

# SAP S/4 Show Home Launchpad

## The challenge

How do I validate my cloud and SAP S/4 business case without the long build times and with real data?

I can't commit to a £m+ S/4 transformation programmes before validating the functional business case, it's just makes is a non-starter.

### Reference model to guide

An empty S/4 instance doesn't help, I need a working company model that can show working processes, reporting & persona based UIs with example data.

### Rapid Prototyping

I need access to a prototyping system for my Business Process Owners to analyze S/4 functional benefits using real company data.

### Performance and security concerns

I have concerns about cloud performance, security and connectivity which require validation testing.

### Long build times

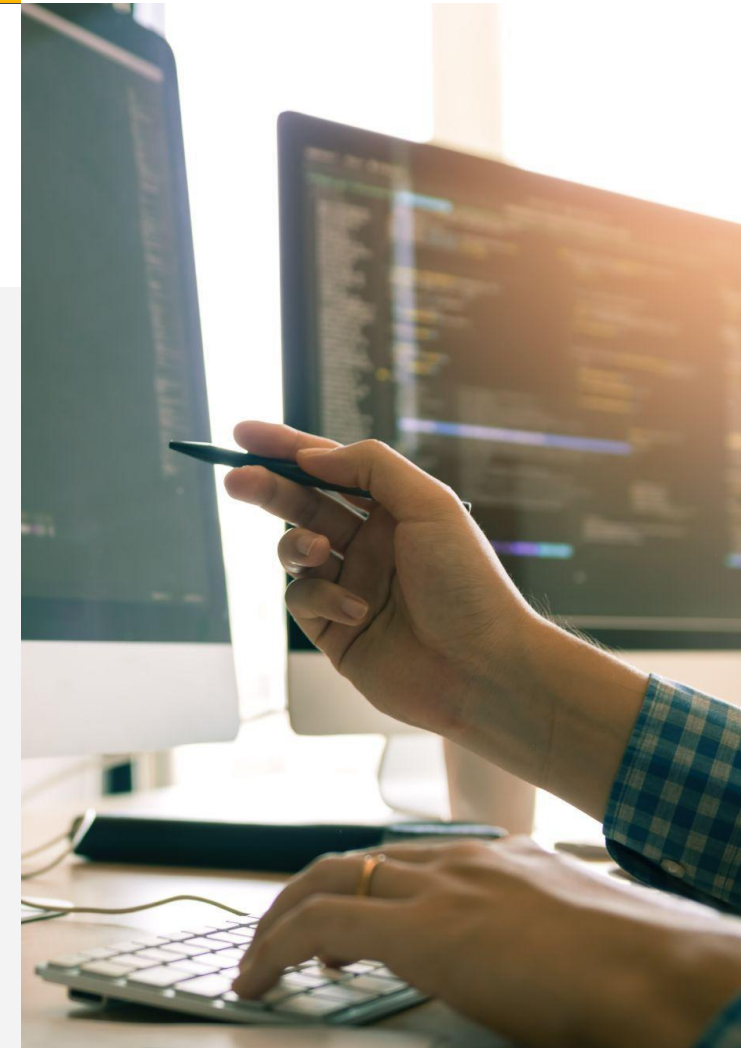

SAP Build times are taking too long and I need a project & POC sandbox in days to keep my project moving.

### Skills to help validate

My organization doesn't have the skills yet to create a private, secure, monitored & usable S4 prototype system.

# The solution

Validate your cloud and SAP S/4 business case with a fully functional “Showhome” accessible in under 48 hours...

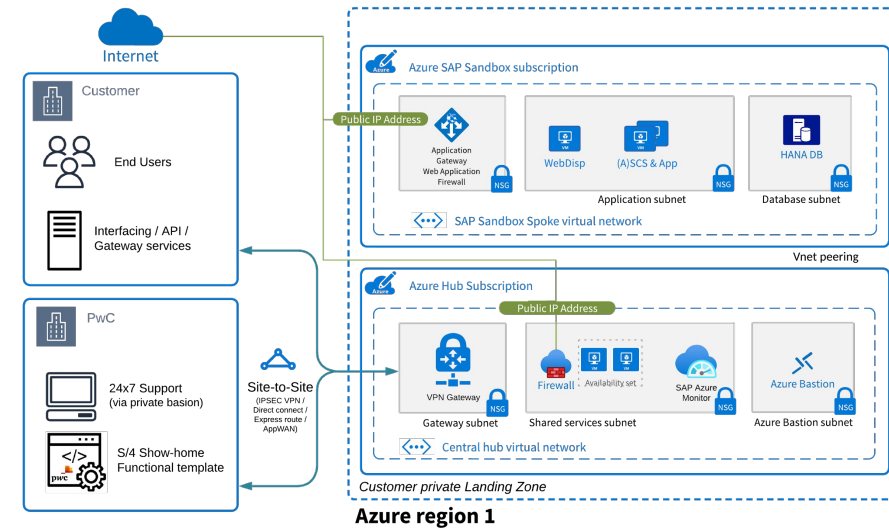

## Validate your cloud and SAP S/4 business case with a fully functional “Show Home”

Our Industry “Show Home” enables you to engage your teams on what the future will look like using SAP S/4HANA. We will leverage PwC’s Industry Templates and Azure Launchpad to accelerate the early build of the solution, providing the platform and mechanism for enterprises to answer the complete business case.

- ✓ Azure SAP specific LZ deployment
- ✓ Security Framework (Network, OS & Cloud)
- ✓ Site 2 Site connectivity options
- ✓ Media Storage
- ✓ SAP Backup Management
- ✓ PwC Cloud Automation orchestration leveraging Hyperscaler native tooling
- ✓ BYOL license or leverage Demo & Test PwC license.
- ✓ Automated S/4 deployment.
- ✓ PwC Show-Home S4 template deployment ready for S/4 transformation validation

## Key benefits

- 1 Clarity on where simplification and standardisation for your company processes.
- 2 Richer conversations on scope, and design choices using your company data.
- 3 Driving your S4 system early to validate your business case early, a real vs paper based validation.
- 4 Rapid deployment of an Enterprise scalable, secure out the box Azure Landing Zone with OS and SAP images are built to NIST standards as standard.
