PROJECTS

Test Environment Management

Day 0: Preparation

Define the scope of the assessment and gather information about the current system and processes in place. Identify key stakeholders and invite them to participate in the assessment process.

Day 1-2: Interviews

Conduct interviews with key stakeholders to gather information about the current state of the system and processes. Identify areas of improvement and pain points.

Day 3: Observation

Observe the current processes in action, including deployments, incident management, and change management. Identify areas of improvement and pain points.

Day 4-5: Review documentation

Review all relevant documentation, including system architecture diagrams, code repositories, and incident management procedures. Identify areas of improvement and pain points.

Day 6-9: Report

Prepare a report that summarizes the findings of the assessment and provides recommendations for improvement.

Day 10: Review

Review and present the report with key stakeholders and obtain feedback.

Benefits of our offer

The assessment typically includes a review of existing processes, technology stack, and organizational culture to identify areas for improvement.

The findings and recommendations can help organizations optimize their DevOps practices, enhance collaboration and communication, and ultimately improve their software delivery process.
