Solve Enterprise Spreadsheet Issues

WORKSCOPE PROVIDES DEDICATED TECHNOLOGY TO MAP, MONITOR AND IMPROVE SPREADSHEETS AND PROVIDES MORE EFFICIENT MANAGEMENT OF THE END-USER COMPUTING ENVIRONMENT.

What is Workscope?

Workscope is an automated end-user computing and shadow-IT management solution which will discover and continually monitor spreadsheets and the associated usage behaviour across the organisation.

Files are discovered and analysed regardless of whether they reside on the network or on local computers. Workscope delivers unparalleled insights and a control framework that will enable you to tackle organisational challenges related to spreadsheets, end-user computing and shadow IT without the manual overhead that comes with alternative methods and existing solutions.

Why use Workscope?

Your employees regularly use spreadsheets as part of their daily workflow. Business logic and processes built within spreadsheets have, often unintentionally, grown into strategic solutions that support day to day business operations.

Your goal is to reduce the risk (e.g. data or operational risk) associated with spreadsheet processes, to improve governance and transparency, or to reduce the organisation's dependence on spreadsheets, enhance operational efficiency or migrate processes into new, purpose-built solutions.

Before Workscope

After Workscope

How is Workscope different?

|			
Combines file information and usage behaviour	No need to move files, just plug-in and start gathering insights	Contextual insights enable prioritised remediation and accelerated change	Govern an unlimited number of spreadsheets at no extra cost

Workscope delivers significant time-saving and value by automatically gathering in-depth, contextual insights that enable you to focus on the right things at the right time. Whether you want to address an overdependence on spreadsheets, or you want to govern and control processes that depend upon them, Workscope will enable you to pinpoint where best to spend your limited time and resources.

- Exposed Intellectual Property
- Inefficient Process
- Process Silo
- Key-Person Risk
- Broken Macro
- Time Consuming Process
- Hidden Errors

✓ Take stock of your inventory.

✓ Deal with issues and spot efficiency opportunities.

✓ Stay organised and demonstrate control.

Take stock faster and with more context

Get quick access to insights on files and the associated usage behaviour that supports them. Real-time insights enable you to pinpoint the biggest opportunities for improving efficiency and supporting change across the organisation.

Scalable solution for the entire business

Answer the 'What if' questions and develop new business insights across multiple departments. Insights are backed up with data and metrics, which inform critical decision-making for transformational initiatives.

Reduce risk by alerting the right stakeholders

Automated monitoring identifies and alerts relevant users to technical errors, risks and non-compliance against the internal governance policy before issues can impact the business — no need for manual tracking and management.

Be transparent, auditable & compliant

A living inventory of spreadsheets, their associated business impact and criticality are known to the organisation. It is clear who owns and uses each file, and for what purpose they are used. The full data lineage is visible and downstream processes can be better understood.

Within 3 Months of Using Workscope

Reduce the number of hidden errors and vulnerabilities within a few weeks.

Manual workflows, data lineage and key dependencies are clearly mapped out.

Governance for all official models and EUC's to ensure they meet internal policies.
