Assess

How

AVD Discovery

What

- Solution assessment to review user profiles, user experience and resource requirements
- Analysis and interpretation assessment data
- Cost modelling
- Target state planning
- Stakeholder walk through

Value

- Visualise the future state
- Kickstart a business case for scalable growth
- Get early stakeholder buy-in

Cloud Direct®

AVD Discovery

Positioning

Prepare for the world of Hybrid Work in Azure

Fully understand the adoption of AVD.

Understand your user profiles, user experience and resource requirements.

Align to Microsoft's best practice.

Benefits

Understand the adoption of AVD

This service will provide a key part of the overall adoption business case and build stakeholder confidence in proposed plans.

Deliverables

Project Statement of Works to initiate the adoption of Azure Virtual Desktop.

Presentation of data analysis findings to articulate the target state options for your organisation.

Walk through with key business stakeholders.

Summary of works

Requirement gathering workshops

Organisational – what are the drivers and expected value for cloud adoption

Service – what commitments are in place for the scoped workloads

Operational – how are the scoped workloads currently supported

Target state solution identification

Build a business case focusing on the potential technology used in the target state reflecting what is achievable within your requirements constraints.

With the target state identified, you will have an accurate understanding of what the architecture will look like and comprehension of the expected efforts and expectations from all parties.

Analysis of current deployed workloads

You will need to provide Cloud Direct with any previous assessment data. This should ideally come from a preliminary stage Endpoints Workshop and a more detailed Microsoft funded solution assessment nominated by Cloud Direct.

Stakeholder walkthrough

A walk through of the analysis, requirements and proposed solution with stakeholders.

This will include working with your developers or development partner.

Helping all parties understand the findings and recommendations to help inform a business decision on next steps.

Cost modelling

Understand the cost implication of performance and security within the many options you have within the AVD environment.

Project costs will also be identified for the execution of any proposed works.

This will allow your organisation to align budgets and evaluate benefits against more accurate costs.

Assess ➡ Plan ➡ Implement ➡ Operate
