JDE Partnership & Collaboration

Our Proprietary Tools and Accelerators

iLinkSM

Pre-built adapter to provide synchronization of master data between Cloud products (PDH, CPQ) and JD Edwards E920

ProDartSM

ProDart provides functionality to compare and document Processing Option and Data Selection values across instances or environments on the same instance

*ProVueSM

Specialised E1 application monitoring solution. Built for E1, but with customizability and flexibility to suit your environment

AutoSetSM

Pre-defined Excel templates with import and export functionality, Master Data, Opening Balances and Open Orders programs

MineJDESM

A process mining offering to provide data base insight of customer business process and helps in identify and prioritize areas of improvement

Automation First

Smarter Services

*AutoPackSM

Automate your project promotions, package build, and deployments. Built using the E1 toolset – Faster SDLC – Bring in CD/CI to your E1 instance

ImpactaSM

Proprietary upgrade assessment tool with features to identify, categorize and estimate customizations into standard, clone or custom objects

ESU ImpactaSM

ESU Impacta provides an automated approach to analyze ESUs impact by providing the details on the impacted objects, retrofit estimates and testing scope

VerGenSM

VerGen provides features to generate versions based on an excel input or synchronize Processing Option, Data Selection or both based from a template version

ResPasSM

Simplified and user friendly E1 password resets. Free up your service desk resources for more crucial tasks

Faster Results

*Oracle Validated Integration Tool
