

CONSEIN

Adology

Facilitate the use of Microsoft Teams adoption. Integration of various Microsoft 365 tools as if they were pieces and not individual solutions.

Challenges

- Little use of the investment on its collaboration platform. The ignorance of the platform solutions results in the expense of other similar solutions
- Information displayed in work teams without control or possession of the company
- Lack of applicability in important areas of the business
- Little culture of modern collaboration

Ideal Solution

- Adology is designed so that the basic and advanced workloads of Office 365 are taken advantage of, which represents an increase in knowledge and use of the platform by up to 40%. The solution carries with it a training plan that allows users to know what they have, how to use it, and when to apply it.
- Encourage collaborative work and innovation

Desired results

- People working collaboratively and exchanging information
- Company moving towards digital transformation through the use of technological tools
- Stimulation of creativity and co-creation of products and services

Connect to Digital Transformation with Microsoft Teams

Training

- Knowledge of collaboration tools for their correct use
- Segmented training structure
- Training content prepared by specialists in the area

Integration

- Employee empowerment
- Allows you to communicate from clear and simple way
- Motivates the employee to get the most out of their knowledge

Development and Collaboration

- Promotes collaboration in an open environment
- Offers a set of collaborative tools
- Provides Collaborative Networks

Integration and Development

With the objective of empowering employees in the establishment of policies, roles, responsibilities and planning according to the business area and to get the most out of the Microsoft 365 platform.

Product Alignment

Microsoft Teams – Microsoft 365

Microsoft Teams, a platform implemented on the Microsoft Office 365 solution, allows customers to take advantage of the cloud infrastructure, guaranteeing greater productivity to their employees. Customers buy this solution for a scalable communication solution with many collaboration capabilities.

Creating a more integrated and collaborative world with Microsoft Teams

Adology

Adology has been structured based on business horizontalities. The analysis of the different business areas is integrated with the characteristics of the tools to result in applicability in the main tasks of each department. In this way, the use of the tools remains at high rates. Policy setting at the department level also makes it easy to use.
