

# Azure Cost Optimization: 1 Day Workshop

## Understand, optimize, monitor, and report your cloud spendings in Azure

Scalability, high-availability, security, flexibility, and cost efficiency; these are the main benefits that Azure promises. As easy it is to deploy services in Azure, as fast costs can increase and you may find yourself in the position to have exceeded your planned monthly budget, because of the complexity related to the *metrics that drive the costs*.

The **1-day Cost Optimization workshop** consists in an **assessment** to understand your Azure estate, where you are regarding costs vs budget, an analysis of the workloads you are currently using and provide you with a **briefing** and **recommendations** for cost optimization scenarios.

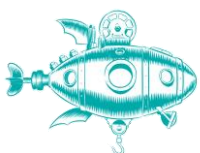

### Topics covered by the workshop:

- Azure Advisor Recommendations
- Rightsizing the workloads based on the usage metrics
- Autoscaling
- Special VMs recommendations (Azure Spot, Burstable)
- Azure Reservations vs Start/Stop Automation and when to use each of them
- Azure Hybrid Benefit options
- Azure Policies for resource creation based on location or SKU
- Overview of Azure Cost Management
  - Resource Tagging
  - Monitor costs with Cost Analysis tools
  - Budgets & Alerts

### Deliverables:

- Detailed report of actions you can take to drive cost optimization

**Note:** The workshop/assessment does not make any changes to your Azure environment, nor force you to take actions based on the recommendations. Reader-access role to resources may be required to evaluate and propose cost optimization actions.
