

The independent Hospital- and Research to Home SaaS platform

Privacy by design and freedom of choice for Healthcare providers and Researchers

Why now

Financially unsustainable

Increasing demand,
escalating costs

Labour force shortage

Aging population,
Increase chronic
diseases

Unnecessary visits / routines

Shifting consumer
demands, inefficient
work process

COVID-19 accelerates

COVID-19
accelerates new
digital business
models

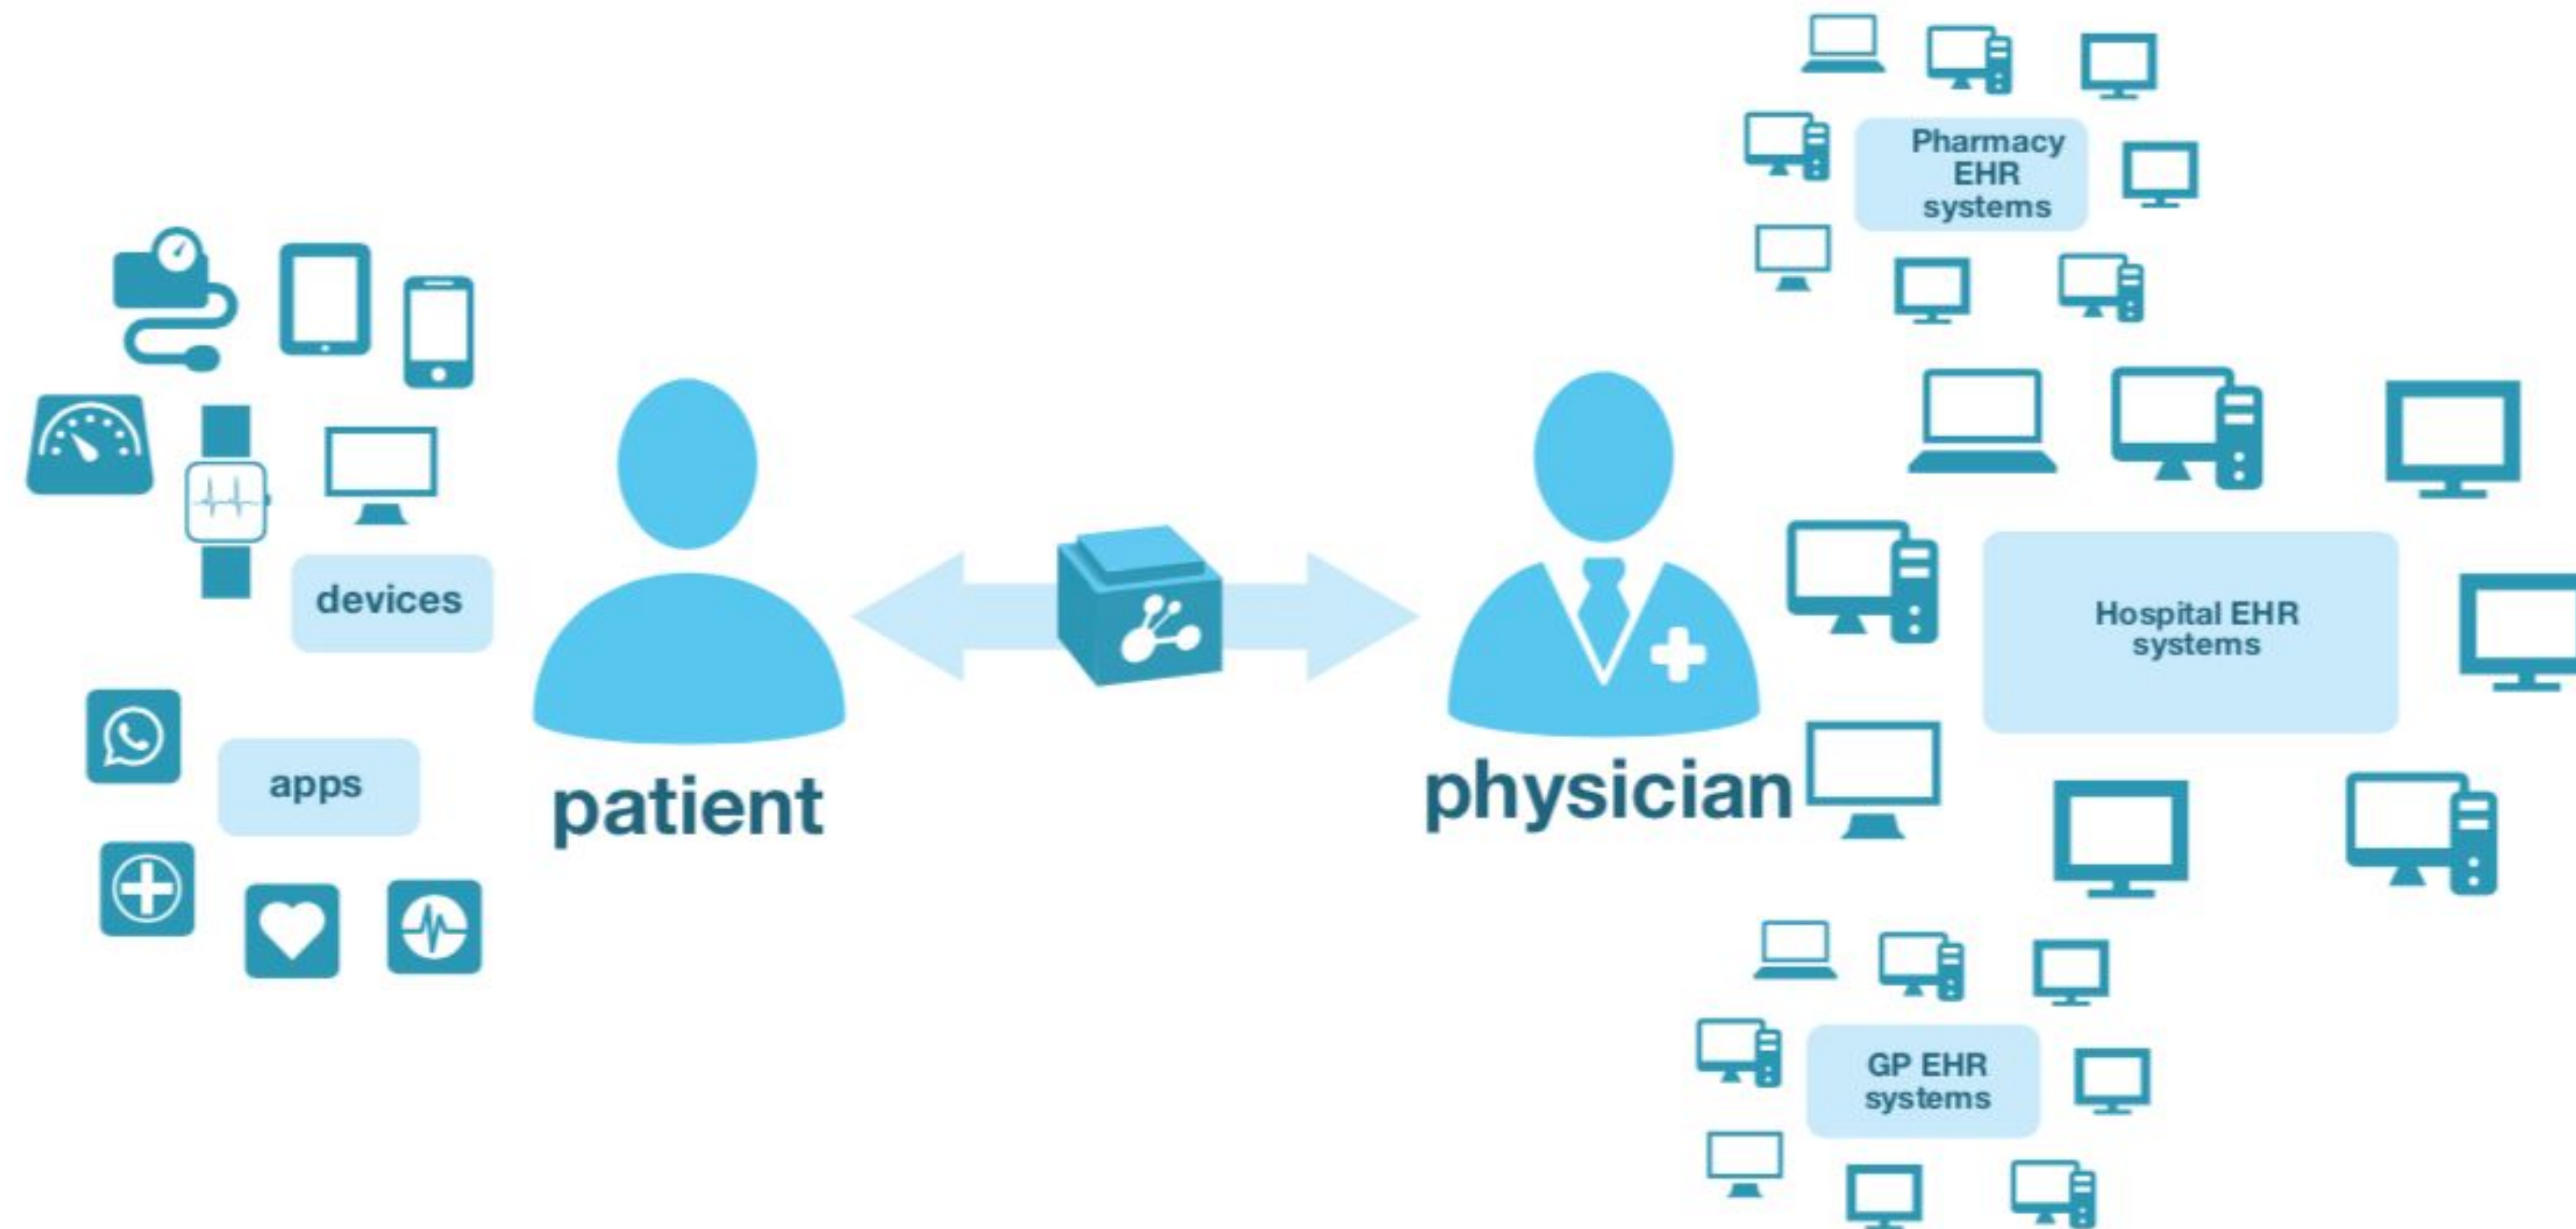

Need for digital tools

Digital tools for
process optimisation.
Structured & secure
data for connectivity
and AI

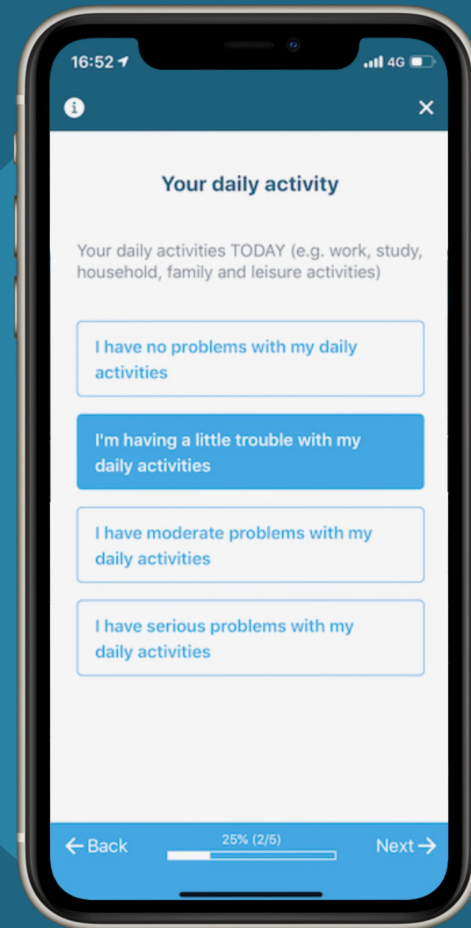

Hospital & research to home

Hospital and
research to home will
be the new normal

Bridging the gap

Structured data retrieval

Open HealthHub Platform

ePROs

Questionnaires,
patient instructions
eHealth modules
mobile app android
and iOS

Remote patient monitoring

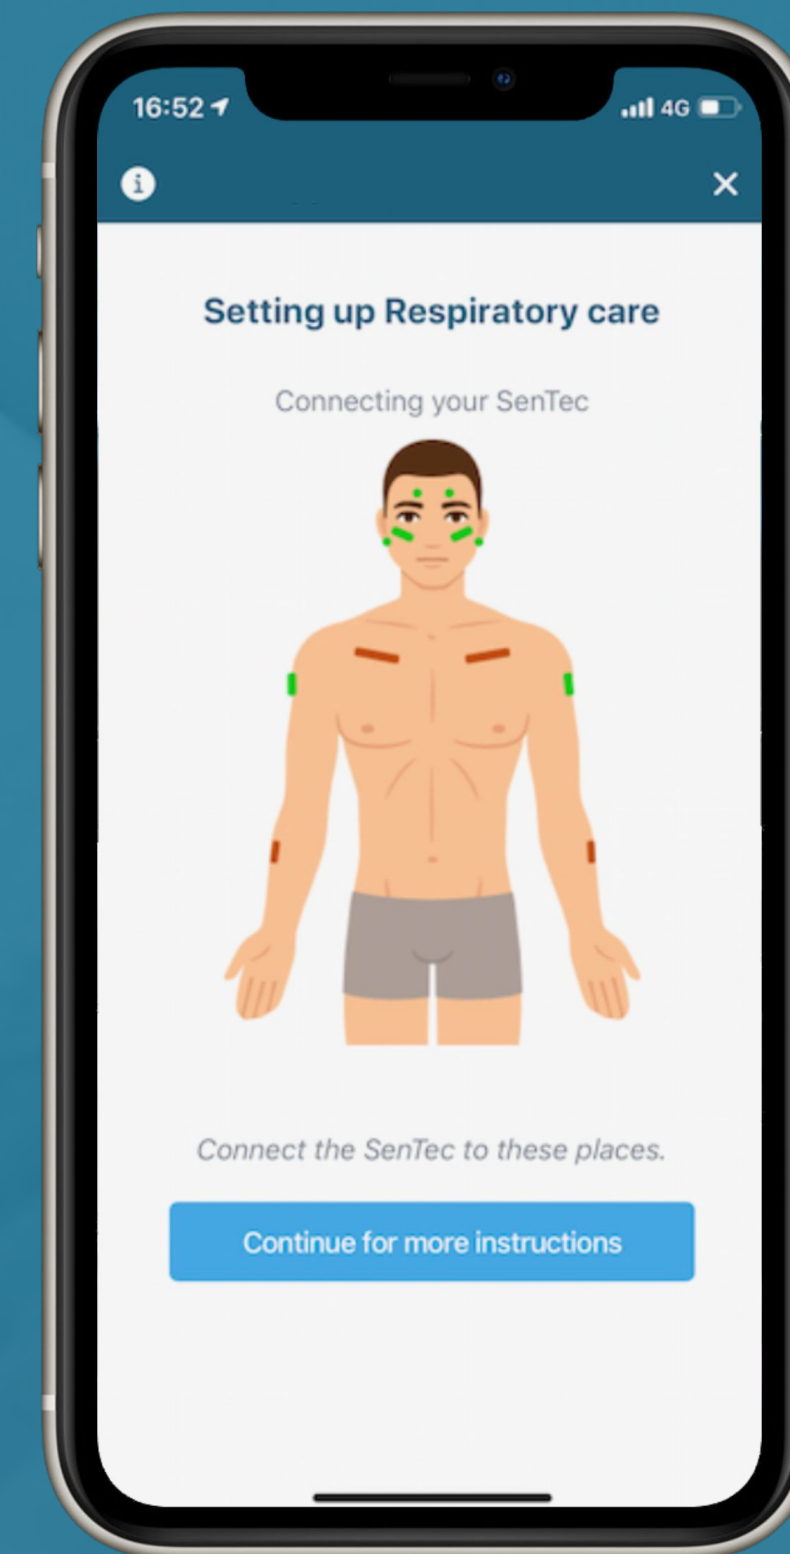

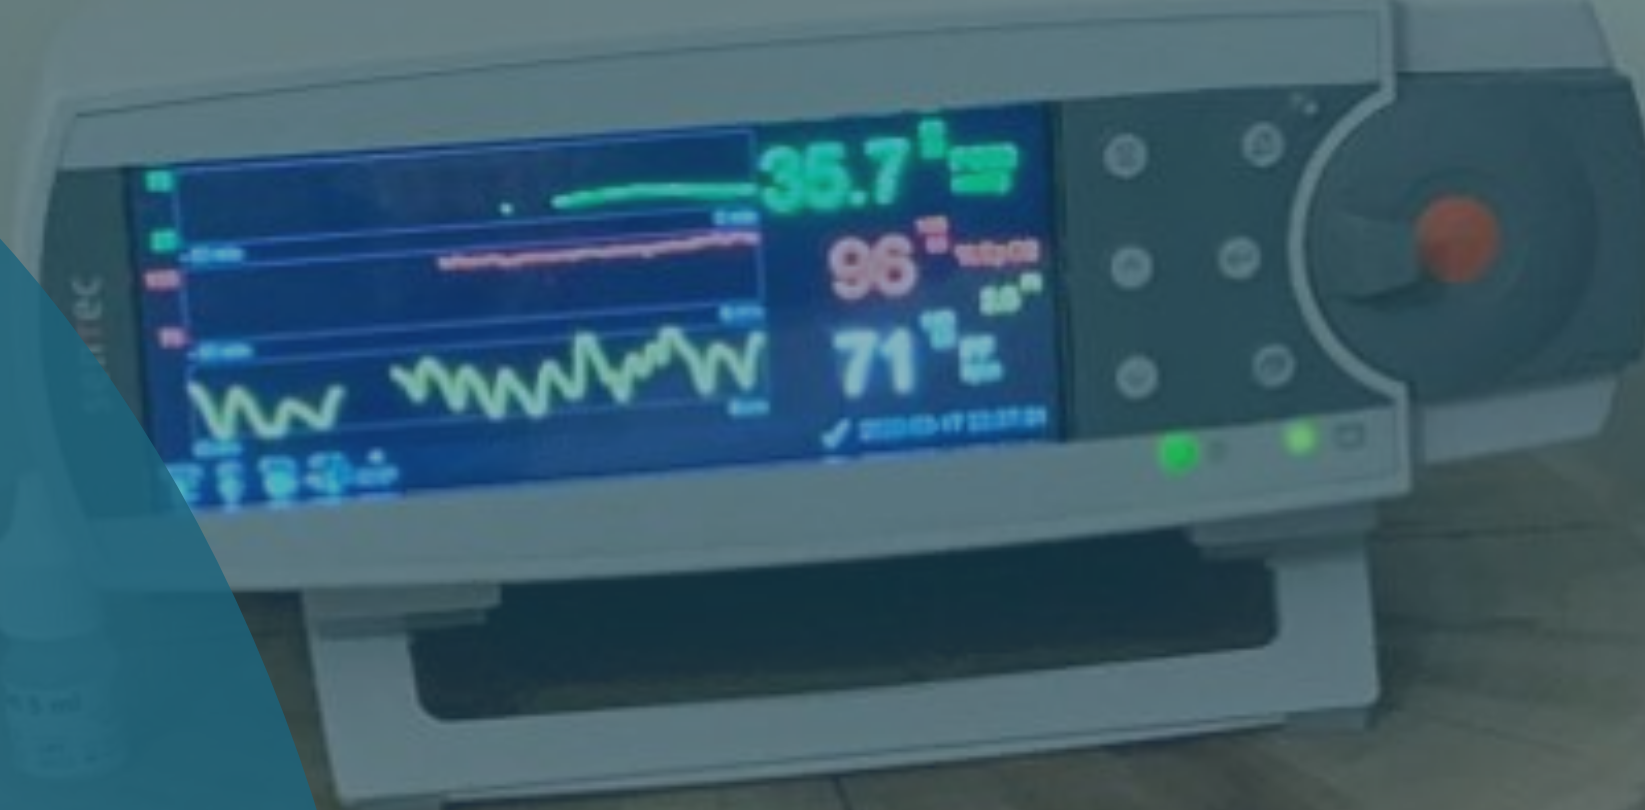

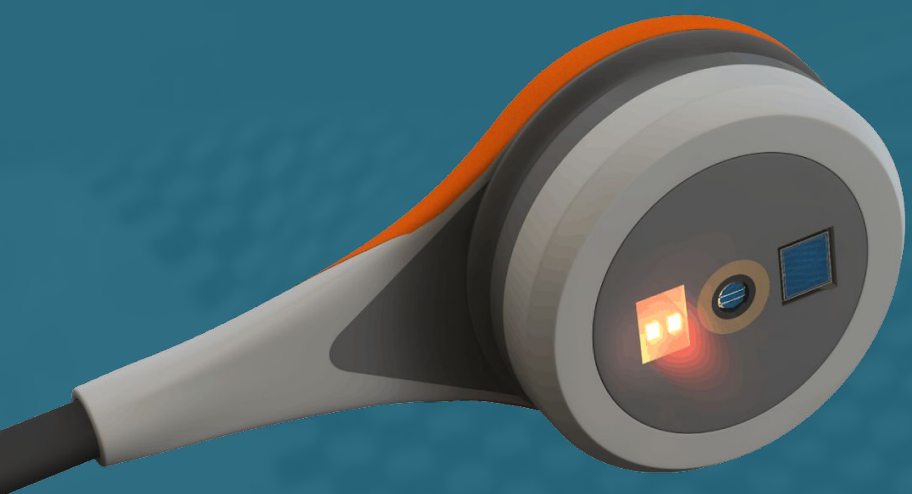

Connects to every
device with
bluetooth, cloud or
with our gateway

FHIR API platform

Interoperability is key.
Structured capture of
data for treatment,
research and AI

Hospital-to-Home

Remote monitoring and ePro's of patients to improve the quality of life for patients and ease of work process for the healthcare professional

Research to Home

Improves the response rate and participation. Contextual data around remote monitoring at home. More efficient and cost effective research in lesser time.
