EdgeXperience Capture Service, a robust SaaS offering built on Microsoft Azure platform and available on the marketplace, gives businesses a new choice in document scanning and enables resilience in times of recovery and opportunity. This new cloud-enhancement techology empowers both local and remote workers with more efficiency and productivity, allowing then to adapt to changing demands. Architected for scalable growth, the EdgeXperience's powerful online tools reduce deployment and adoption costs.

EdgeXperience
Capture Service

Line of Business

Increased Employee Efficiency.   The overall scan process including ease of use, placement, collection, and authentication into backends is much accelerated over more traditional scanning operations.

Vertical and Horizontal Scalability.   Vertically, the organization can handle changes in paper work loads without changes and delays in IT infrastructure. Horizontally, with Wi-Fi and Ethernet connectivity the fi-7300NX scanner can be deployed anywhere in a few simple steps.

Speed and Agility. EdgeXperience shortens time to market by lowering deployment times, increasing the frequency of releases, accelerating recover times and removing geographic barriers.

Increased Innovation.   Delivery to new cloud services, tools, and ecosystems can be done in a fraction of the time of more traditional deployments.

Information Technology

Centralized Management.   Professional web interface allows for simple and uniform change across the entire organization.

Reduce Support Cost.   Not only does SaaS provide datacenter optimizations, but it eliminates PC installations, trainings, and on-going support tickets create an immediate savings and return on investment (ROI) for every organization size.
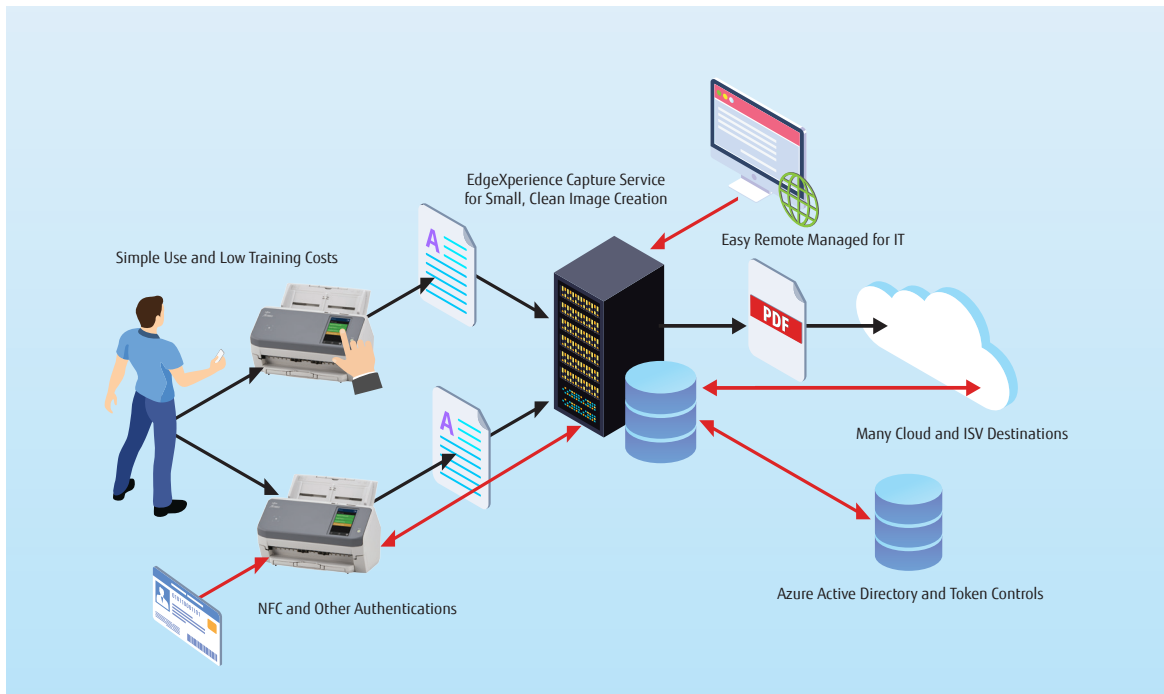

Resilience & Recovery. Cloud allows businesses to maintain vital operations and quickly overcome disruptions, protecting both your business and customers.

Project Acceleration. For IT, supporting the internal LOB customers is accelerated via improved cloud migration and fast, secure connectivity to a variety of destinations.

EdgeXperience Capture Service

How it works

1. Subscribe to EdgeXperience Cloud Service on Microsoft Azure Marketplace
2. Configure authentication, job groups, and job buttons to cloud destinations
3. Connect your Fujitsu fi-7300NX scanner via the front panel
4. Place paper in and scan

Destinations & Options

We also have on-premise and virtual deployment options.   Current destinations include email, SharePoint Online, OneDrive (Personal and Business), Amazon S3, Azure Blob, and electronic fax with more available soon.
