

Optiva BSS Platform™

Fully managed, end-to-end, cloud-native on the public cloud.

For CSPs of all types and sizes, Optiva BSS Platform is a multi-tenant, SaaS suite. We deliver the game-changing advantages of cloud-native BSS on the public cloud, so you can focus on growing your business — not managing enterprise software.

Best-of-Suite BSS

Design marketing plans, load subscribers, and deploy services — without having to install software on premise or worry about managing the application lifecycle, e.g., upgrades, patches, downtime.

Optiva BSS Platform offers:

- Customer Care
- Product Catalog
- Unified Rating and Charging
- Customer Self Care
- Payments and Voucher Management
- Billing and Collections
- Order Handling
- Policy Control
- Dealer Care
- Wholesale Settlement

Features and Functionality

Fully Pre-Integrated

- Pre-packed, end-to-end, real-time BSS suite for rapid launch and low TCO

Catalog-Driven BSS

- Integrated order management
- Automated service fulfillment

Digital Customer Journey

- UX-driven, self-care features
- Single shop view through all omni-channels

Real-Time “Smart” Offers

- Cross-service promotions
- Rapid, real-time, micro-campaigns
- CRM-based macro campaigns

Cross-Service Monetization

- Cross-channel services
- Billing and CRM evolution
- Complex service bundles

It's All About That SaaS!

Software as a service is not just a business model. It enables telco operators to move from CAPEX and a perpetual license to a term license — from “owning” a solution (and its operational liability) to receiving a service. But SaaS is also a better way to deliver software and manage it.

Optiva BSS Platform allows you to more efficiently and cost-effectively tap into a constant flow of new features and functionality, as your specific configuration is automatically updated based on the generally available product on the public cloud.

Public Cloud Changes the Game.

The complexities of bare metal or even virtualized enterprise software deployments are a thing of the past. With effectively unlimited scale and capability for worldwide reach, there simply is no contest when it comes to cloud options — especially when evaluating costs.

Optiva BSS Platform is optimized for public cloud, which means you can:

Pay as you grow. The platform license and compute power resources on the public cloud are offered in a flexible, dynamic model. You can take advantage of scalability and elasticity — paying only for what you need, when you need it.

Reduce TCO by up to 80%. Save big by eliminating the need to purchase, manage, and maintain your own infrastructure, on-premise hardware, and software.

Tap into powerful innovation. Seamlessly access software available only on the public cloud, such as better database technology and analytics applications. Leverage a dynamic and largely open-source ecosystem for transformative technology and a competitive edge.

Enjoy faster time to market. Capture value by taking advantage of rapid product deployment and out-of-the-box commercial templates.

Go Native! It Matters.

Truly **cloud-native** software — like Optiva BSS Platform — is architected specifically for the public cloud. It leverages not only elastic, autoscaling compute power but also cloud-based software, giving you full access to the power of the public cloud and unlocking vastly superior capabilities, performance, and applications.

When evaluating a product, ask yourself: Will it auto- and self-provision? support automated, elastic scalability? leverage public cloud technology, databases, and containerization? and automatically update to receive new features and bug fixes? This is real digital transformation.

Your Solution. Your Success.

Whether launching new services, creating new lines of business, or looking to achieve more agile operations, Optiva BSS Platform offers you a cloud-native, turnkey SaaS solution on the public cloud. Save, focus, and invest in your business and customers — not your hardware and software.

Discover a better approach to BSS today. Achieve results only Optiva BSS Platform can deliver.
