

# Azure Spark

**Azure Spark is the Evros Consultative Engagement designed to light the path towards Cloud adoption for our customers.**

The organisations that align their technology, people and processes to the transformative benefits of Cloud will be the first to gain the competitive advantage. The increasing number of industry leaders are recognising the many benefits of migrating to the Cloud: agile operations, increased scalability and richer data analytics. Azure Spark allows organisations to confidently migrate and develop Cloud-based services with the certainty that the technical, security and governance aspects have been considered, agreed, and implemented.

Evros provides the framework to assess and answer the technical, design, security, and governance questions raised by Cloud adoption specific to your business with Azure Spark. Drawing from our deep heritage in Cloud, our team will work to understand the interdependencies between workloads and provide an order of magnitude costs for migration to the Cloud.

The outcome of this engagement will provide your organisation with an Azure tenant connected securely to your corporate network and built to an agreed technical and governance framework, in line with Microsoft best-practice guidelines.

**Head of Enterprise Architecture, Martin Carry says the key driver is understanding the customer’s requirements and concerns:**

*“ We want to give your company the ability to progress to the Cloud in a controlled manner that is secure, compliant, well-structured, and understood. Our team operates on a consultative-led approach, posing the relevant questions around security and governance and driving out the correct decision for your organisation with your stakeholders. ”*

## Evros will deliver

Azure Spark delivers the following level of engagement:

### 1 Azure Scaffold Workshop

- Definition of the Governance and Design Model

### 2 Azure Scaffold Document

### 3 Azure Assessment of On-Premise Document

- Readiness Assessment
- Compatibility Cross-check
- Dependency View
- Cost Estimate

### 4 Azure Subscription

- Integration with new or existing Azure AD tenant
- Network Connectivity via VPN (customer CPE configuration required)
- Azure Network Segments Defined

### 5 Deployment Documentation

# The Evros Cloud Advisory Team

The Evros Cloud Advisory Team is built upon dedicated Cloud consultants who provide expertise across a wide range of cloud technologies, including Azure Public Cloud, Private Cloud Solutions and Hybrid deployments such as Azure Stack, PaaS and SaaS services.

Evros wants you to get the most from your investment. Our team will guide you through each stage of your cloud journey and advise on identity management, compliance, DR, development and licensing as well as long-term Microsoft Azure managed services.

## How We Help

The Evros Azure team will help you:

Create clarity surrounding your Azure deployment, controls and financial oversight.

Optimise cost measures and facilitate your migration to a subscription-based model.

Benefit from an Azure architecture customised for your enterprise requirements.

Enhance your Cloud compliance, governance and security.

## Who We Are

Evros is a proud Microsoft Gold Partner, enabling businesses like yours to deploy a consistent Azure experience that maximises efficiency, flexibility and productivity.

Gold
