Today’s cybersecurity landscape continues to see an increase in attacks across all categories—more phishing, more ransomware campaigns, and more identity-centric threats. It’s no longer enough to protect your endpoints and have an entirely separate email security strategy. Attacks are targeting the gaps between these siloed point solutions, leaving security analysts to manually correlate individual alerts and slowing down response.

**Extended detection and response (XDR)** can address these challenges with correlated alerts and a more complete view of the kill chain to improve not only threat detection, but also response efficiency. XDR is evolving and not every XDR has the same capabilities.

**Microsoft 365 Defender** is Microsoft’s market leading XDR solution. It provides native protection across endpoints, hybrid identities, email, collaboration tools, cloud apps, and data loss insights. Beyond incident-based investigation and response, it offers centralized visibility, powerful analytics, automatic attack disruption, and unified security and identity access management to drive SOC efficiencies and ensure that organizations have access to the latest intelligence and research-based protections.

Microsoft 365 Defender delivers

- **242%** Return on investment (ROI)
- **>80%** Alert queue reduction
- **>75%** Work items resolved with automation

Get started today with Microsoft 365 Defender

Energize your security operations in the unified solution to detect, respond, and protect against advanced attacks more effectively.
