

Your Microsoft Vision. Our Approach.

At QA, everything starts with our learners. Transforming their career motivates and inspires us. We empower them to fulfil their potential; creating capability, building confidence and breaking down barriers to opportunity. And we know if we get it right for them, we'll get it right for our customers.

As a Microsoft Gold Partner, we support over 40,000 Microsoft learners each year across various Microsoft technologies. No one business has the same challenges, and so our Solutions Specialists are able to work collaboratively with organisations to design innovative solutions to power capabilities. Whether it's online or face-to-face courses, an apprenticeship, degree or masters, QA are ready to help learners and organisations achieve more.

Developing skills? We've got you covered.

QA have a learning solution for everyone.

An Apprenticeship with QA allows learners to gain Microsoft certification (MTA) while working and gain industry experience. In 2016, QA apprentices and employers won awards in every category at the Microsoft Apprentice of the Year Awards.

QA work closely with Microsoft to keep our curriculum up-to-date, including offering the latest role-based certifications across Azure, Dynamics, M365 and Windows 10. Alongside our Microsoft Official Curriculum, QA have developed a QA Mastering track to compliment certification and deep dive in to individual technologies. Our courses and certifications provide the latest skills, all taught by our Solutions Specialists. These Specialists are all experts in their field, with real-world experience. These experts deliver learning across multiple mediums - Virtual, eLearning, Attend from Anywhere and Video Learning - as well as bespoke digital programs. This means we are able to support at any stage in the learning journey.

Consulting helps organisations to hire new talent by training STEM graduates across a 12-week programme, providing skills in the latest technologies such as Cloud. In partnership with Microsoft we have developed three Graduate Consulting offerings to enable your Microsoft DevOps, Data and Analytics delivery teams: Azure Data Science, Azure DevOps and Dynamics365.
