

Microsoft Cloud App Security 1- Day Workshop

Moves consultants can help you get an overview and an understanding of Cloud Application Security. It provides simple deployment, centralized management, and innovative automation capabilities.

What is Cloud App Security?

Microsoft Cloud App Security is a Cloud Access Security Broker that supports various deployment modes including log collection, API connectors, and reverse proxy. It provides rich visibility, control over data travel, and sophisticated analytics to identify and combat cyberthreats across all your Microsoft and third-party cloud services.

Cloud App Security Framework

- Discover and control the use of Shadow IT: Identify the cloud apps, IaaS, and PaaS services used by your organization. Investigate usage patterns, assess the risk levels and business readiness of more than 16,000 SaaS apps against more than 80 risks. Start managing them to ensure security and compliance.
- Protect your sensitive information anywhere in the cloud: Understand, classify, and protect the exposure of sensitive information at rest. Leverage out-of-the box policies and automated processes to apply controls in real-time across all your cloud apps.
- Protect against cyberthreats and anomalies: Detect unusual behavior across cloud apps to identify ransomware, compromised users or rogue applications, analyze high-risk usage and remediate automatically to limit the risk to your organization.
- Assess the compliance of your cloud apps: Assess if your cloud apps meet relevant compliance requirements including regulatory compliance and industry standards. Prevent data leaks to non-compliant apps, and limit access to regulated data.

With this Workshop you will receive

- Configuration of the service with an existing firewall
- Presentation of traffic towards the applications
- Examples of good and weak applications
- Investigation of shady users and traffic
- Presentation of baseline and creating a good security fundamental
- Present and go through the end report.
