

# Cirrus M365 Cloud Backup

Cirrus has been designed to provide businesses like yours with the assurance that their Microsoft 365 data is safely resting – backed up, secure and easily recoverable from ransomware, accidental deletion or deliberate removal.

01

## Full Coverage

Microsoft's Shared Responsibility Model makes it clear that the owner of the data is responsible for backing it up.

02

## Compliance

Many sectors are subject to data retention requirements to keep individual user data for up to 7 years.

03

## Ransomware

With threats and the average ransom payout on the rise, your data could be a sitting target.

04

## Accidental Deletion

Without proper protection it is easy to delete a user's mailbox and data by accident.

05

## Corruption

If your data was to become corrupted, Cirrus enables you to restore uncorrupted data.

06

## Retrospective Investigation

Microsoft 365 automatically deletes a departing employee's data, unless you protect it with Cirrus.

## YOUR DATA IS PROTECTED
