

Calian Corolar Virtual Care

Easily tailor virtual healthcare solutions to fit your unique programs – all in Microsoft Teams.

Corolar Virtual Care (CVC) is a Microsoft Teams native solution for healthcare providers to rapidly launch virtual services that fit your community.

Clinicians can easily access patient data within Microsoft Teams for better collaboration with care teams and better outcomes for patients.

For clinicians

Reduce wait-times, increase patient satisfaction, and support collaboration among care providers.

For CIOs

Eliminate data silos and maximize existing investments with secure integration to your EHR via FHR APIs or HL7 standards.

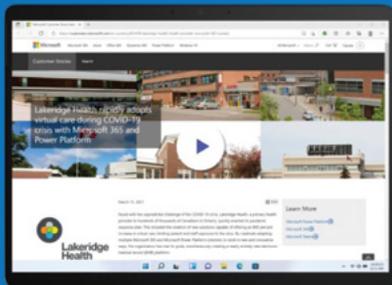

For care coordinators

Save time by working with existing EHRs, patient registration systems, and intake processes.

For patients

Provide easy access to multiple care providers and a better experience by delivering care to homes and communities.

Corolar Virtual Care

The Features

Create “one clinic” experience

Reduce the administrative workload

Manage virtual walk-ins, scheduled appointments, and triage patients across multiple clinics in a single unified view within Microsoft Teams.

Customize care pathways

Fit requirements for any clinic

Design and configure forms and interactions for different clinic types, to simplify patient check-in and streamline the experience.

Engage patients

Send reminders and alerts

Provide a better experience for patients by reducing wait times and missed appointments with notifications and reminders sent by email, SMS, or phone.

Collaborate with partners

Support the continuum of care

See all clinic appointments regardless of source system, within Microsoft Teams. Access patient status and history for improved care.

Improve access

Include multiple clinicians and patients

Add participants to an appointment as needed and launch group sessions— even during live Teams calls.

Increase efficiency

Eliminate manual data entry

Quickly and efficiently capture notes from virtual care visits in the patient’s EHR, without leaving the Teams environment.

Start on the path towards achieving patient-centred care.
