

Prototyping & UI/UX Design for Power Apps

DESIGN WORKSHOP AND IMPLEMENTATION – COMPANY-WIDE UI/UX OPTION

Unify UI/UX of Power Apps and Dynamics 365 through centralized design repositories – including the Figma integration and AI-powered Express Design in Canvas Apps.

We identify, develop and advise. What are you waiting for? Ask the Power Platform experts!

Consulting, training and development with ❤️ made in Germany within the  Reply Group.

Infinite Possibilities

1 Challenge

- Employees and Citizen Developers **enjoy creating Power Apps** with innovative features 😊
- Corporate Identity (CI) **design guidelines** are often not followed
 - No adaptation to Power Apps
 - Lack of design knowledge
 - Missing templates and guidelines
- App users can only identify with intuitive solutions and a **harmonious app landscape**
- No standardized processes established for designing power apps

2 Solution

- Collaboratively develop **standardized processes for creating Canvas Apps**
 - Valuable experience and best practices from Reply
 - Company specific ideas and processes
 - Identify opportunities in terms of user interface (UI) and user experience (UX).
- Joint design of a design repository that reflects the corporate identity (CI)
- Optional: collaboration with design experts from the Reply network

3 Advantages

- Employees identify with apps and enjoy using Canvas apps
- Access to centralized design components through app makers, including Citizen Developers
- Centralized management and updating of design components
- Scaling through standardization
- Guaranteed user-friendly, intuitive and innovative apps

Design Process

1 Scenarios

- Identify the application scenarios and form factors
- Typical **application scenarios** are:
 - Standalone
 - Embedding in Microsoft Teams
 - Embedding in Dynamics 365 or Model-Driven Apps
- Different form factors may need to be handled differently
- Responsive design may play a role

2 Components

- Identify required components
- **Typical components** are:
 - Components that will be reused (multiple screens, multiple apps)
 - Header incl. company logo
 - Footer
 - Fold-out side menu
 - Standardized galleries (list views)
 - Modules, e.g. Excel import by copy & paste
- Components differ in part depending on application scenario and form factor

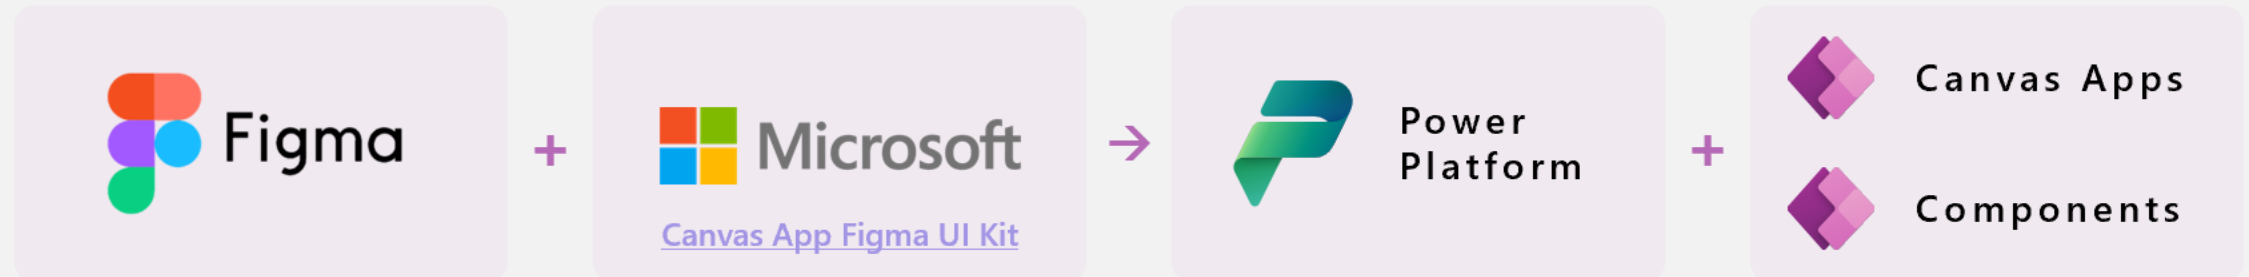

3 Development

- Combining your Corporate Identity (CI) and Power Platform
- Designing the components through prototyping
- Checking for the existence of suitable PCF components
- Consideration of colors and shapes of your company, if applicable based on existing guidelines
- Deployment and test procedures
- Creation of a company-specific developer guide for the deployment of components

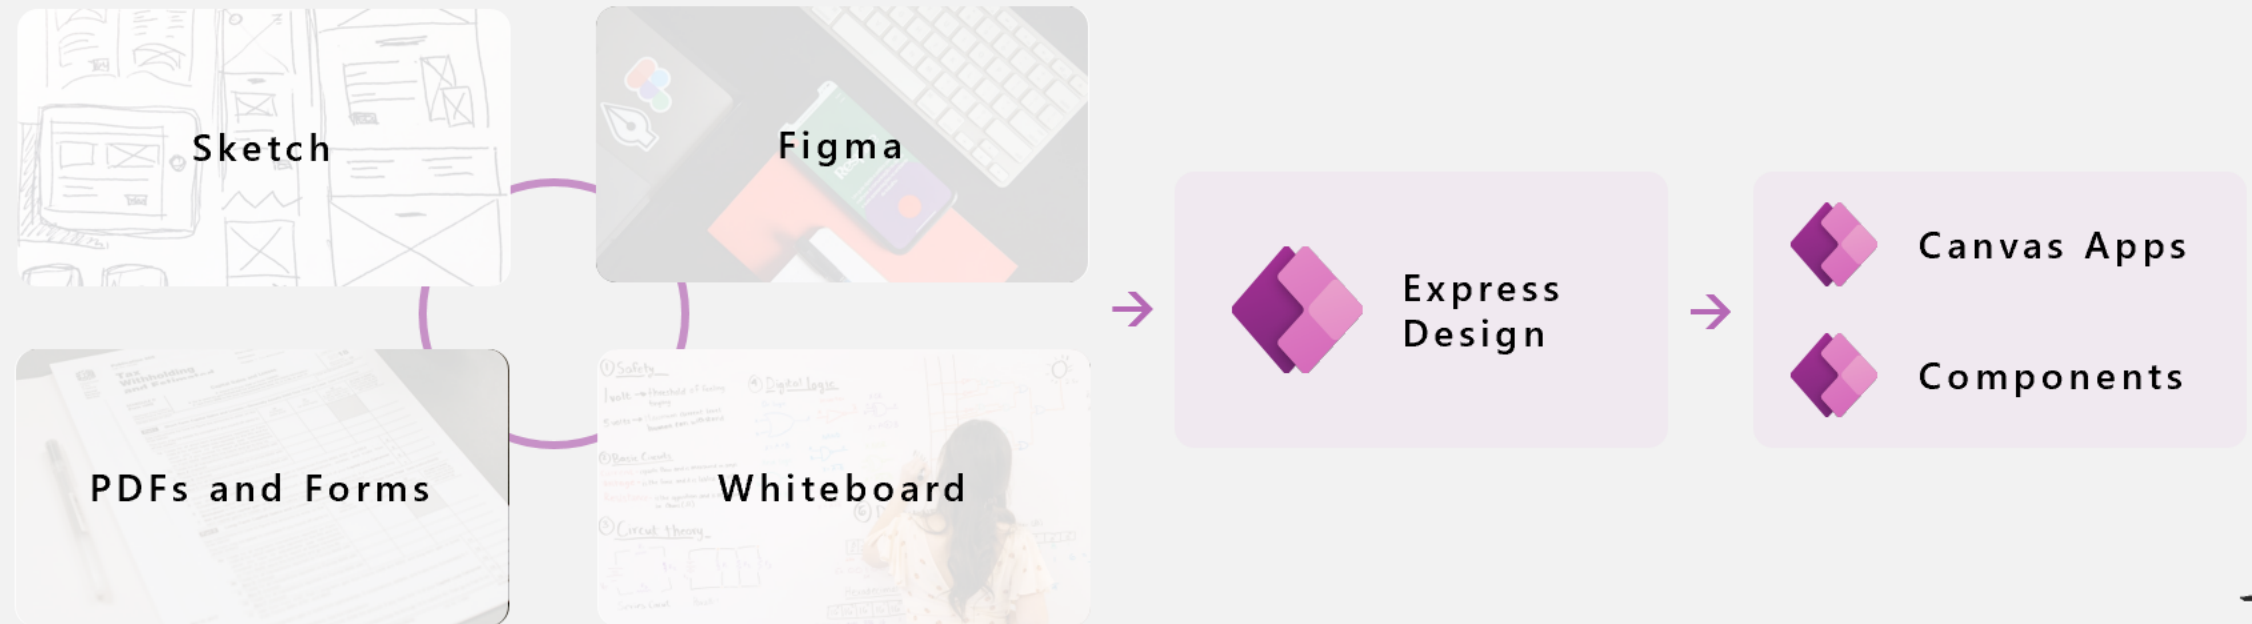

Hook Up With Professional UI/UX Tools

- The new  Figma integration provides Microsoft Power Apps with a **professional, globally established collaborative interface design tool**.
- Quickly create a central **design repository, mockups or click dummies** – maybe even already based on existing design patterns of your Corporate Identity (CI) or by a transfer and creation by our design experts in the Reply network.
- A design and workflow in Figma is often also a great starting point for a use case to be implemented **as part of a hackathon** (feel free to ask us).
- Transfer Figma design elements into the Microsoft Power Platform – either directly into Power Apps (direct use) or into components (like templates) that can be deployed centrally in the Microsoft world.
- Integration lets all your apps shine and **solves key and typical challenges** that come with adopting a low-code platform.

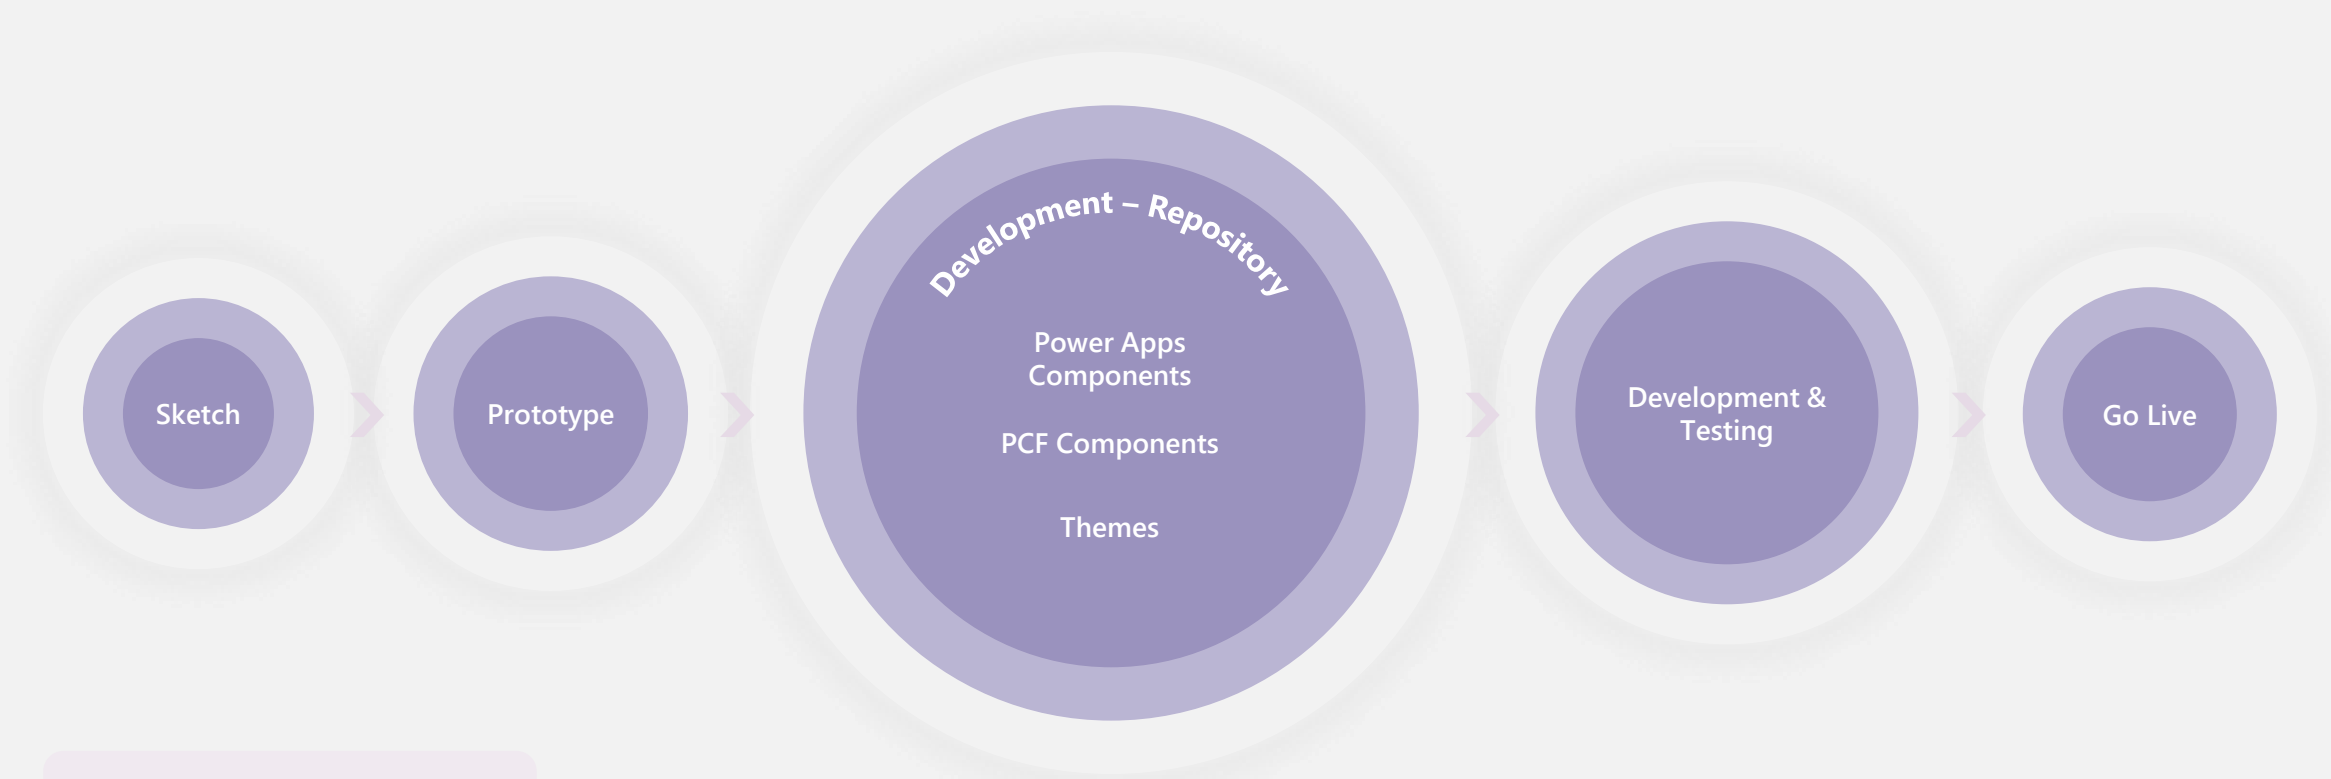

Start With Your Sketch On Paper

- Express Design takes **AI-powered low-code app development** to a new level.
- Jumpstart your app development: **Transform existing design artifacts and visuals** (paper sketches, whiteboard, Miro, Figma, more) **directly into a working app** – including a professionally set up data model in Dataverse!
- We love hackathons - and you? Express Design often makes a great entry point for Citizen Developers to implement use cases, for example in a one-to-two-week **hackathon** (ask us).
- Apps can be easily customized through Power Fx (low-code functional language). We are happy to support you with our customized trainings from our extensive training catalog, e.g. **Citizen Developer Training** (ask us).

Design Process & Development

Centralized design repository based on components that can be updated

What are you waiting for?

- Do you want to **evaluate** a project?
- How do I **digitize and automate my processes** with the Microsoft Power Platform?
- Do you need **best practices** and hands-on support from our motivated experts?
- Do you have questions about **opportunities** with Microsoft Power Platform?
- How do I organize **governance and compliance**?
- What makes the **Power Platform particularly fast** to work with?
- How does **democratization** play into your hands and how can I start with **envisioning** and business value assessments?
