

The Single Source of Truth for Technology Expense Management.

TekAxiom, Azure deployed SaaS platform, incorporating RPA, AI and Machine Learning to effectively manage technology and telecom expenses; validate and accurately allocate costs and fully automate vendor payments. You receive device agnostic, point-n-click access to measurable, meaningful financial improvement and governance with role-based Dashboards and Power BI for detailed reporting and analytics.

Our technology leverages Microsoft Dynamics 365 and automates invoice capture, parses line-item detail, initiates AI-driven “auto-audits” and “auto-disputes” with aging detail and savings calculation workflow. The Savings Analytics Dashboard provides real-time tracking of every dollar saved, every day. Eliminate human error; reduce processing time and reallocate resources to high-value corporate initiatives.

Full visibility into technology expenses anytime, anywhere and on any device

- **Invoice Management & Audit**

Fixed, mobile, cloud, UCaaS, SaaS and more – AI assisted auto-capture, parse, audit (3-way match) and dispute workflow

- **Inventory & MACD Management**

IT assets – devices, circuits and services matched to site, HR/GL data

- **Savings Module**

AI auto-audit line-item verification, rate assurance, exception and dispute resolution along with service optimization and sourcing

- **Accounts Payable & Cost Allocation**

Automated payment management and ERP integration eliminates late fees and increases Business Unit governance

- **Analytics and Reporting**

Data visualization for decisioning and predictive views of operating expenses with Power BI and AI enabled natural language search
