Microsoft Defender for Endpoint

A unified endpoint security platform for prevention, post-breach detection, investigation, and response.

Microsoft Defender for Endpoint is a complete security solution powered by the intelligent cloud that protects endpoints from cyber threats, detects advanced attacks and data breaches, automates security incidents, and improves security posture. It offers a rich set of APIs to build integrated solutions. Security and data privacy are the priorities of the platform.

Agentless and cloud-powered – built into Windows 10, requires no deployment or infrastructure; Always up to date.

Unparalleled optics - built on the industry's deepest threat insights and shared signals across domains enables synchronized defense and faster response.
Automated security - out of the box automation enables security teams to go from alert to remediation in minutes—at scale.

How Netskope integrates with Microsoft Defender for Endpoint

Netskope is able work with Defender to ensure that one solution has confirmed as valid attack indicators, both know – reducing the time to respond to sophisticated attacks launched against or from endpoint or cloud resources. Netskope does this by automatically exchanging indicators of compromise with Microsoft Defender for Endpoint on a periodic, as-configured basis. Shared indicators include malicious URL, IP addresses used maliciously, and malware file hashes. An additional reduction in the attack surface is brought about by detecting and acting on the presence or absence of the Defender endpoint software for policy decisions, dial the amount of cloud and data access based on the protection posture of the endpoint.

CUSTOMER BENEFITS

- Defense in depth: Reduce the likelihood that of either platform failing to neutralize an attack

- Automation: Enable orchestrated sharing of indicators without adding work to SecOps teams.

- Zero Trust: sharing indicators and dynamically pivoting security postures delivers continuous conditional access to sensitive cloud resources
