Human Resource Management (HRM):
HRM, (Human Resource Management): The Human Resource Management module aids the ERP software in managing human resources. Every industry needs human workforce for their successful operations. All this human workforce is managed by ERP module for Human Resource Management. ERP human resource module also maintains the record of all employees including their name, designation, employee code, salary, & their address. These details are stored in the module securely.

Finance & Accounting:
With support for multiple currencies, budgeting, and bank reconciliation, OmegaERP financial management module will make your business more efficient and more productive. Manage your general ledger, journals, budgets, and accounts payable (AP) and receivable (AR), Journal. Conduct all your banking activities, including processing bank statements and payments by methods such as check, cash, as well as internal and external reconciliation of various accounts. Create various financial reports including profit and loss, cash flow, balance sheet, aging, and Trail balance, Balance Sheet report.

Purchase:
From Procurement to quoting, from ordering to receipt and invoicing, OMEGAERP Purchase Module caters to all the functions. Be it Contract Management, Vendor Management, product received or returns, OMEGAERP handles them with ease.

Production:
ERP Production Module is helping manufacturers to plan and control the manufacturing process. OmegaERP facilitates Item create, Recipe setup, Production Estimation, Finish Product Costing, Finish Product Receive etc.

Commercial:
Import operations are important for every trading business. This increases credibility of the business. Import involves myriad of intricate processes and activities. OMEGAERP provides the following areas; Commercial Purchase Order, Purchase Invoice, GRN, Final Costing, accommodation of changes in PO and GRN, Quality Results at Loading Port / Unloading Port, Import Expenses Allocation, total Landed Cost etc.

Fixed Assets:
Improve financial control and put company assets such as buildings, machinery and equipment to the best possible use with tools for tracking, and analyzing fixed assets. For each asset you can track and depreciate by calendar or fiscal year with several methods including Straight-line, Double declining balance, Sum of years. Analyze and track assets historically to better manage of asset.

Warehouse & Inventory:
Manage inventory based upon quality status, units of measure, expiration date, lot number, batch number, serial number to ensure the right inventory is available for manufacturing and distribution activities. OMEGAERP Warehouse Management system helps to control and manage day-to-day operations in a warehouse efficiently. it allows to remotely execute and track details of different warehouse operations like: receiving, shipment, all internal movements, offering end-to-end support to the warehouse operations, the solution offers inventory accuracy, inventory visibility.

CRM:
CRM functionality helps attain control of customer acquisition, retention, loyalty, and profitability for your business. OmegaERP facilitates Project Flow Process, Deal Process, Lead Process, Opportunity, Project Info, Customer Information etc.

Sales:
The Sales module provides tremendous versatility, control, and power over sales and order entry policies. Aiming at superior customer service and simpler order–to-cash cycle, OmegaERP facilitates quick order creation, delivery and invoicing, contract definition, pricing and discounts, offering etc.

Services:
The ticketing software allows business to capture, manage, and track the status of customer issues in an organized and highly collaborative manner. A support ticket is a process of tracking the updates and details of a problem from the moment it is reported until the issue is resolved.
