

Migration to Azure: 4 Week Implementation

Mismo Systems offers end-to-end consulting & migration services to migrate your on-premises applications/workloads/servers to Microsoft Azure. Cloud migration is the journey of migrating applications, servers, and data from an on-premises Datacenter or from legacy infrastructure to public cloud infrastructure (Microsoft Azure). Migrating to the cloud seems to be an easy decision to take, however, it should be taken very carefully. A smooth migration requires a lot of assessment and planning, including detailed impact assessment on business processes and operations.

Our Approach

Phase 1 – Assessment and Design

- Assess the on-premises environment using native tools
- Capture the business and technical requirements
- Identify risk and dependencies
- Plan and design the cloud solution based on the assessment

Phase 2 – Migration

- Rehost/Refactor/Rearchitect/Rebuild the application/workload on cloud
- Document and handover to operations team

Phase 3 – Optimization

- Monitor the Azure environment and resources after migration
- Optimize the resources based on the monitoring results to improve performance and optimize cost
