

Azure Sentinel Onboarding Assessment - 5 Days

CGI

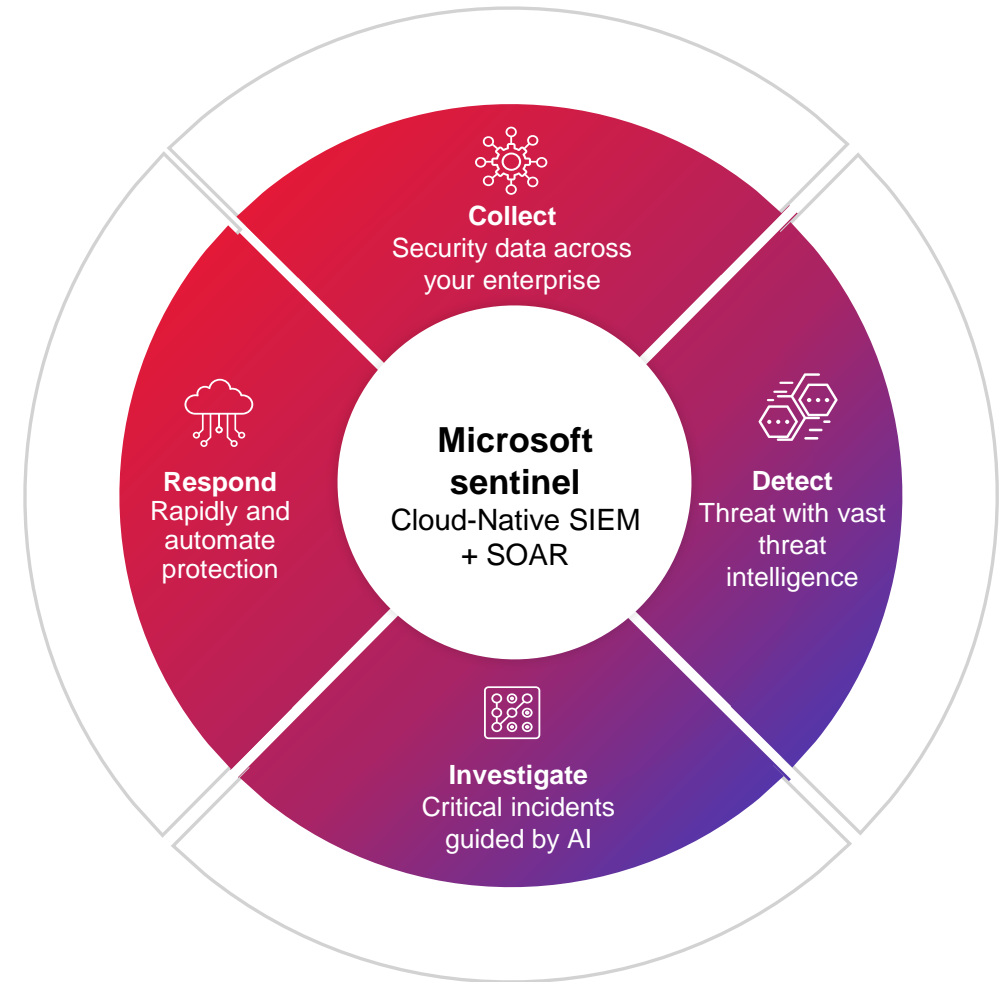

Azure Sentinel Onboarding Assessment

Azure Sentinel Onboarding assessment – Review your cloud landscape and design how to implement Microsoft Sentinel in your environment using Microsoft's best practices and CGI's extensive knowledge of large cloud environments.

Azure Sentinel Onboarding assessment Deliverables:

- Customer environment current state analysis
- One CGI led customer workshop to review the current state analysis
- One CGI led customer workshop to plan the Microsoft Sentinel Onboarding
- Documented Sentinel target state in customer environment
- Project plan and work estimates for the the Microsoft Sentinel Onboarding

Azure Sentinel Onboarding Assessment

Cyber security landscape is constantly evolving and the very essence of good cybersecurity is continuous improvement. Microsoft security tools are evolving with new features continuously and Microsoft Sentinel is one of the key components to keep your environmental information centrally available for the cyber security team.

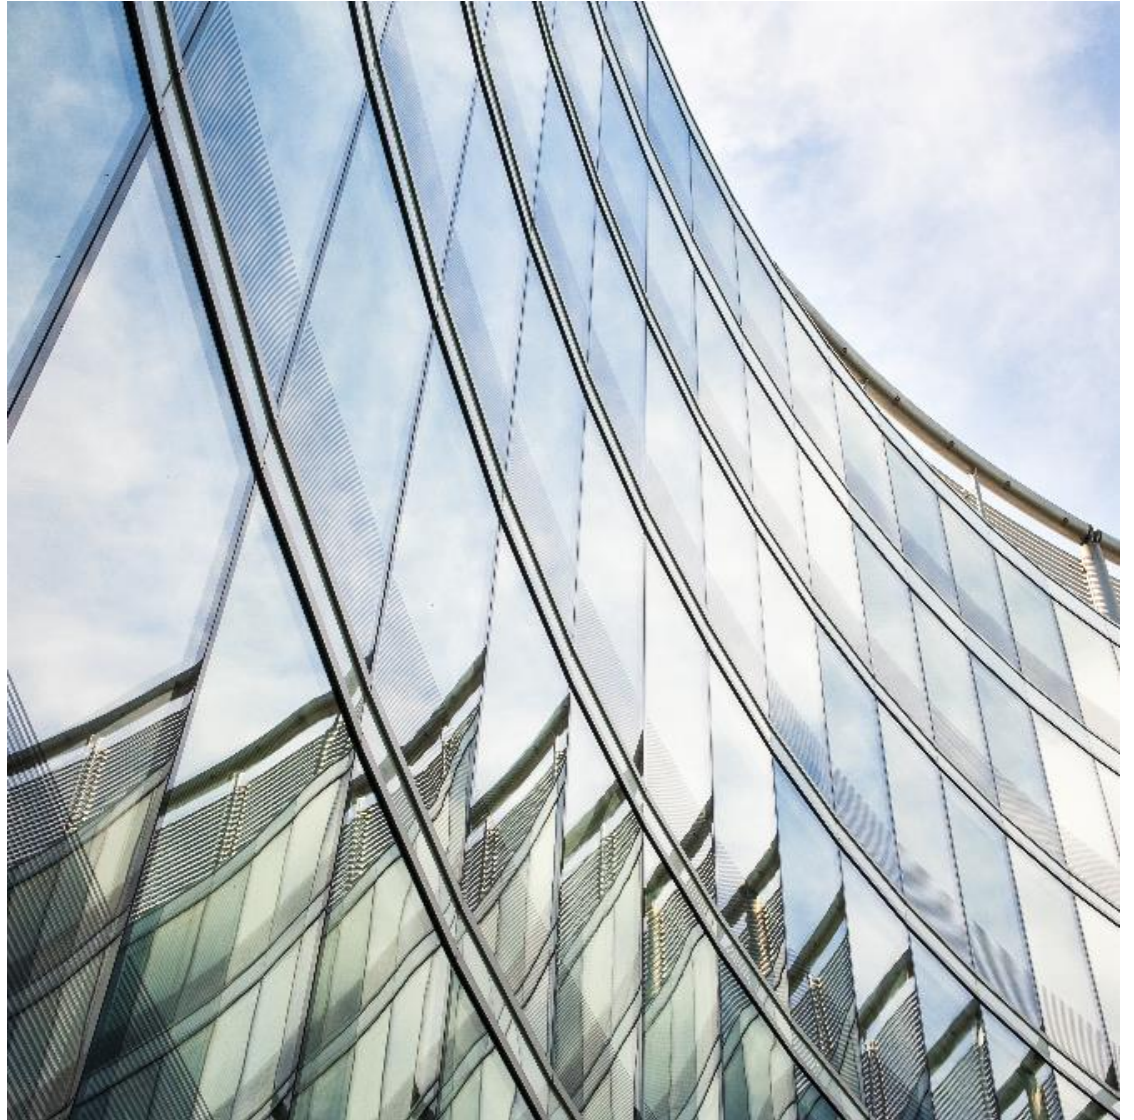

Microsoft Sentinel is a scalable, cloud-native, security information and event management (SIEM) and security orchestration, automation, and response (SOAR) solution. Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for attack detection, threat visibility, proactive hunting, and threat response. As you can see, Microsoft Sentinel offers multitude of capabilities to help your cyber security team to gain further insights into your environment, but how should you implement Sentinel in order to get the best possible outcome from the tool?

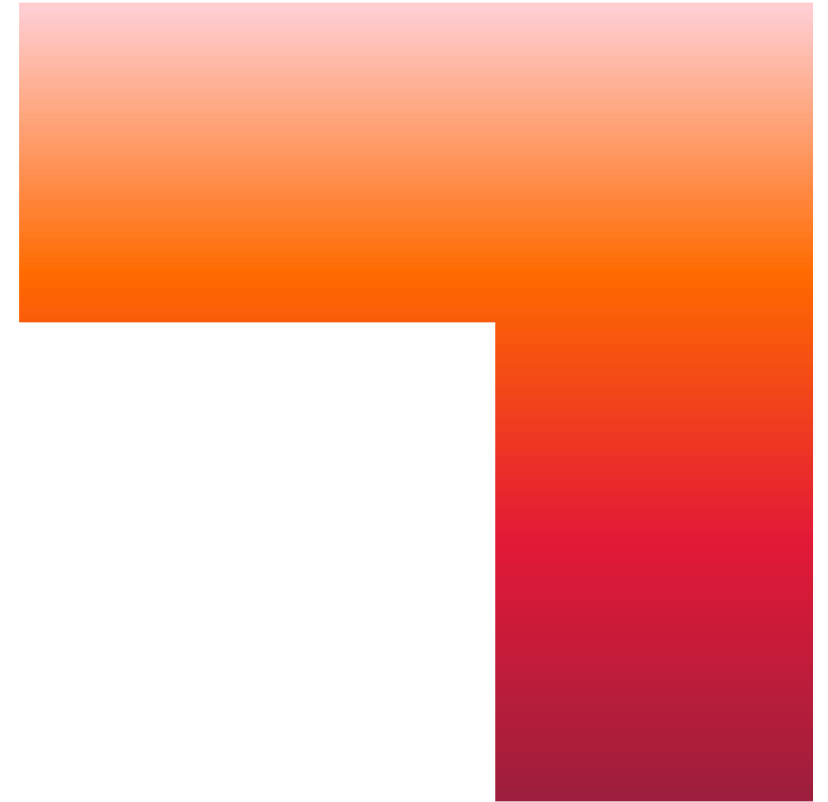

Onboarding Assessment: 5 Day Assessment

As a complimentary service, CGI will analyze your environment to gain understanding of your current security capabilities and log sources. Based on this information, CGI will arrange two workshops, where we will first go through the findings and feedback to the Microsoft Sentinel. The planning of the Microsoft Sentinel onboarding covers the Microsoft recommended best practices and the plan is created according to customer environment specific requirements, where cost-optimization is tightly integrated in the design and plan.

After completing the workshop, CGI will finalize the Microsoft Sentinel onboarding plan together with detailed timetable and work estimates for the onboarding project.
