

Insight

Comprehensive digital case management for every type and size of investigation.

Insight is an end-to-end investigation management system. It provides a complete overview of the progress of an investigation. It lets you record incidents, store, order and search evidence, share information and manage activities.

Insight helps police forces and other enforcement organisations catch criminals. It's fully auditable, letting you illustrate every step of your investigation.

Why choose Insight?

Insight can manage every aspect of your investigation, including preparing court-ready documents.

- **Manage crime investigation information cohesively** – Insight keeps everything securely in one place
- **Improved management oversight** – identify areas that warrant closer inspection, allocate tasks and actions and review findings
- **Share information** – quickly and easily allow colleagues access to information
- **Full audit capability** – use Insight to record events and decisions, giving you an accurate record of your investigation

Insight isn't about changing procedures, it's about making them more efficient and effective. It lets you store, link and share information and evidence, making it easier to spot connections, patterns and discrepancies.

Information storage

Insight is your central repository for all data and information connected with an investigation. It lets you store documents, photographs, audio and video recordings and notes. Everything stored in Insight can be linked, creating a bank of easily searchable data for your investigators. You can view linked data diagrammatically, giving you a visual representation of any emerging patterns.

Powerful search capability

Insight can search across multiple investigations, looking for elements that tie crimes and other incidents. Useful filters let you narrow the parameters of your search to focus on specific issues or information.

Management overview

You can easily see the progress and results of every investigation. This lets you manage resources more effectively, allocate tasks to your investigation teams, and see the costs incurred by investigation activities.

System wide audit trail

By recording evidence and information as it's acquired, logging events, activities and decisions, you'll be able to provide a clear picture of every step of your investigation.

Court document preparation

Insight makes creating critical documents such as 'court bundles', lists and schedules straightforward. You can quickly produce standardised evidence, disclosure and all other forms, and add further, customised, items to these materials.

Easy to install. Easy to use.

Installing Insight on your IT infrastructure is straightforward.

You can run multiple investigations on the Insight platform – the more information you collect on Insight, the more useful its search facilities become. Using Insight is easy too. We provide full training for your investigators to ensure they get the most from your investment.
