Azure Operation Pack
Windows Server

With over 750 specialists, our skills and competencies are truly diverse. We can help on several fronts, such as IT outsourcing and cloud services. Every company is different, but IT Relation always starts with the same primary consideration: the business. What challenges do you face? What are your objectives, your ambitions? Once these have been delineated, we can talk about the best way to release the potential for growth in your business.

Our offering
Companies today are confronted with a challenge of balancing security and IT resources with demands for remote work. Enabling secure and scalable access to corporate resources can help you keep business moving forward.

Challenge
Installation and maintenance of the infrastructure for the delivery of Windows server / Linux server, we will provide a well-functioning server environment based on fixed and recurrent operating, monitoring, and Patch Management routines.

Solution
With the Service Azure Operation Pack - Windows Server, the Supplier performs based on one or more customer-specific operating procedures the operation-related tasks that may be in connection with ensuring that the Service is functional and accessible.

Advantage
Azure Virtual Desktop is the only solution that allows for a Windows 10 Enterprise multi-session. This means that there can be several users on the same session host which allows for large savings with scalability options by only paying for the consumption.
