Extend SAP with Microsoft Power Platform

BEST PRACTICES, PROOF OF CONCEPT & POWER PLATFORM IMPLEMENTATIONS

Learn how to extend your existing SAP system with Microsoft Power Platform's innovative tools and low-code approach. Break down silos and extend your core processes.

Expertise from a single source – enjoy Reply Group benefits!

Consulting, training and development with ❤️ made in Germany within the  Reply Group.

SAP is probably the best-known, established ERP system in which the core processes of numerous companies are mapped. However, customizing SAP is not only time-consuming (costly), but can only be done by IT specialists – and with a shortage of skilled workers. However, specialist departments need processes that dock onto SAP and are not covered by core processes. This is where the Microsoft Power Platform comes in.

Extend your SAP System

- Develop a spoke app strategy and extend your SAP core processes with apps and workflows that **leverage potential goals in individual departments**.
- Build apps in an **end-to-end low-code approach** – similar to PowerPoint and Excel - in a managed, secure environment on the Microsoft Power Platform.
- Are you also having **trouble finding professionals** to write ABAP and JavaScript? Not anymore! We'll show you how the business departments can also get involved as part of Citizen Developers!
- Create apps that have a perfect and **state of the art design** and layout. Integrate your existing enterprise design easily through components and the innovative Figma integration.
- **Avoid complex and error-prone setup efforts** of SAP Fiori. Instead, configure the Microsoft Power Platform and extend it with the wide range of innovate and democratized features, such as AI Builder and workflows.
- Microsoft is the world champion in **native integration** of purchased services – SAP is known not to be. SAPUI5 / Fiori and its architecture is again detached from the actual SAP ERP. Why not go with Microsoft then?

Unlock Business Value Immediately

Individual Automations for the Business

Individual processes of different departments are not necessarily core processes of companies and do not always belong in SAP. Create individual and tailored applications and automations for your department in no time!

Prioritize Your Important Work

Don't burden your workday with dull or error-prone tasks. Focus on the work that is most valuable and value-added through your subject matter expertise. Have tedious work done for you.

Look Forward To Familiar Controls

Every day you work with Microsoft technologies. On the Microsoft Power Platform you design processes individually and innovatively – but at the same time in the familiar Microsoft environment. Fast onboarding guaranteed!

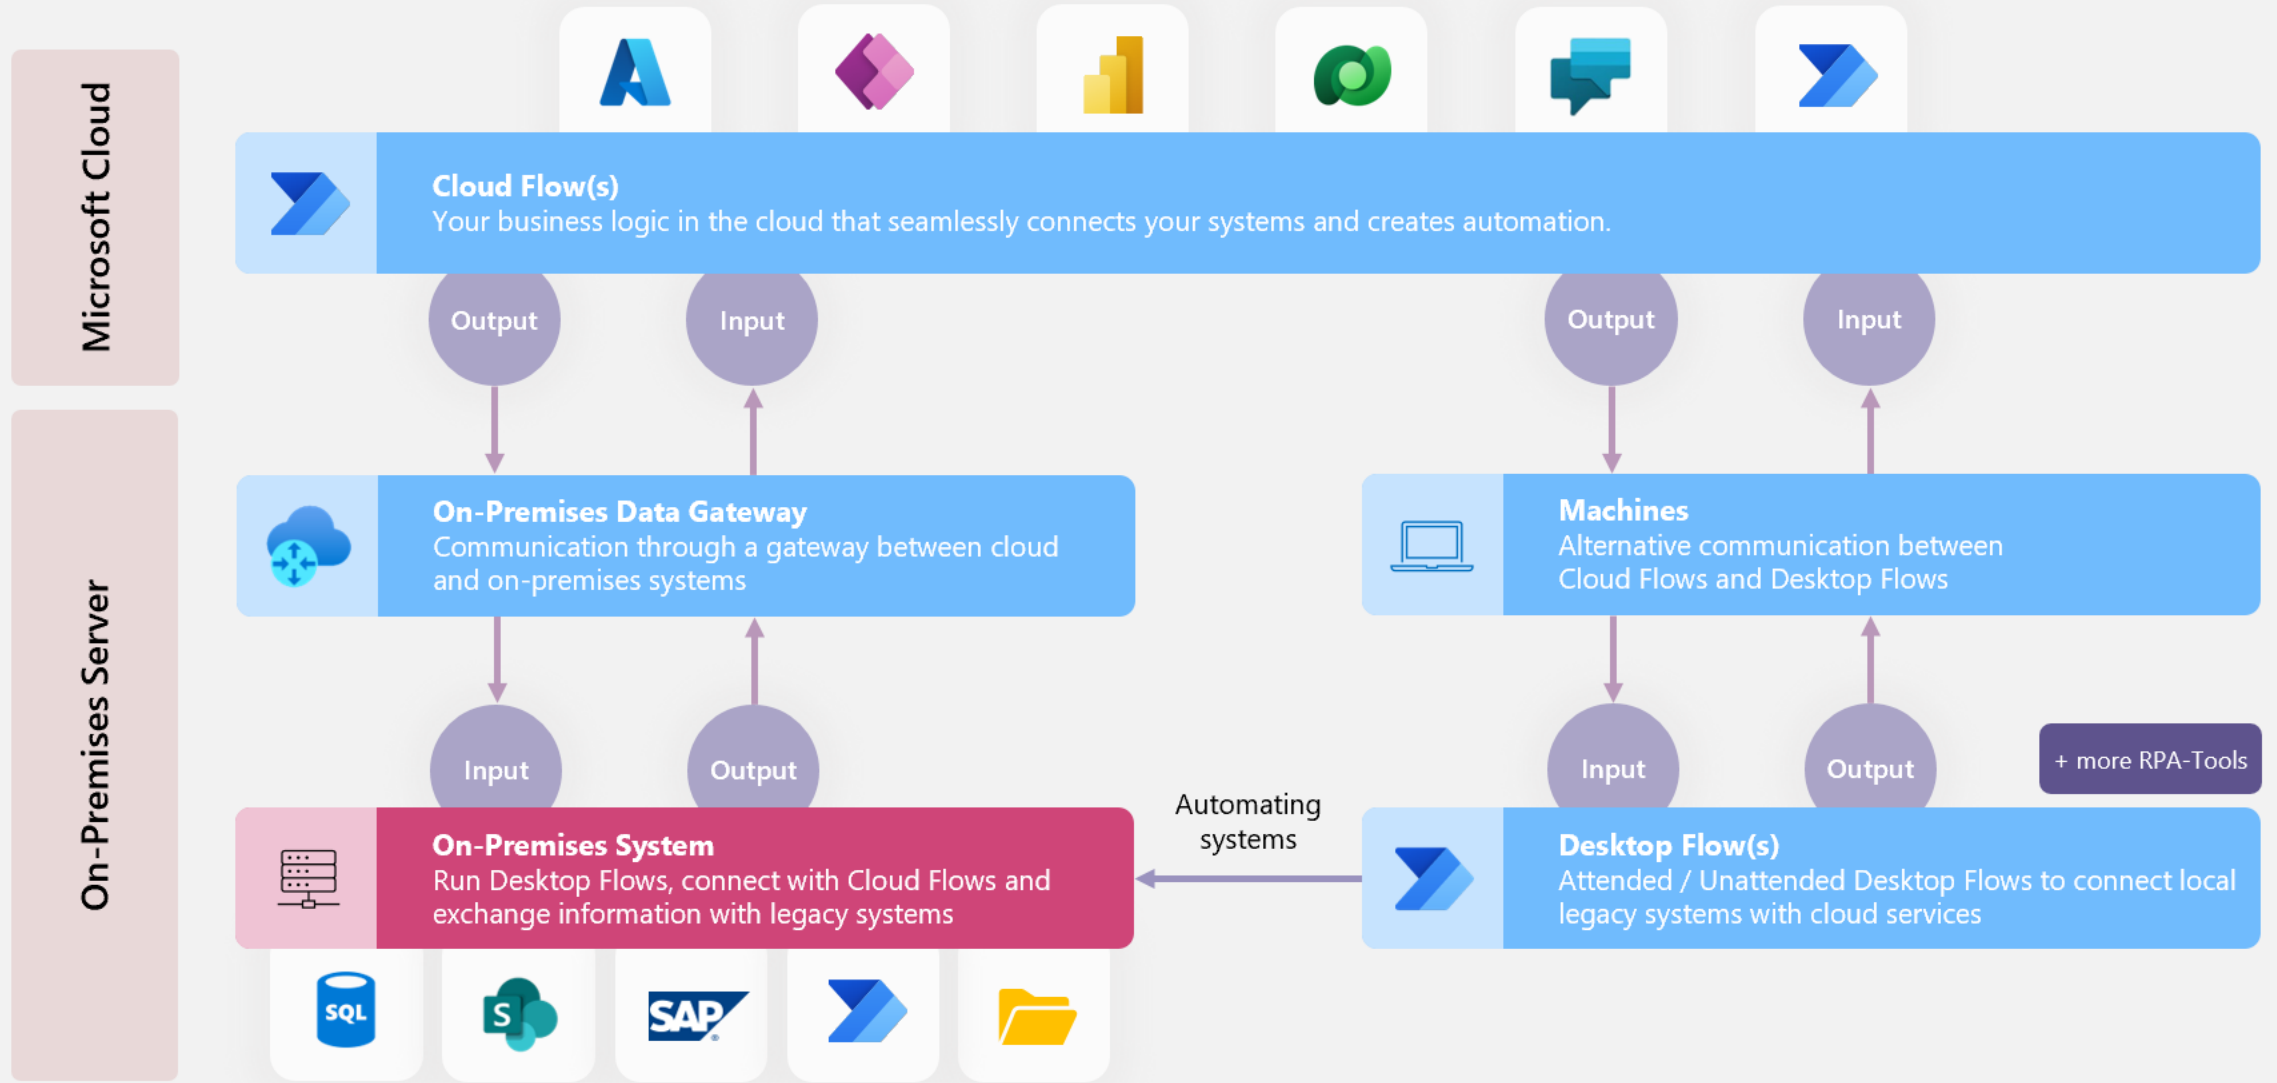

Lightning Fast Through Low-Code / No-Code

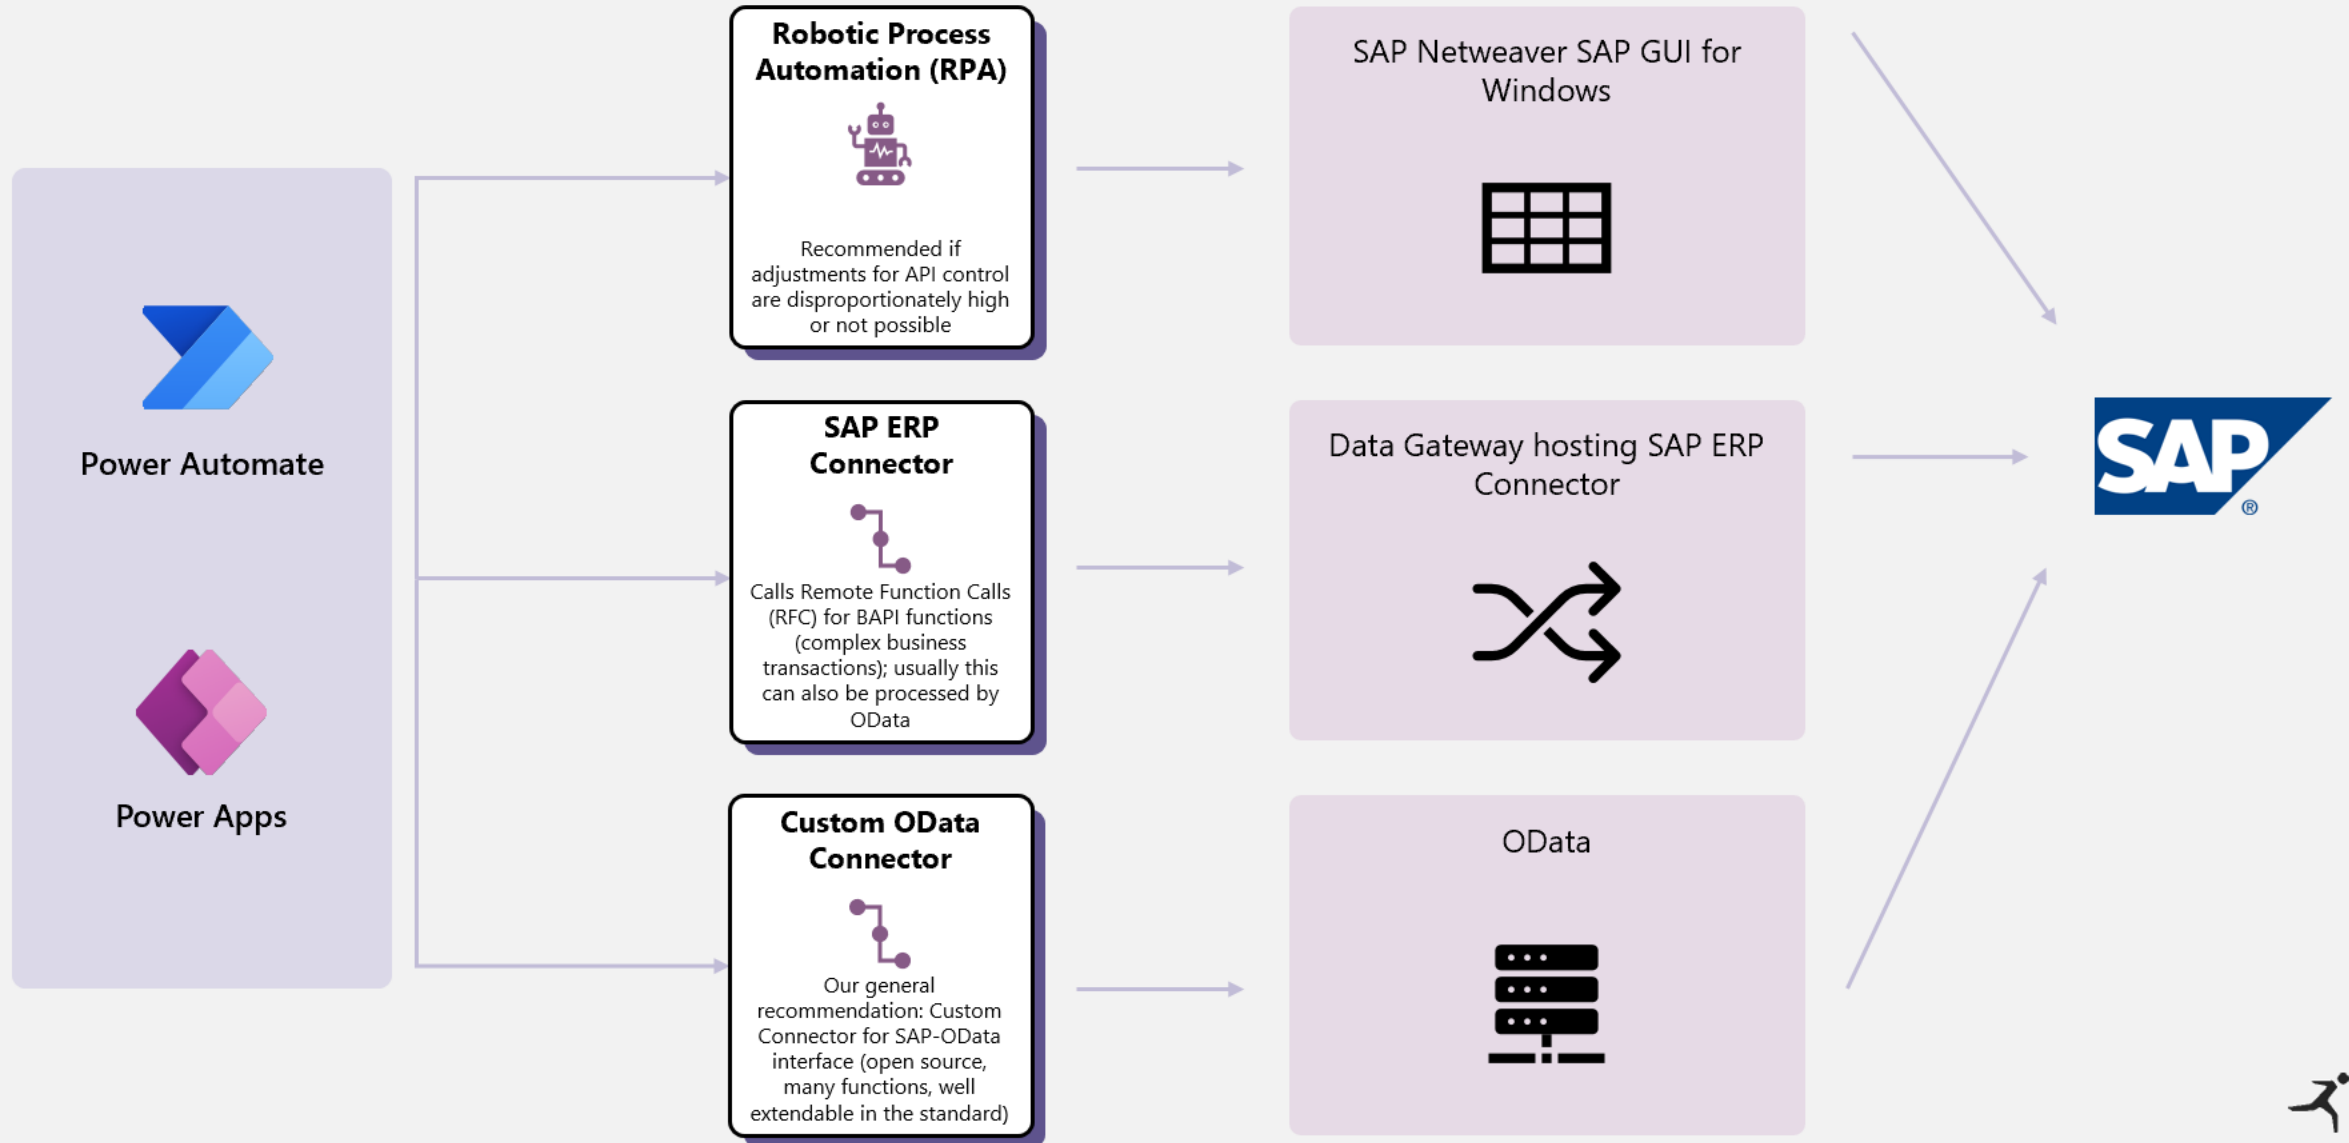

Relieve your IT department and rare SAP specialists. Democratize app development through low-code and aligned governance.

Cloud Connection for Legacy Systems

Access Control to Central Legacy Systems

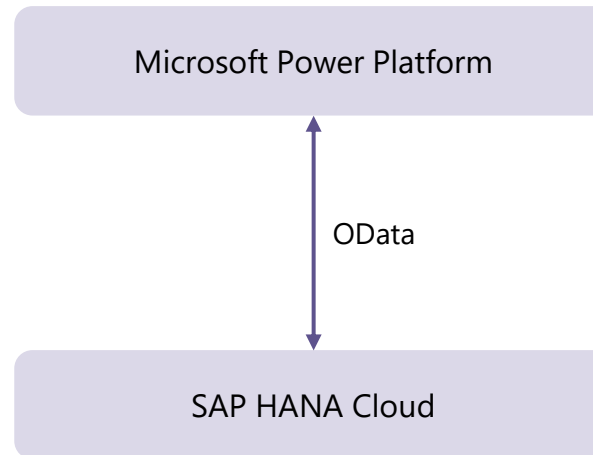

SAP On-Premise vs. Cloud – Which API?

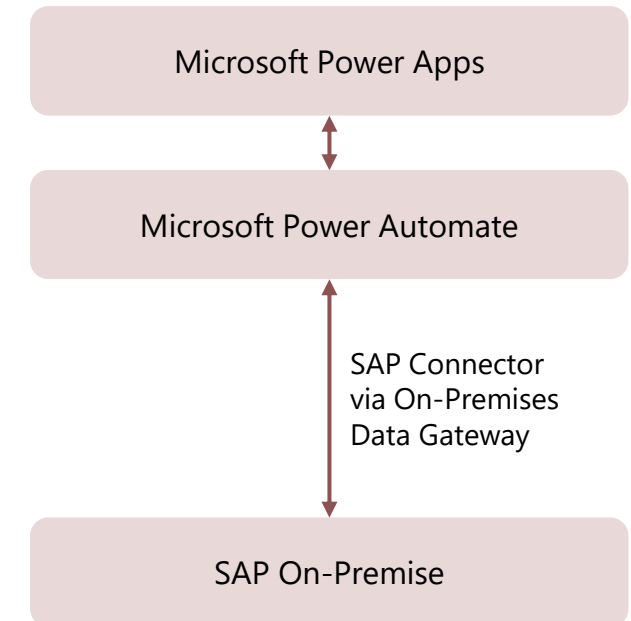

1 Capabilities

- SAP already offers more than **1,300 standard APIs** (info in [SAP Business Hub](#))
- In addition, **custom interfaces** can be created via the SAP Cloud Integration Suite
- The Microsoft Power Platform offers **native connectors** to SAP (BAPI functions with RFC calls) and the possibility of native connectors to OData services.
