Microsoft Purview Data Security Quick Start

Workstream

Outcomes

1 **Discovery & Design**

Discovery and analysis of data in a client M365 tenant, identification and interview of priority stakeholders, development of data security requirement definitions, and develop data security control design specifications.

2 **Data Classification**

Delivery of an initial configuration in production for data classification requirements for classifying sensitive data at rest in the M365 cloud

3 **M365 and Endpoint DLP**

Delivery of an initial configuration in production for data loss prevention of data in motion in the M365 cloud and managed endpoints

4 **(Optional) MDCA Detection**

Delivery of an initial configuration in production for preventing data loss of sensitive content in non-Microsoft cloud storage locations

5 **(Optional) Data Classification On-premises**

A deployment of AIP Unified Scanning for on-prem content stores and configuring client-side labeling with O365 apps.

6 **Monitoring and Support**

Monitor and produce data risk analytics by content sensitivity, activity, and traffic. Define an M365 Data Security Operations plan for ongoing tuning and response workflows
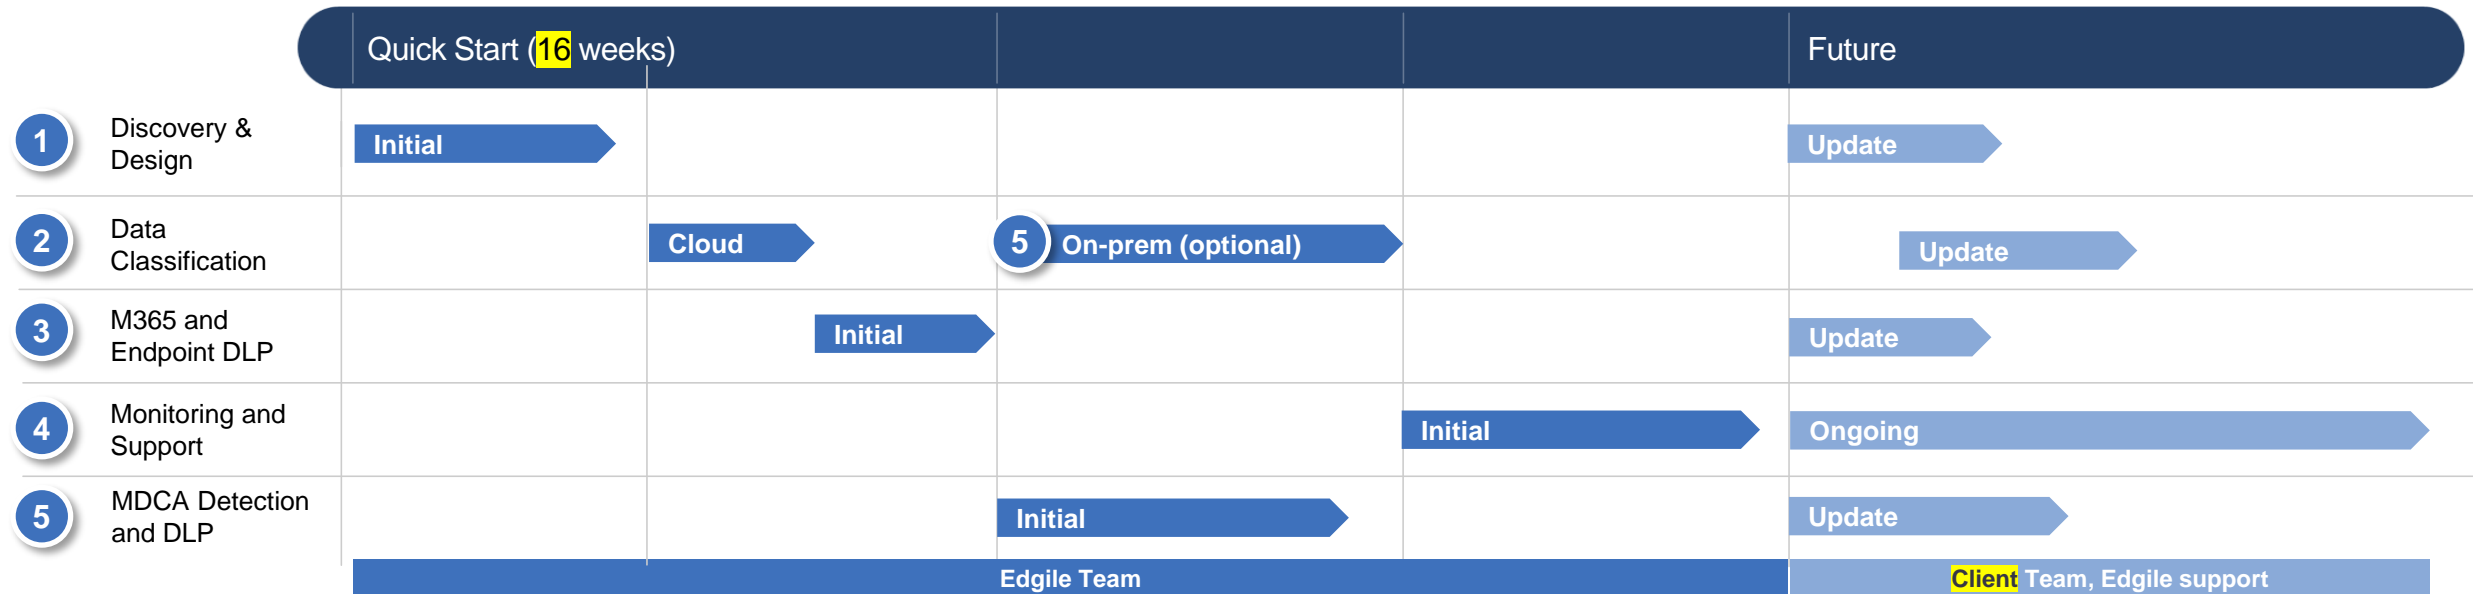

Microsoft Purview Ecosystem
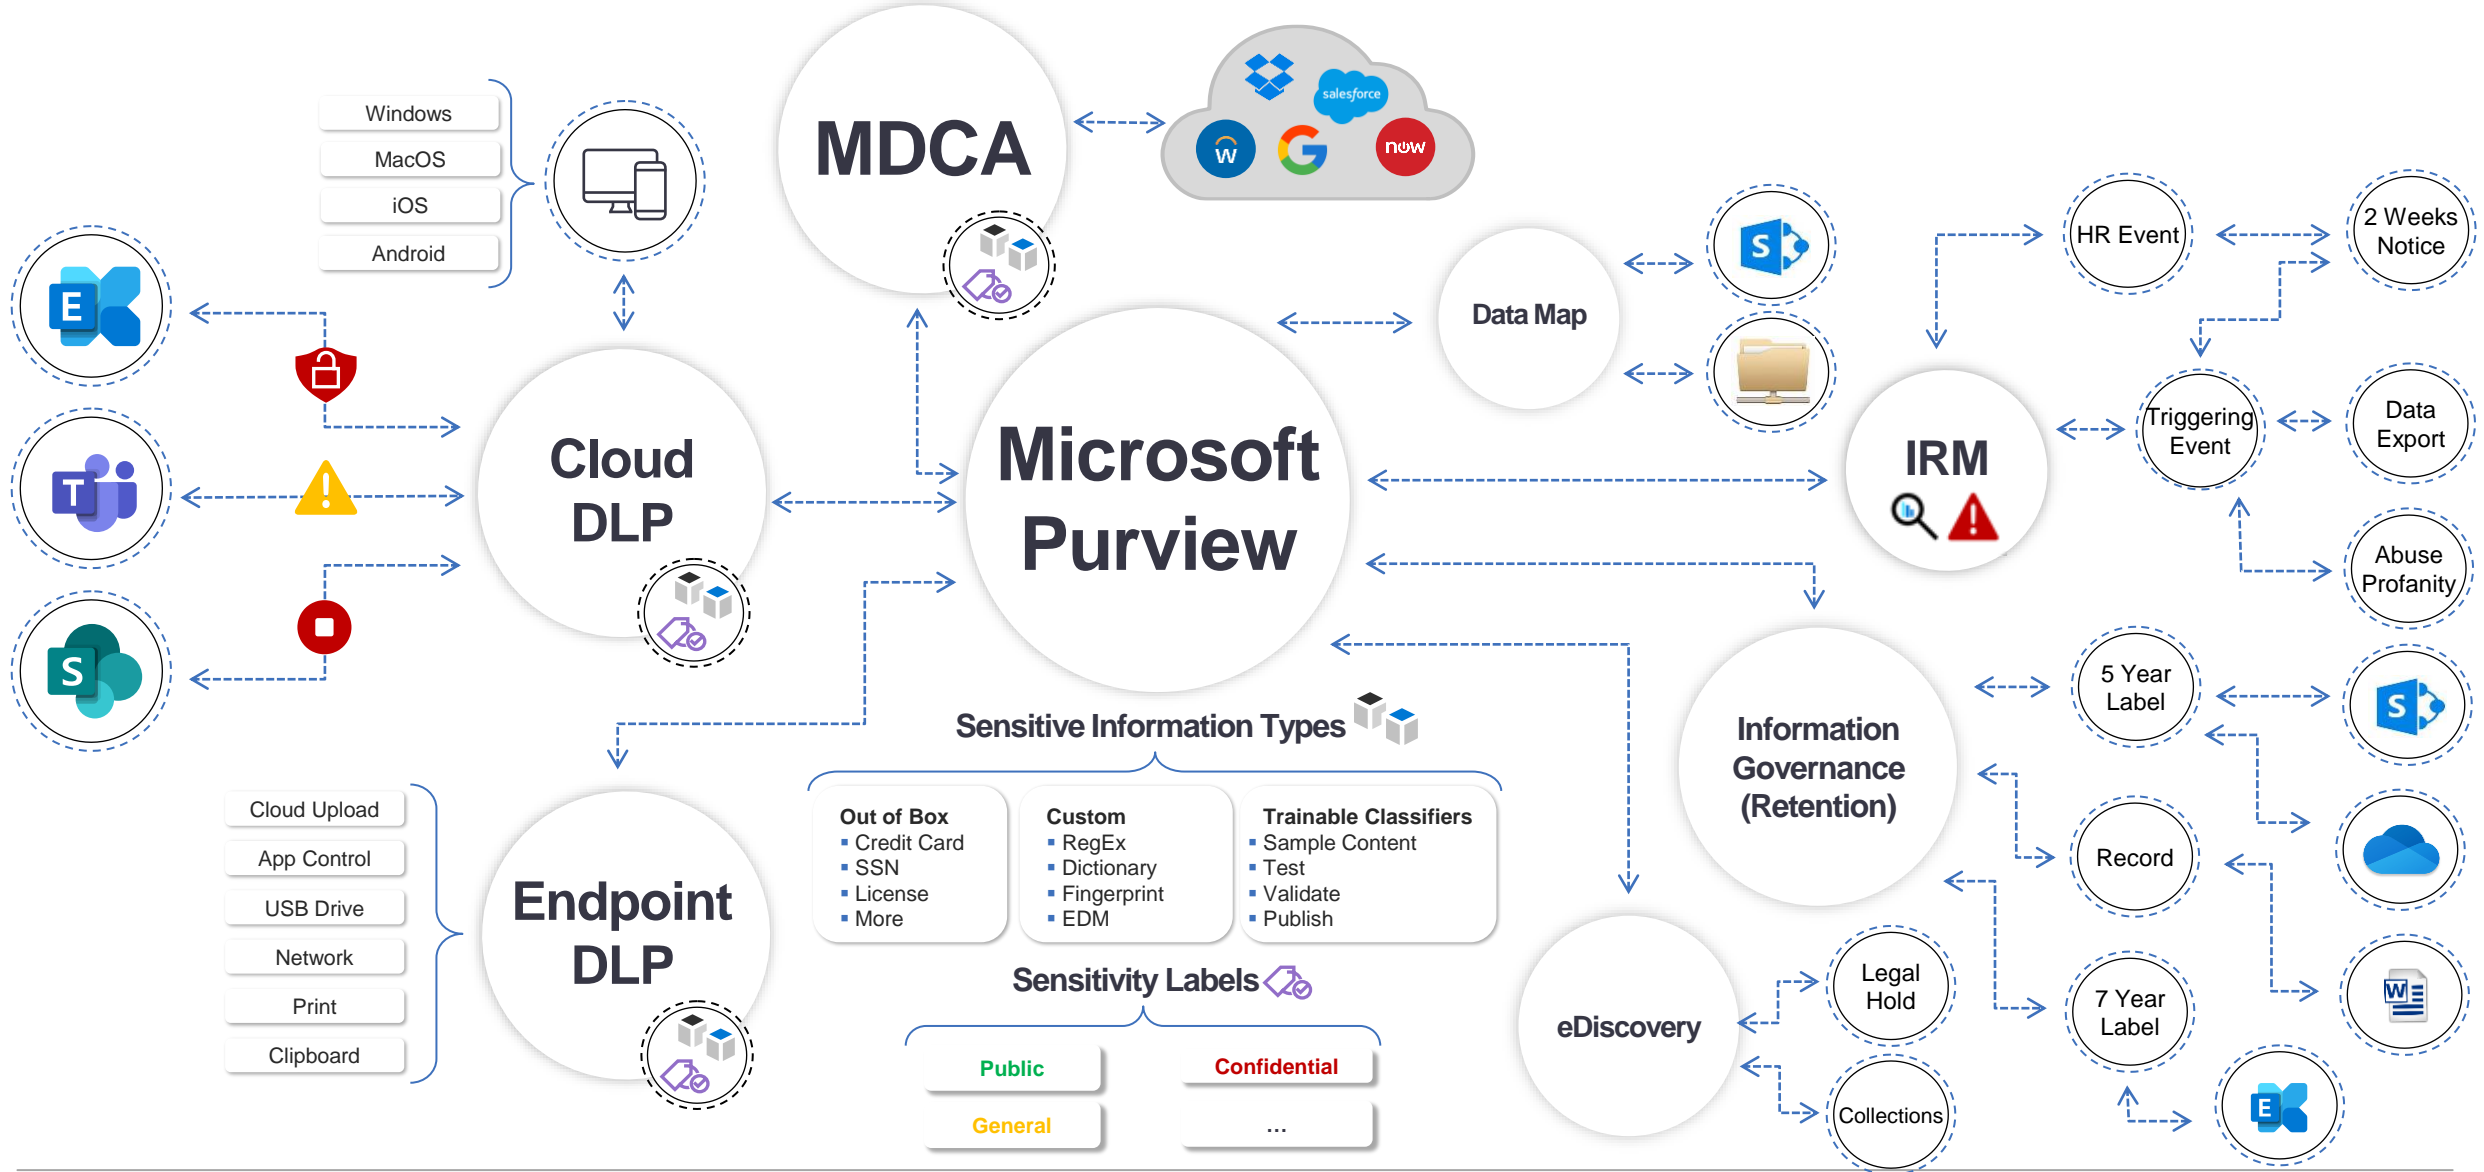

Multi-cloud & hybrid protection in Microsoft Defender for Cloud

Google Cloud
