centrality

A holistic approach to cyber security to protect your business data.

SIEM, XDR AND MANAGED 24x7x365 SOC.

Leveraging the power of the Microsoft Security stack in Azure Sentinel and Microsoft Defender, Centrality is able to provide your business with the proactive detection of malicious activity, timely isolation and remediation.

See what customers are saying:

"To introduce a security capability entirely based on Microsoft technology, simply made sense. We sought out the support of one consistent vendor, along with one number to call for everything. Microsoft and Centrality have together delivered on this requirement. I'd strongly advise any and all UK-based businesses to consider taking the very same approach."

- Simon Rolfe, IT Director; Charlie Bigham's

WHAT WE OFFER

The sophistication of cyber criminals means that relying on just a firewall and antivirus solution is simply not enough.

Cyber threats have evolved; operating targeted and blanket campaigns to infiltrate companies and their systems to extort money or information for financial gain.

Leveraging the power of the Microsoft Security suite, including Azure Sentinel and Microsoft Defender, Centrality undertakes monitoring, threat hunting and responding to security threats once they are discovered. The service also includes consultancy that will guide the you on a journey of continual improvement in your security posture.

Our Managed Security services leverages external intelligence from third parties as well as threat intelligence by Microsoft hunters to proactively detect and mitigate threats.

SIEM and XDR capability, backed by a 24x7x365 Managed Security Operations Centre

Continuous Protection

Centralized security information and event management (SIEM), combined with an expert dedicated Security Operations Centre team, which proactively monitors, detects, analyses & mitigates threats as they happen.

Isolation, Mitigation and Remediation

Where security threats are detected or identified, they will be isolated to mitigate any further risk they may pose to your network or data, followed by further remediation action to prevent similar threat recurrences.

Threat Prevention

Proactively using Artificial Intelligence to hunt for threats, while dynamically responding to changing world events and implementing best practice security posture improvements. Utilise security simulations to test and identify room for improvement within policy, culture and practices.

Compliance

Maintain compliance to increasing industry requirements, along with regulatory legislation, by deploying, monitoring, reviewing & improving corporate policies and processes; in addition to system patching and maintenance to remain up-to-date.

Security Experts

Access to diverse skills, incident responders, operational engineers, security engineers, cyber analysts, compliance auditors and technical architects. Peace of mind access to Microsoft Premier Support.

Communication & Collaboration

Provide proactive communication to key stakeholders where threats are identified, or compromises identified. Provide monthly security briefings on Security Landscape, and training collateral for security awareness training.

Reap the benefits of deploying the capabilities of the Microsoft Security stack to achieve SIEM and XDR functions within your business, with the peace of mind that comes with the support and expertise of a Microsoft Partner that will provide the wrap-around consulting and managed service you need.
