TCS Cloud Transformation (Cloud Migration and Modernization) Execution Services- 8-12Weeks

TCS Cloud Transformation (Cloud Migration and Modernization) Execution Services provides orientation on how TCS will work with the customer and deliver the migration execution based on Cloud Migration Factory.

TCS Cloud Migration Factory facilitate end-to-end orchestration of cloud migration & transformation activities for our enterprise customers. The factory-based migration execution strategy comprised of multiple Assembly lines, on various migration streams like Low Touch, High Touch and Modernization based on complexity.

Typically, the TCS Cloud Migration Factory leverages built-in accelerators, frameworks, and combined expertise over the last few years to seamline the movement of workloads and overall governance activities for migration.

For migrations, TCS Cloud Migration Factory integrates natively with Azure as well as third-party tools along with integration with ITSM and Azure DevOps for task-level governance and automated execution of migration activities.

TCS Cloud Migration Factory brings pre-defined templates for common migration patterns as task lists, test cases and templates for task automation using tools like Azure Boards for scheduling and tracking migration tasks, Azure Pipelines for deployment tasks and Azure Test Plans for test case management. For migration governance and reporting, customized dashboards are made available to customers to track and monitor real-time statistics on migration activities and completion status.

Take advantage of our briefing session to explore the business and technical benefits of the solution and get a proven path to unlock its benefits for your cloud adoption journey.
