adding DRM in just 3 days

"Giloo successfully gave thousands of festival attendees streaming access to our full collection of feature-length documentaries—this was only possible because of KKStream's cutting-edge transcoding technology, Hollywood-grade DRM, and extensive content delivery experience."

— James Teng, Director of Giloo

About KKStream

KKStream was established in 2016 by Asia's leading entertainment company KKBOX, specializing in video streaming technology and operations business.

KKStream provides technology of vMVPD for cable companies and OTT platforms for telecoms in Japan and Taiwan, successfully kickstarting new streaming businesses and migrating multi-million user services to our scalable video streaming platform.
