# Microsoft Intune

Combining cloud-based management and security features to empower users to be secure and productive on any device, anywhere.

- Intune is a cloud-based service that focuses on mobile device management (MDM) and mobile application management (MAM).

- Intune provides one console for complete management of all device types: Android, iOS/iPadOS, macOS and Windows 10 devices.

- Intune enables deployment of multiple app types, including Microsoft 365 suite.

- Intune integrates with Azure Active Directory (AAD) to control who has access, and what they can access.

- Intune provides secure and controlled access to company data.

Why our clients decide to implement MEM Intune

➢ Integrated mobile device and app management …

➢ Secure data and applications

➢ Simplified device onboarding

➢ Easy update mangement

➢ Optimized IT cost

Dedicated but standardized SII approach for Intune implementation:

Concept Proposal
Proposed deployment concept based on requirements analysis

Project Plan
Project / action plan

Workshop
Workshop to define Customer Expectations

Environment Setup
Proof of Concept setup / Showcase

Maintenance & Support
Steady state suport of the environment

Pilot/Production Rollout
Go-Live - Final service deployment to production

Customer Acceptance
Agreement of all the stakeholders on the successful deployment of the project.

Implementation & Testing
Finetuning of the existing configuration and Customer testing.

See how Sii can simplify management of your mobile devices with Intune

Get to know multiple benefits of implementing the tool

Integrated mobile devices and apps management

Intune enables the deployment of multiple app types, including the Microsoft 365 suite and provides one console for complete management of all device types: Android, iOS/iPadOS, macOS, and Windows 10. We will show you how with its help to:

- Automate enrollment options for all corporate devices
- Install mandatory apps
- Deploy device security policy settings, restriction policies, and feature settings
- Get remote assistance and audit of any device

Secure data and applications

Intune safeguards company data across PCs, phones, and tablets, helping you maintain control over corporate data and apps on personal devices. Our experts will present its functionalities allowing you to:

- Restrict access to corporate resources
- Protect data by regulating certain actions outside of managed app ecosystem
- Monitor device and app compliance
- Prevent data leaks if a device is stolen

Simplified device onboarding

In Microsoft Intune, an automated and zero-touch enrollment method is available for all operating systems: Windows Autopilot, iOS Apple Business Manager, and Android Enterprise. We will explain how by utilizing deployment automation you can reduce IT effort, facilitate user self-enrollment, and enhance user productivity quicker than before.

Optimized IT cost

We will help you reduce infrastructure and IT costs by moving from classic IT management to modern cloud IT, which includes single sign-on and self-service password reset, automatic update control, and more.

What you get

- **Certified Microsoft Partner**
  offering advisory & support

- **Dedicated expert team**
  of implementation consultants and engineers

- **24/7 support of L2 specialists**
  upon request

- **Standardized implementation process**
  for existing and new environments

- **Reduced IT effort**
  thanks to simplified and automated processes

- **Increased productivity**
  with single sign-on and self-service solutions

Tangible Benefits / Desired Outcomes

✓ You take care of your business development - we take care of the cloud

✓ Our architects will support you in the latest technologies

✓ We are ready to maintain your infrastructure with dedicated support team
