

APPLICATION ACCELERATOR

ARCHITECH

How do you drive speed without compromising quality and total cost of ownership?

Business Leaders are challenged to adopt modern technology & modern methods to meet market demands.

90% of executives say organizations must **speed** up digital transformation – with cloud at the core – to become agile and resilient. (Accenture)

78% of organizations worldwide say the global pandemic was the catalyst for shifting to a digital-first strategy. (IDC)

77% of respondents say they have started but failed to complete at least one modernization program partly due to inadequate modernization expertise. (Advanced Computer Software Group)

**Arhcitech gives you
everything you
need to modernize
your applications
With speed.**

World-class,
dedicated
Product Team

Proven workflow,
best practices
& processes

Enterprise grade
technology &
Reference architecture

**Building with reference
architecture enables you to
get to market 54% faster,
among several other benefits.**

Tried. Tested. True.

Reduce risk
that comes from
building from the
ground up.

Increase velocity
of projects &
decrease time to
market

Proven quality
with validated
technology,
architecture and
workflows.

“ There’s a very strong correlation between **developer productivity** and business impact—it’s key to the success of the company.

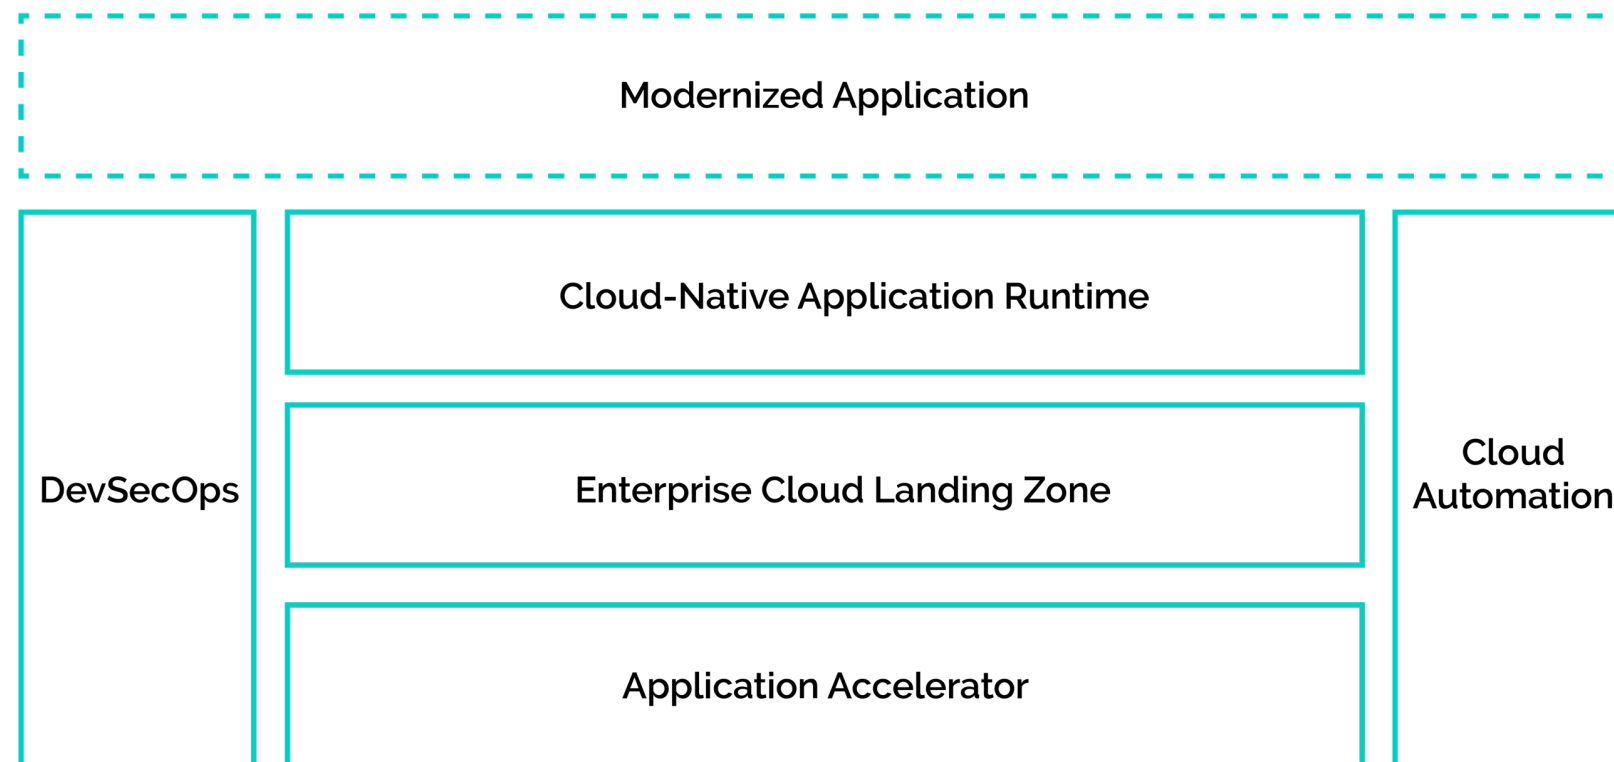

SEBASTIEN LE CALVEZ ▶
GM, Digital & Application Innovation

How can you drive developer velocity?

“ Enterprises should embrace repeatable architectures and scaffolds to drive speed in their development practice. The **Architech Accelerators** are a great example of that.

Pre-defined, Opinioned Reference Architecture

▶ Building Block 1: INFRASTRUCTURE ACCELERATORS

We set the stage for you to build in the Cloud

Pre-settings, workflows, & technologies to ensure your landing zone is scalable and secure.

▶ Building Block 2: SLDC ACCELERATORS

We enable your team to deliver to the market

consistently and with speed. Full end-to-end DevSecOps capabilities, including automated continuous integration/continuous delivery (CI/CD) pipelines.

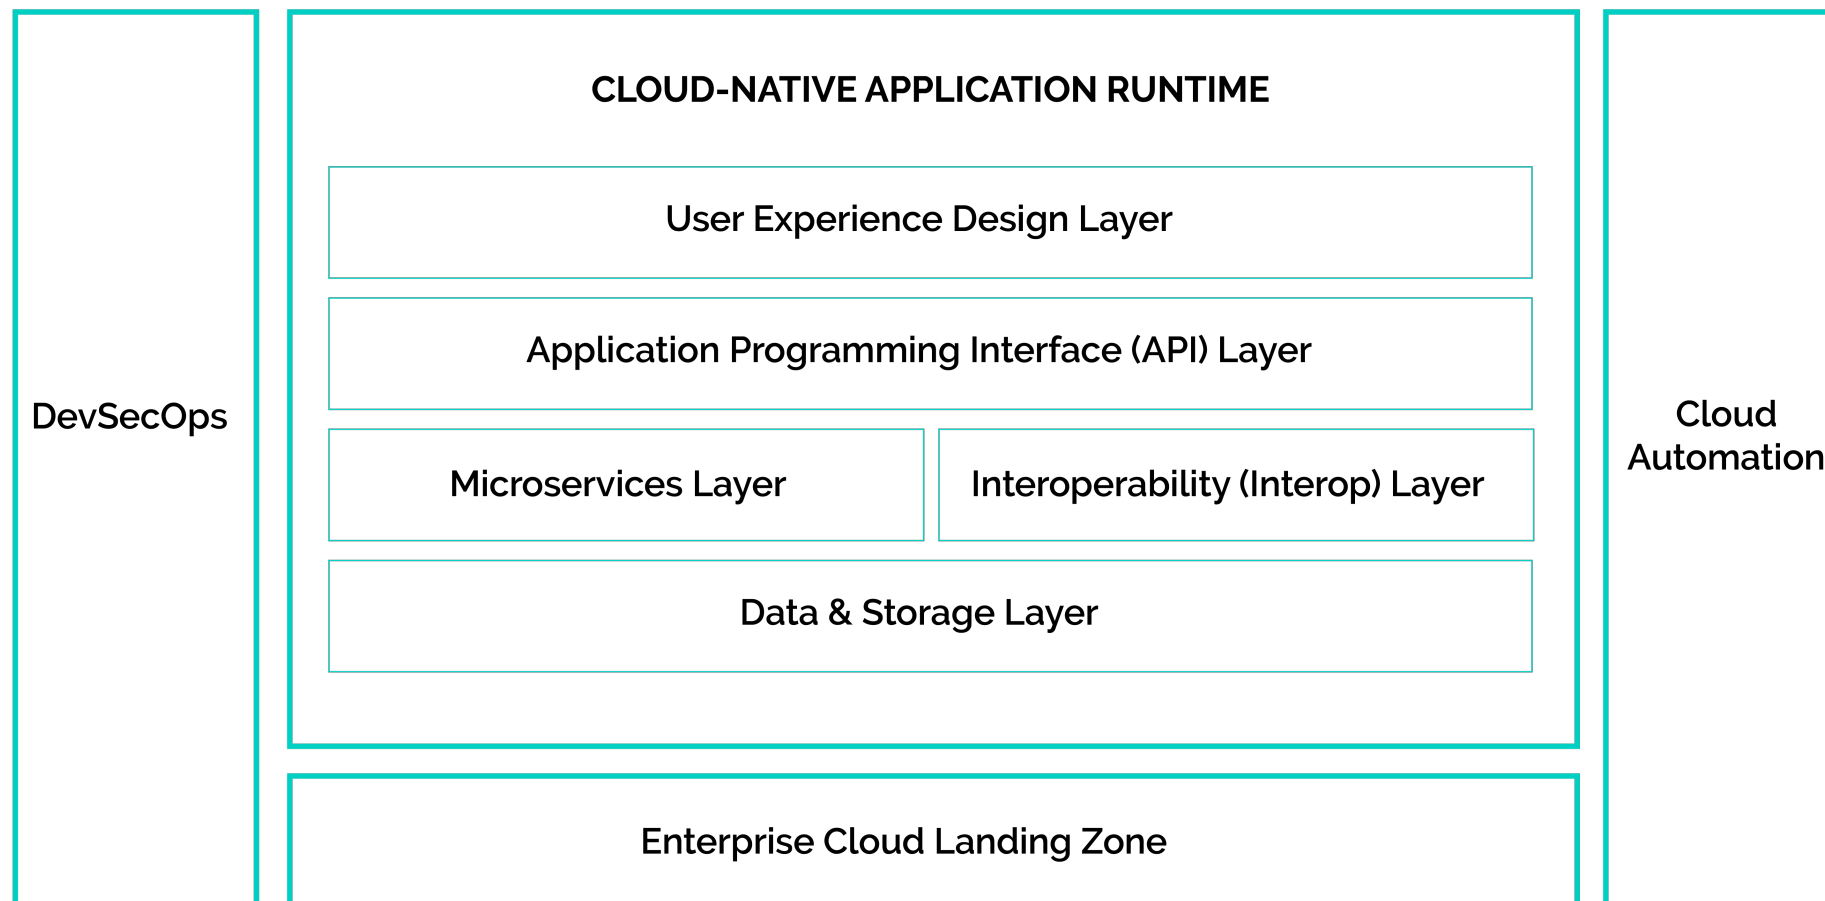

▶ Building Block 3: APPLICATION ACCELERATORS

We ensure your application's integrations and front-end

deliver consistent quality. Robust blueprints of integration paths for your data, microservices, Cloud environment, app mesh, Kubernetes & UX design system.

Application Accelerator

- ▶ We ensure your application's integrations and front-end deliver consistent quality.

BENEFITS

- Start coding your application & release prototypes to market to prove your business hypothesis with speed.
- Proven architecture for each integration path that ensures quality.

Robust blueprints that detail 5 integration paths:

- Inter-operational
- Data
- Microservices
- API
- User experience

Build Innovative Digital Products to Drive Market Impact

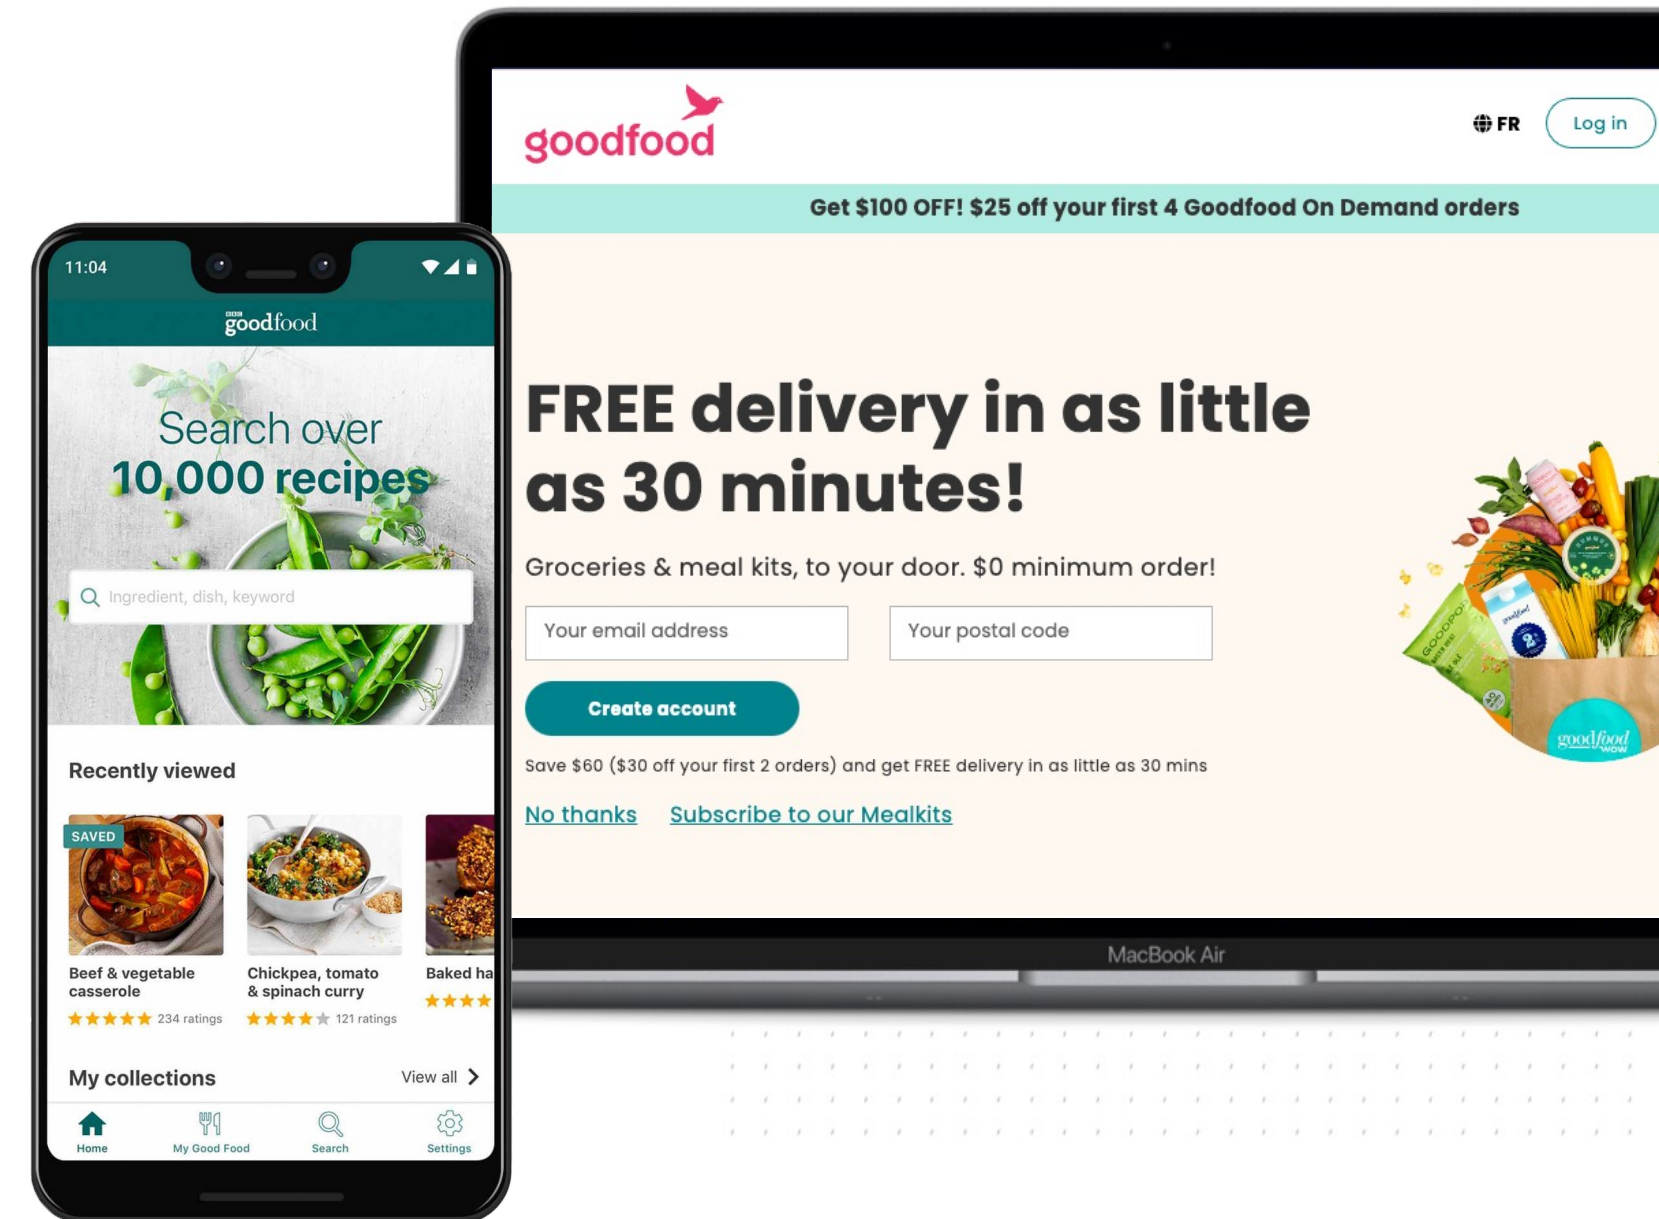

Architech partnered with Goodfood to streamline its last mile delivery planning process from a manual to an automated process that can scale up to 100+ fulfillment centres.

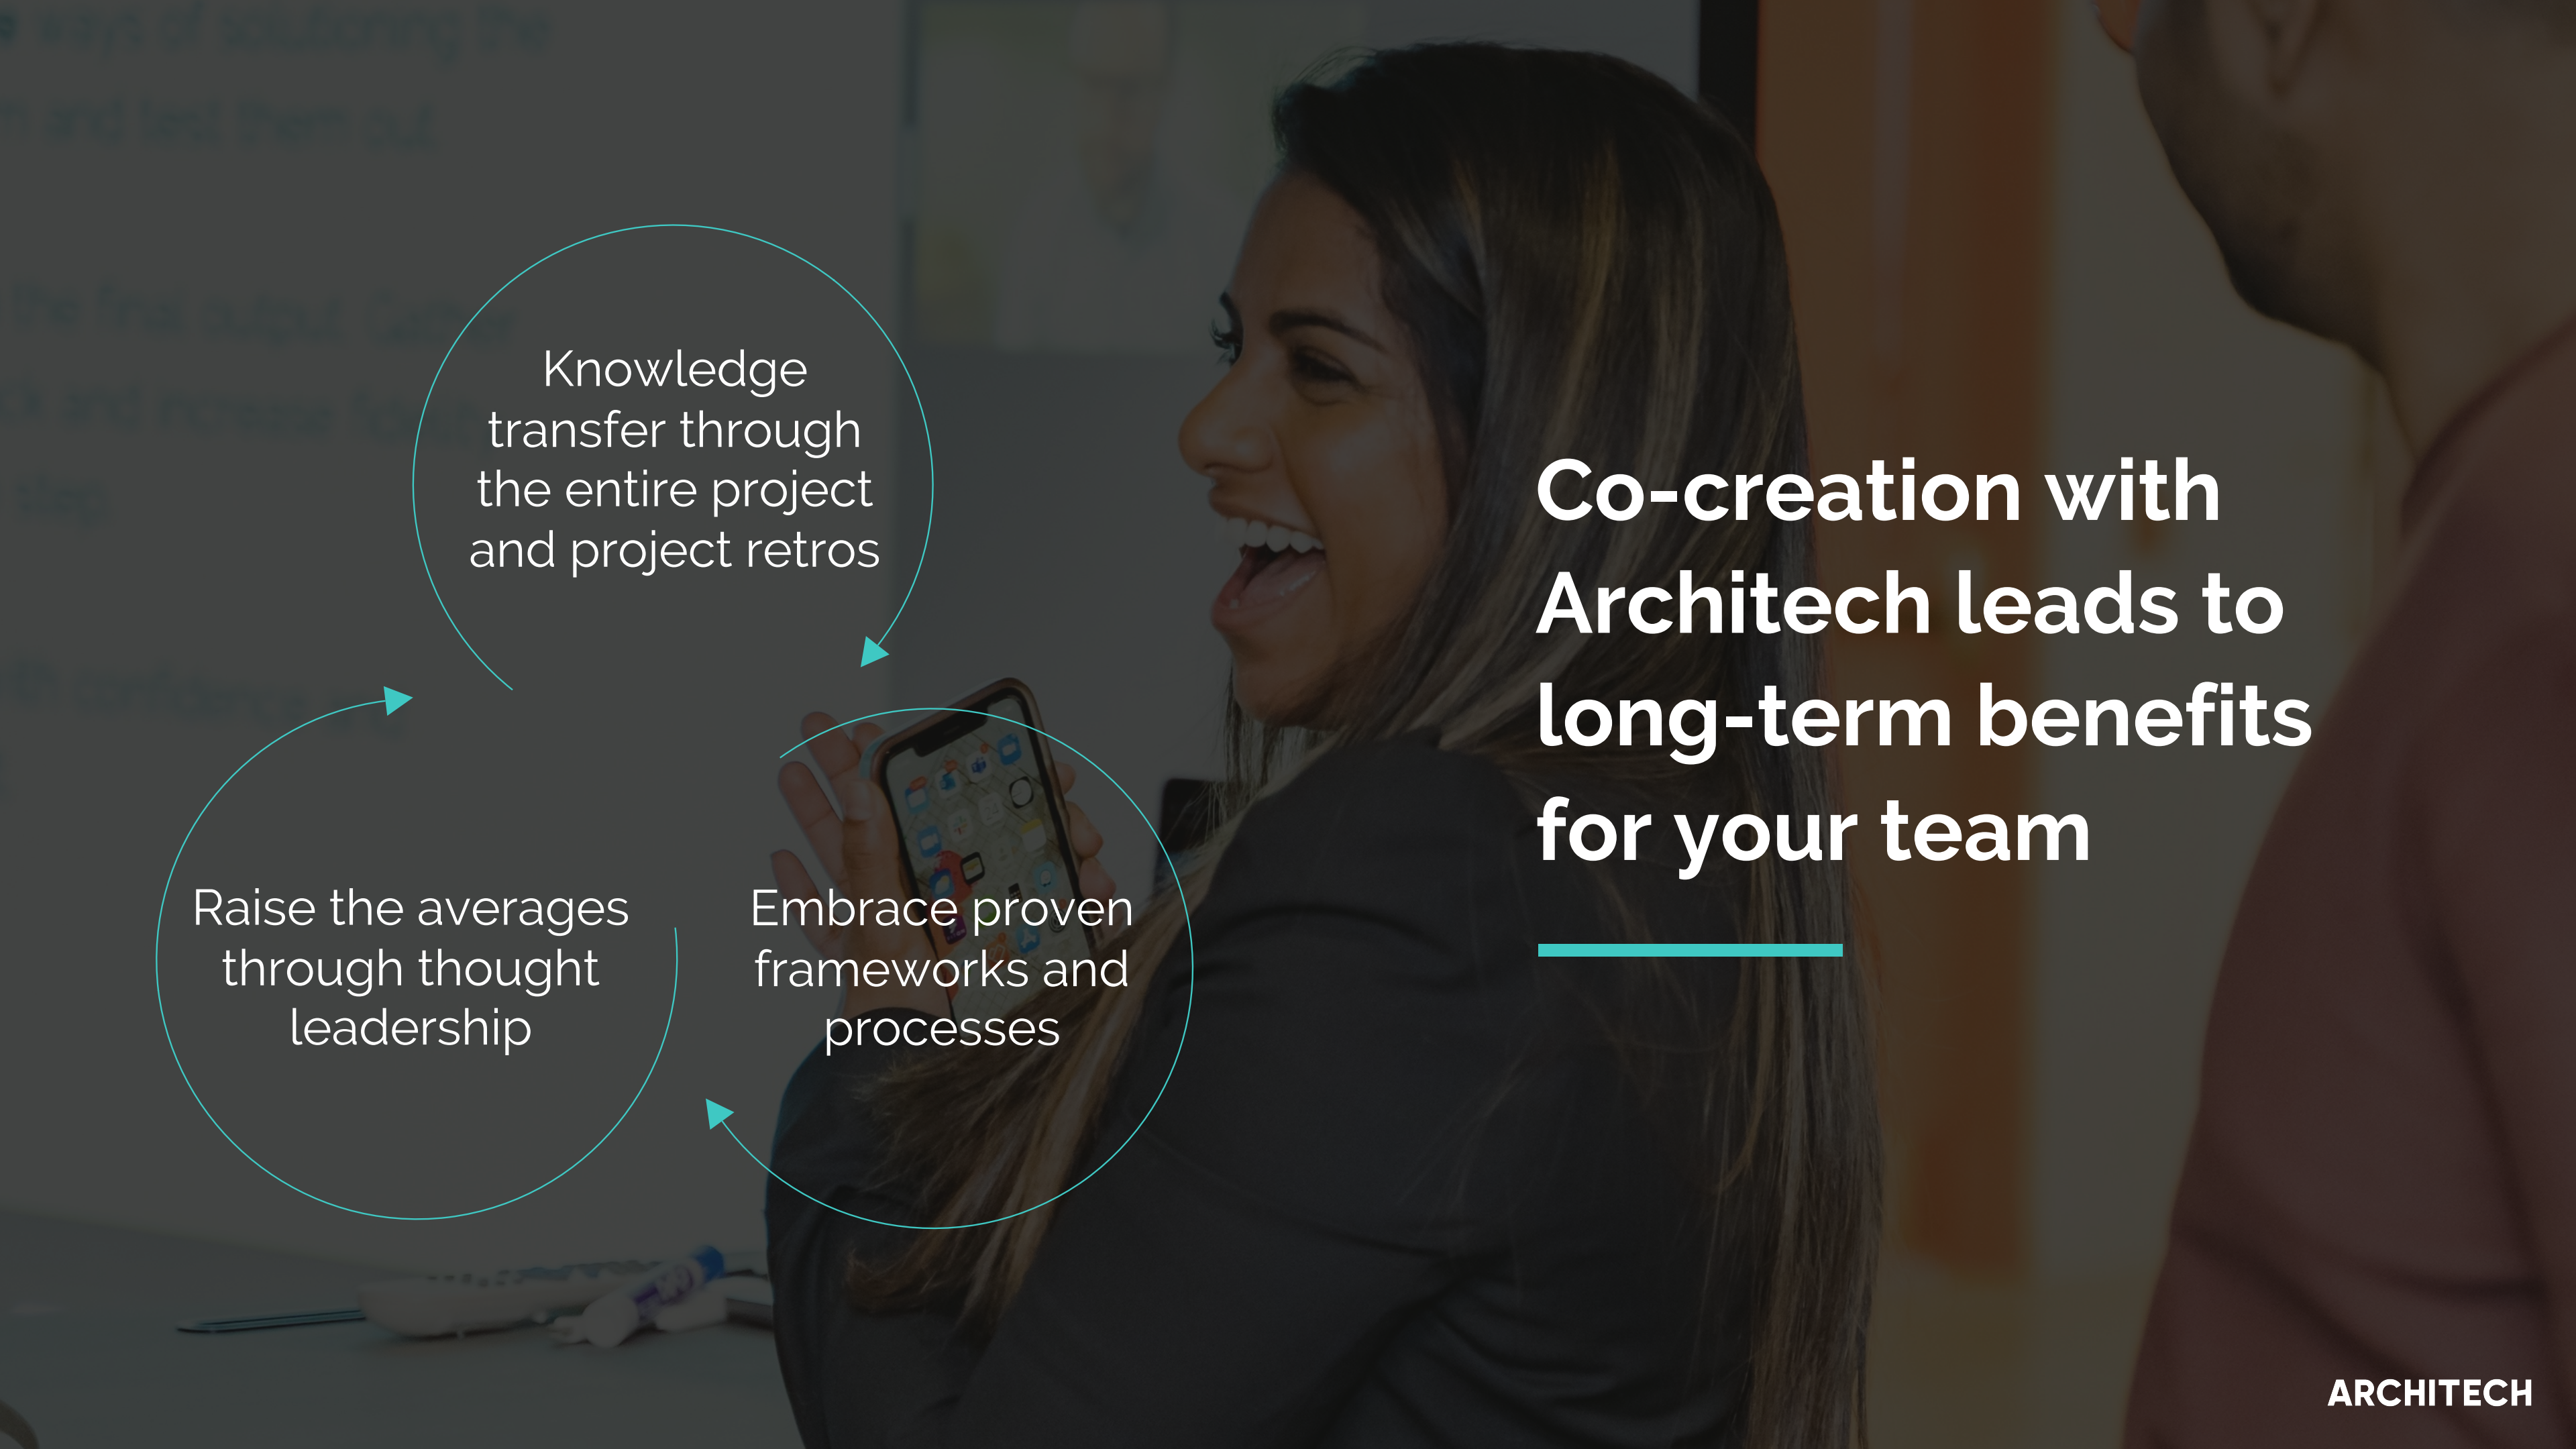

Through this mobile-first digital solution, Goodfood is able to enable faster deliveries within 60 minutes of ordering and enables customers to pick and choose their delivery slots 48 hours in advance.

“
Increasing delivery speed and flexibility is key to Goodfood's members and growth strategy. Our clients expressed strong interest in a fast and flexible service to simplify their grocery shopping and meal planning, and Goodfood WOW is our answer to that need.

- Jonathan Ferrari, Chief Executive Officer

“ I would recommend Architech to any organization that need strong engineering experience ... Architech was a key contributor in helping us build our Ecomm platform.
- VP Engineering, Goodfood

Co-creation with Architech leads to long-term benefits for your team

Knowledge transfer through the entire project and project retros

Embrace proven frameworks and processes

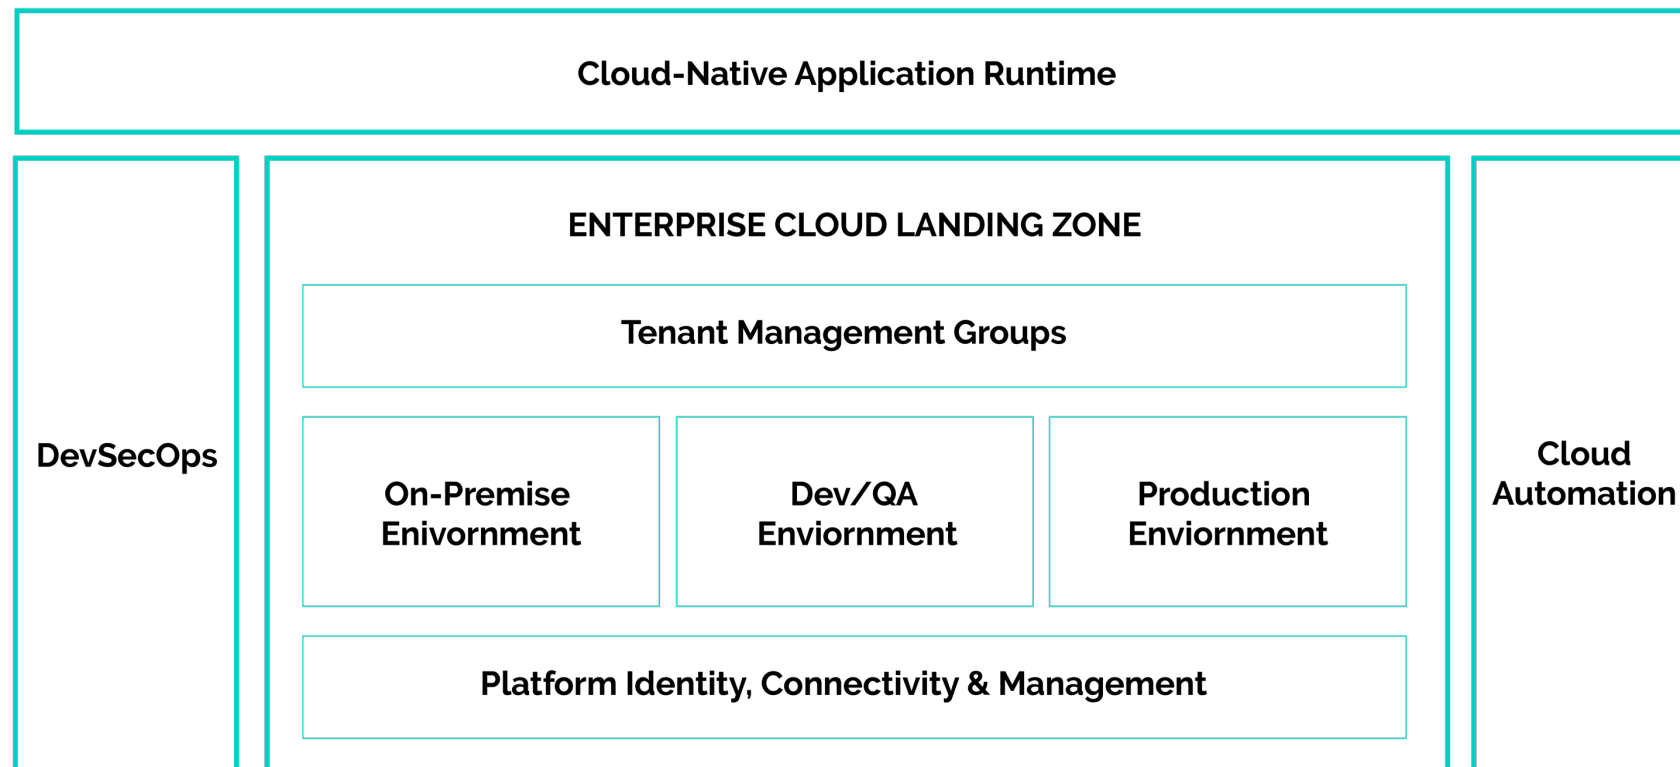

Raise the averages through thought leadership

**We have an Accelerator for
every stage of the Application
Modernization Journey:**

Landing Zone Accelerator

- ▶ We set the stage for you to build in the Cloud

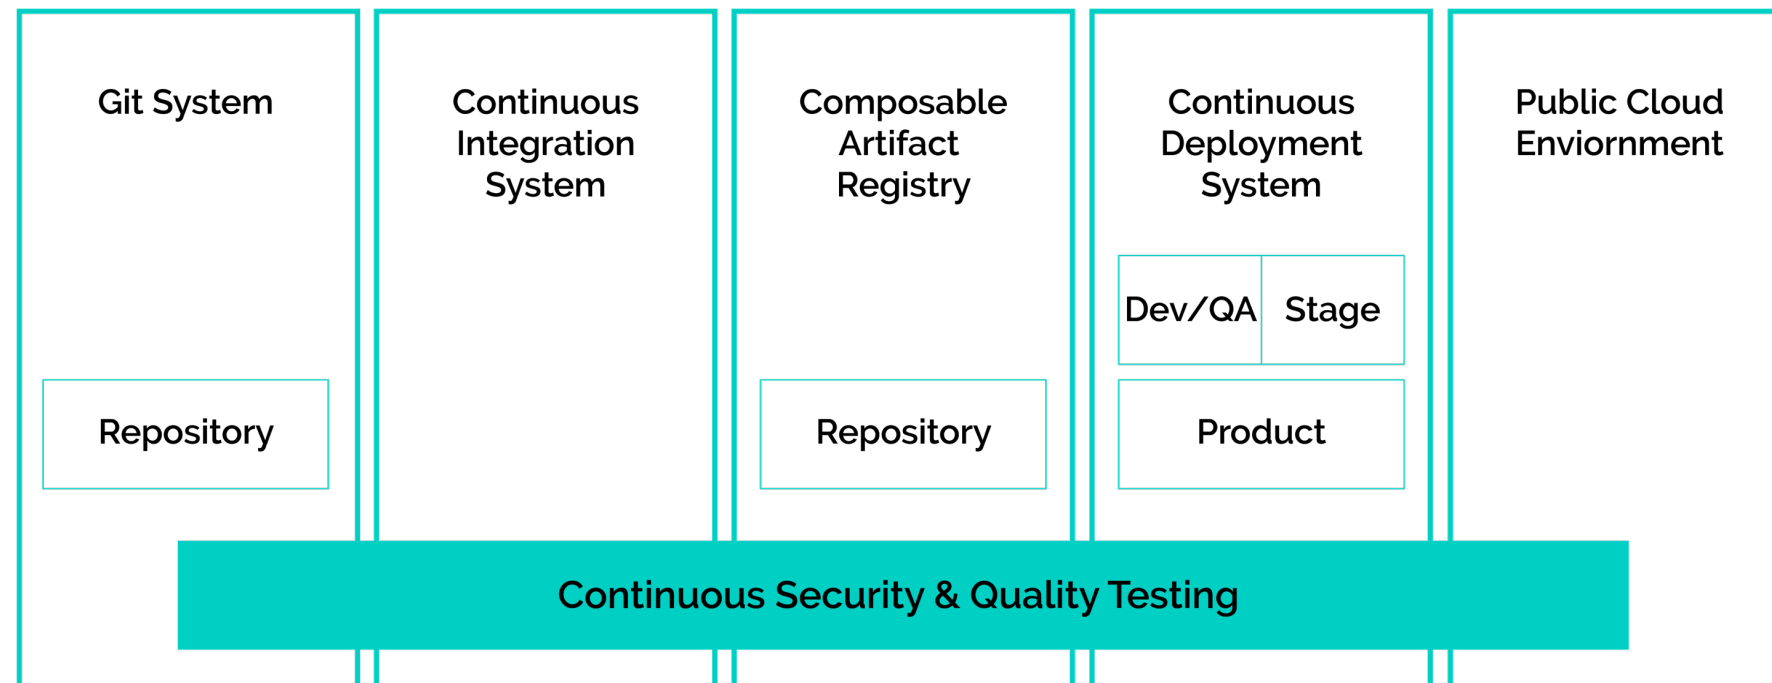

Your landing zones are built with the correct pre-settings, workflows, and technologies to ensure it is scalable and secure. Using our pre-sets, building your landing zones takes weeks instead of months. Once complete, you can easily clone, and scale as needed.

BENEFITS

- Go to market with speed
- Scale your environment with user volume and business needs
- Security governance logic ensures your data is safe
- Secure network connections to ensure encryption and communication between networks is secure

DevSecOps Accelerator

- ▶ We enable your team to deliver to the market consistently and with speed.

We build full end-to-end DevSecOps capabilities, including automated continuous integration/continuous delivery (CI/CD) pipelines. We will build the environments you need - from QA, Dev, Production, etc - per your requirements using our pre-defined frameworks.

BENEFITS

- Efficient software development and delivery
- Improved quality assurance and application security
