

Hospital

The knowledge of your medical team at your fingertips

Hospital is a medical collaboration platform based on volumetric visualization rendered remotely in real-time. It completely eliminates the cognitive load of transforming 2D images to complex 3D anatomical structures and their biological relations. Hospital connects 2D annotations created by radiologists with spatial annotations needed for surgeons.

In the success of medical interventions, the cooperation between medical experts and effective communication between different fields is essential to reach a common understanding. Medical councils can create collaborative documents - called Boards - Annotate, Comment, Mentions, Share and meet in the virtual space.

Communicating anatomy and procedures to your **Patients** has never been more intuitive.

Limitless collaboration between physicians and specialist from anywhere in the world, on any device be it a smartphone, a web browser, Mixed Reality glasses or even a Tesla.

Prepare and navigate your surgery with our XR application. Records are automatically snapped to the patient which makes holographic navigation effective as structures appear in real scale in their true position. The boards appear in the holographic view, making the shared knowledge of your team available right in front of you. Instruments can be tracked with attached marker to determine their position in relation to the displayed hologram and the patient.

Medical records hosted from secure HIPA compliant geo-redundant cloud storage in your region.

INCLUDES:

- Private Holospital storage and computation power in your region for all your medical records
- Integration support with your existing PACS server
- Onboarding and monthly consultation with our team

DISCLAIMER:

- The software provided in the solution is
- Intended for research and educational purposes
 - Not intended for diagnostic or intraoperative purposes
 - Microsoft HoloLens is not a certified medical device

HOLOPITAL IS:

Cheaper as you don't have to equip everyone with an expensive workstation

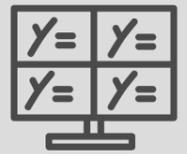

Safer as data does not leave your private cloud

Faster as there is no need to download any software or data to visualize images

More convenient as your team does not have to be in the same place at the same time

More reliable as you can be sure everyone can see the same records with the same visualization settings

Holospital
