

PetaBytz Azure Virtual Desktop

-
- Virtual Desktop Infrastructure hosts desktop environments on a remote central server and users can access these virtual desktops from anywhere using any device.

Why do you need VDI?

- If you are looking at standardizing desktop environments, providing remote access to your workforce, or reducing outages and downtime, then Virtual Desktop Infrastructure is perfect for you.
- VDI simplifies desktop support, maintenance, patch management, data protection, and much more.

Benefits

Workspace flexibility

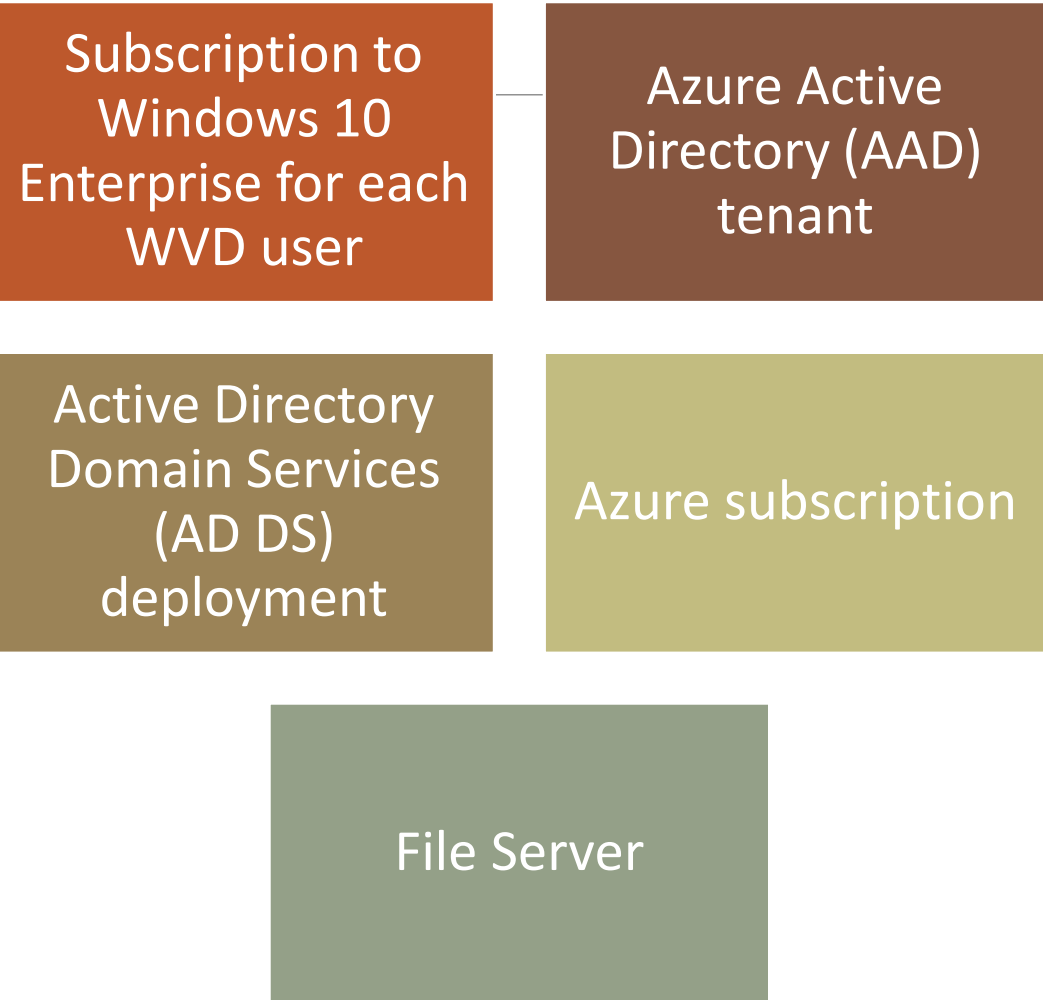

Simplifying IT management

Geo-replication

Dynamic updating

Decreased security risks

Azure Virtual Desktop Components

- Azure Virtual Desktop is a very viable solution for the modern workplace.
- Our service enables 25-30% cost savings compared to on-prem environment.
- It's the only solution providing a very cost-effective way to deliver a modern desktop experience in line with user expectations, it is fast, and solves some of the management complexities of a fleet of hardware endpoints.
