

# VxSpace

VxSpace is a Web portal through which you can setup various platform environments such as windows or linux for end users to access varied application packages with minimal hardware requirement. On Successful deployment of the required environment, you can add the required number of end users to the environment. This will enable the end user to access applications via the VxSpace Desktop App shared on email. The VxSpace Desktop App can be used on Windows, Mac OS X and Linux machines. The VxSpace web portal also provides details on charges incurred for a given period and download invoices in PDF format. The VxSpace Web portal provides you and your support staff to monitor the performance of environment such as CPU/RAM consumption by end users, network access latency etc., The VxSpace Web portal provides you Analytical Engine containing detailed report about the end user interaction with environment. The detailed report consists of total duration end user utilized the VxSpace environment, the applications used by the end user and timeline.
