With integration comes power. The ability to seamlessly access and utilise real-time data, and automate processes between disparate, bespoke or customised legacy solutions can give you a significant competitive edge and extend the lifetime value of your applications. So, where do you start?

Challenges

Few organisations have the requisite internal resources with the up-to-date technical knowledge, capabilities and capacity to deliver a comprehensive and challenging integration project.

Solution

Our introductory 3-hour strategic **adaptiv.align** meeting is an opportunity for your senior business stakeholders, CIO, CDO and CTO to discuss technologies, your digital transformation strategy, and the all-important question of partnership. Before you commit.

Outcome

At the end of this technology and partner briefing, you will have an overview of how the integration process will support your businesses strategy, an understanding of the business benefits, and the required skills, experience and capabilities of a trusted partner.

adaptiv.align

"(Adaptiv) are probably the easiest vendor I've ever worked with," says Micky Heath, Victoria University of Wellington Project Manager. *"They're flexible, reliable and accountable. And they kept us ahead of the game, which is important with a new technology stack."*

A partner you can trust

We're a New Zealand owned and operated consulting partner invested in helping you to leverage and extend the value of your existing business applications, not selling you new ones.

We provide world-class integration and cloud technology consulting and execution services.

Value you can count on

With over a decade of experience in delivering small- and large-scale integration for the enterprise, we add clear, repeatable and measurable value to our clients' bottom-line.

That's why we are the partner of choice for some of New Zealand's leading organisations.

Confident decision-making

By the end of your **adaptiv.align** meeting you will understand how the integration process will support your businesses strategy and have an appreciation of the business benefits.

You'll also know what to expect from your integration partner.

Services

adaptiv.align is the first in a series of four workshops designed to help you to undertake your project with confidence, establish desired business outcomes, define future goals and offer proof of value to stakeholders.

adaptiv.**align**

A 3-hour strategic alignment meeting with organisational C-level stakeholders to introduce Adaptiv Integration solutions, services and capabilities.

adaptiv.**educate**

A half-day technical product briefing to discuss available and recommended technologies.

adaptiv.**assess**

A 3 to 5-day maturity workshop to establish the value and limitations of your current approach, facilitate discussions around definition roles and responsibilities, processes and future technology roadmaps.

adaptiv.**verify**

A 2 to 3-day workshop is designed to prove that the selected technologies and approach will deliver the concrete outcomes required by the business.

adaptiv.**deliver**

adaptiv.deliver is your blueprint for success. Our Architects and Developers work with your team to guide you

Adaptiv and Microsoft

The cloud is changing the way we build and run software, but not all software will be in the cloud or in a single cloud.

Azure Integration Services enable you to build new integrated solutions in the cloud that leverage resources on premises and cross-cloud. Services such as Functions, Logic Apps, API Management, and Service Bus provide you with the tools you need to integrate your existing applications and services and give you the scale and efficiency of Azure to run and manage them. This, combined with Azure DevOps, provides solid managed Continuous Integration (CI) and Continuous Deployment (CD) for your applications.

Adaptiv is proud to be a Microsoft Gold Partner. We hold the highest possible levels of competency for Azure integration, development and DevOps.
