AZURE PICKLE

Preserve your digital estate with a secure, scalable and cost-effective disaster recovery solution on Azure.

Fully managed Disaster Recovery

Azure Pickle is our fully managed disaster recovery service that leverages Azure to provide everything you need to preserve your digital estate and keep your business running, no matter what.
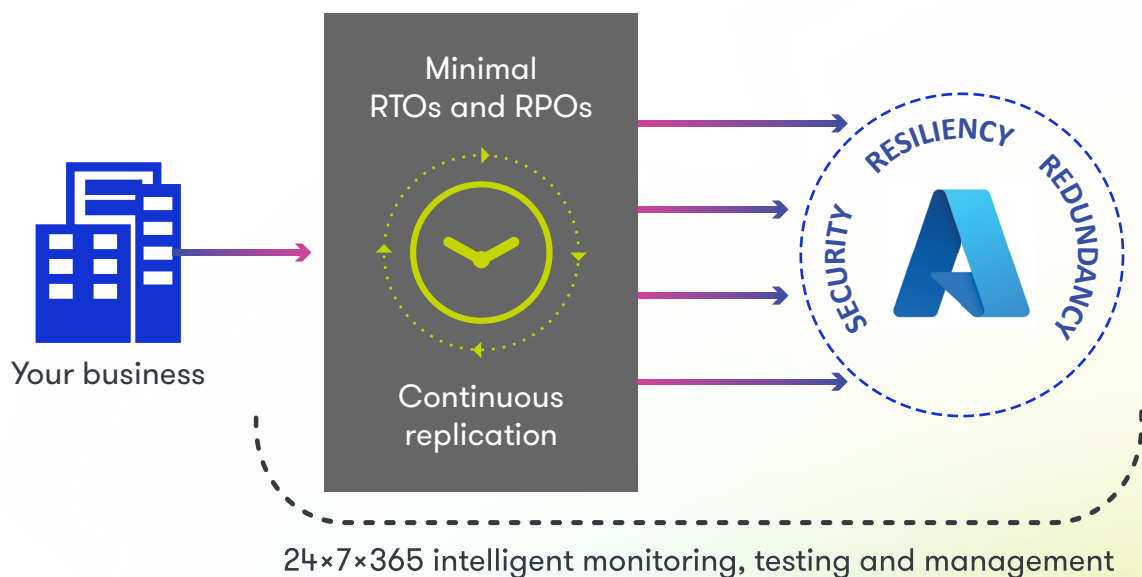

Eliminate large upfront costs and scale as you need while handing all of the testing and management over to us, for a dependable solution that you can rely on 24×7×365.

On-premises to Azure

Safeguard your data against major IT outages as well as accidental or malicious deletion, without the need to invest in complex on-premises recovery solutions.

Azure to Azure

Leverage the unlimited scalability of Azure, along with its unrivalled security, performance and high availability, while offloading maintenance and monitoring.

Your business

Minimal RTOs and RPOs

Continuous replication

RESILIENCY
SECURITY
REDUNDANCY

24×7×365 intelligent monitoring, testing and management

How we work

Artefact Review

We'll work with you to fully understand your requirements through a process of business and technical analysis.

Estate Rationalisation

We'll divide your workloads into dependent and independent groupings, their priority for migration and their appropriate DR target.

Methodology Design

We'll identify your RPO and RTO requirements for each grouping to ensure all elements are covered without assumptions. This also includes what testing is required or could be viewed as viable for IT policy or audit purposes.

We'll design and agree appropriate recovery methodology for each grouping. The common methodologies include:

- Azure Site Recovery
- Infrastructure-as-code
- Build ahead resources (e.g. Virtual Networks)
- Resource specific replication (e.g. Azure SQL Failover Group)
- Customised replication (e.g. Logic App trigger data replication)

Enablement

We'll implement and configures all elements as detailed in the design steps while ensuring zero risk or commercial impact to the existing environment.

Cost efficiency

Cost has always been a concern when it comes to public cloud. Azure makes this as efficient to deal with as possible with services like Azure Advisor and Cost Management. However, the design of the environment relative to licensing and commitments can drastically make a difference to cost. Your MSP should ensure that all avenues for cost savings are explored and actioned if suitable.

Testing

Full testing will be carried out with any potential technical outcomes captured via documentation. We will also provide a proof-of-execution for any systems required and included in testing.

Documentation

The final step is to capture the as-built detail of the footprint and present it back for sign-off. This is a technical document that outlines the implementation and configuration of the DR components.

Managed support

The Azure Pickle service provides a fully managed Disaster Recovery Replication to an Azure Cloud subscription, whereby in the event of a disaster, services can be recovered to the DR site.

With this service, you can be assured that your critical production systems are protected, monitored and documented so that they are ready for a fast, tested orchestrated recovery in a time when your business needs an immediate response to a disaster, backed by industry leading RPO and RTO SLAs. In addition, we also provide regular managed disaster recovery testing, in line with your business and compliance requirements.

Service benefits

Simplified management

Our fully managed disaster recovery solution will help protect and recover your physical and virtual systems against accidental deletion, security threats and disaster events. We'll also perform regular testing to validate processes and ensure your organisation can fully recover data and restore critical applications following an incident.

Fully secured

Using Azure's multi-layered, built-in security controls and unique threat intelligence, we'll safeguard your data against both deletion and cyber threats.

Cost efficient

By offloading your disaster recovery to eir evo, you can reduce the costs of deploying, monitoring, patching and scaling your own disaster recovery solution.

Push button recovery

Our fully managed disaster recovery replication and recovery service will ensure your critical IT systems stay protected against serious events while hitting your RPO and RTO targets.

Scale to your needs

Readily available, Azure VMs can be provisioned at the touch of a button to quickly meet your business needs with all of the necessary resources available on-demand.

eir evo Managed Services: You're in safe hands

eir evo Managed Services for Microsoft Azure is built upon a 30-year proud partnership with Microsoft. As one of Ireland's only Microsoft Expert Azure Managed Service Providers, we pride ourselves on best practice methodologies and deployment tools that drive quick deliverables across our full Managed Service offering, backed by our ISO 27000 and 27001 accreditations.

Consultative-led approach

Through our consultative-led approach, we will be able to determine the exact disaster recovery plan for your organisation, so that you can protect and recover your IT.

Regular testing

By testing regularly, we can guarantee an effective solution that provides full availability while meeting your RPO and RTO objectives, for minimum disruption.

Scale as you need

Scale coverage to as many business-critical applications as you need, backed by eir evo expertise and support.

Global support

With offices in both Ireland and New Zealand, we'll monitor and manage your environment 24×7×365.

Our Partnership with Microsoft

For more than 30 years, eir evo has prided themselves in being recognised as a key strategic Microsoft Partner in Ireland. Our unrivalled expertise, experience and broad skillset within the Microsoft product portfolio has established us as leaders in the planning, design, implementation and management of Microsoft solutions and services.

Over a decade ago, we created a dedicated Microsoft Practice within our business, which is now one of the largest in the country. Today, we are the only solutions provider in Ireland to offer true end-to-end service delivery.

Why choose eir evo?

Microsoft Partner of the Year 2022
Our Country Partner of the Year award confirms eir evo's ability to deliver the highest level of competency, experience and proficiency in Microsoft technologies for your business.

Azure Expert MSP
eir evo is one of Ireland's only Microsoft Azure Expert MSPs.

Highly certified
We're one of the few Irish partners to hold several Microsoft Advanced Specialisations, which are all aligned to our solutions.

Trusted expertise
At eir evo, we have invested heavily in our Azure capabilities, guided by Azure Practice Lead and Microsoft MVP Joe Carlyle.

ISO certified x 2
We have successfully developed a mature Azure Managed Service offering which is based on the ITIL framework and backed by the ISO 20000 and 27001 certifications.

Ireland's leading cloud services provider
Our years of experience mean we understand where you're coming from, and where you need to get to, while following the best approach for your business.

eir evo

Our unrivalled portfolio of services leverages the latest technologies across cloud, cyber security, networking, infrastructure, connectivity and more. Through this, along with our people, innovation and expertise, we drive technical freedom so you can evolve and grow your business.
