

File-based Quality Control System

a scalable software solution for automated verification of media files and audio, video and metadata defects identification

ORBOX. Automated media file-based QC

Software solution for automated verification of media file compliance with technical specifications of broadcasters, media providers and content producers:

- Audio
- Video
- Metadata

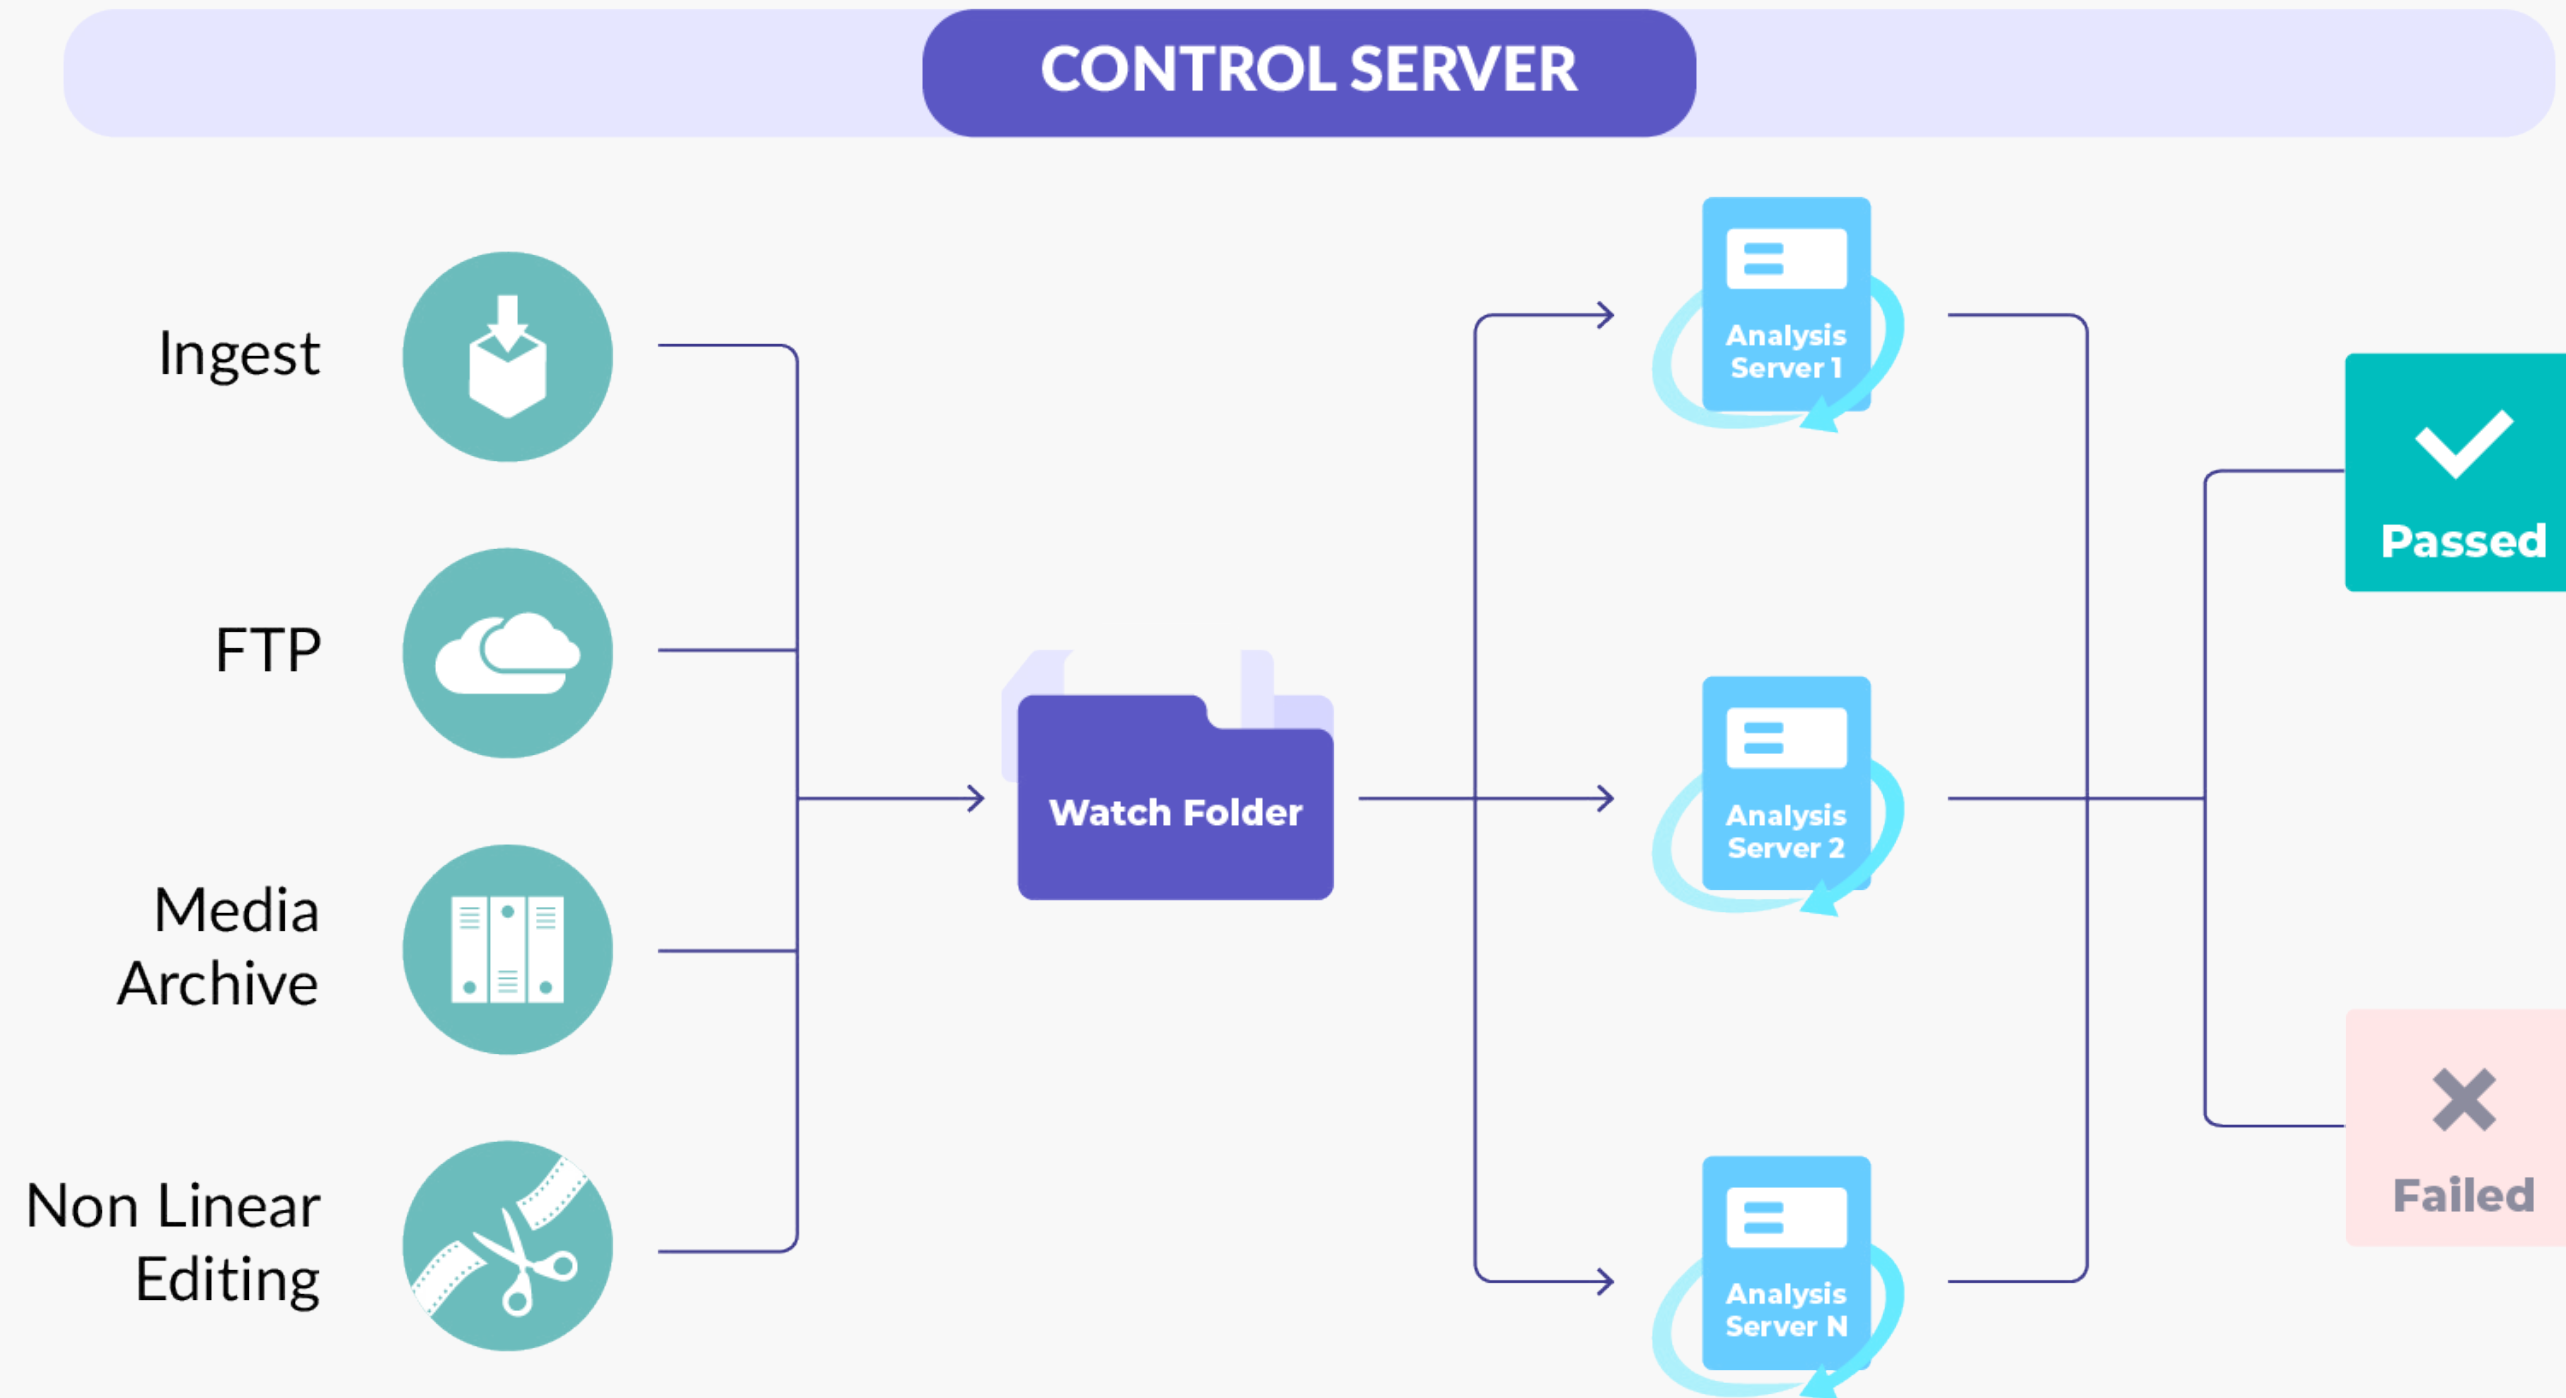

- A wide range of checks for file-based content quality verification
- Configurable test templates for specific media formats and sources
- Simple and descriptive reports, media player to playback and edit any defected fragment
- Audio analysis and loudness correction
- Easy to scale by adding analysis servers

**4x times
faster than
real time***

***Speed of HD content analysis with a full set of tests**

How It Works?

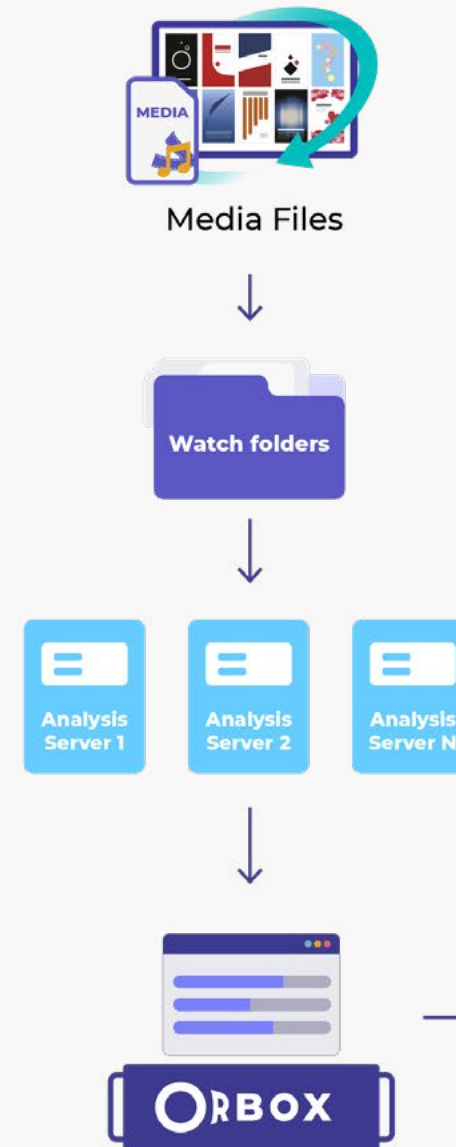

POST PRODUCTION STUDIOS

OUTGOING CONTROL

TV STATIONS

INCOMING CONTROL

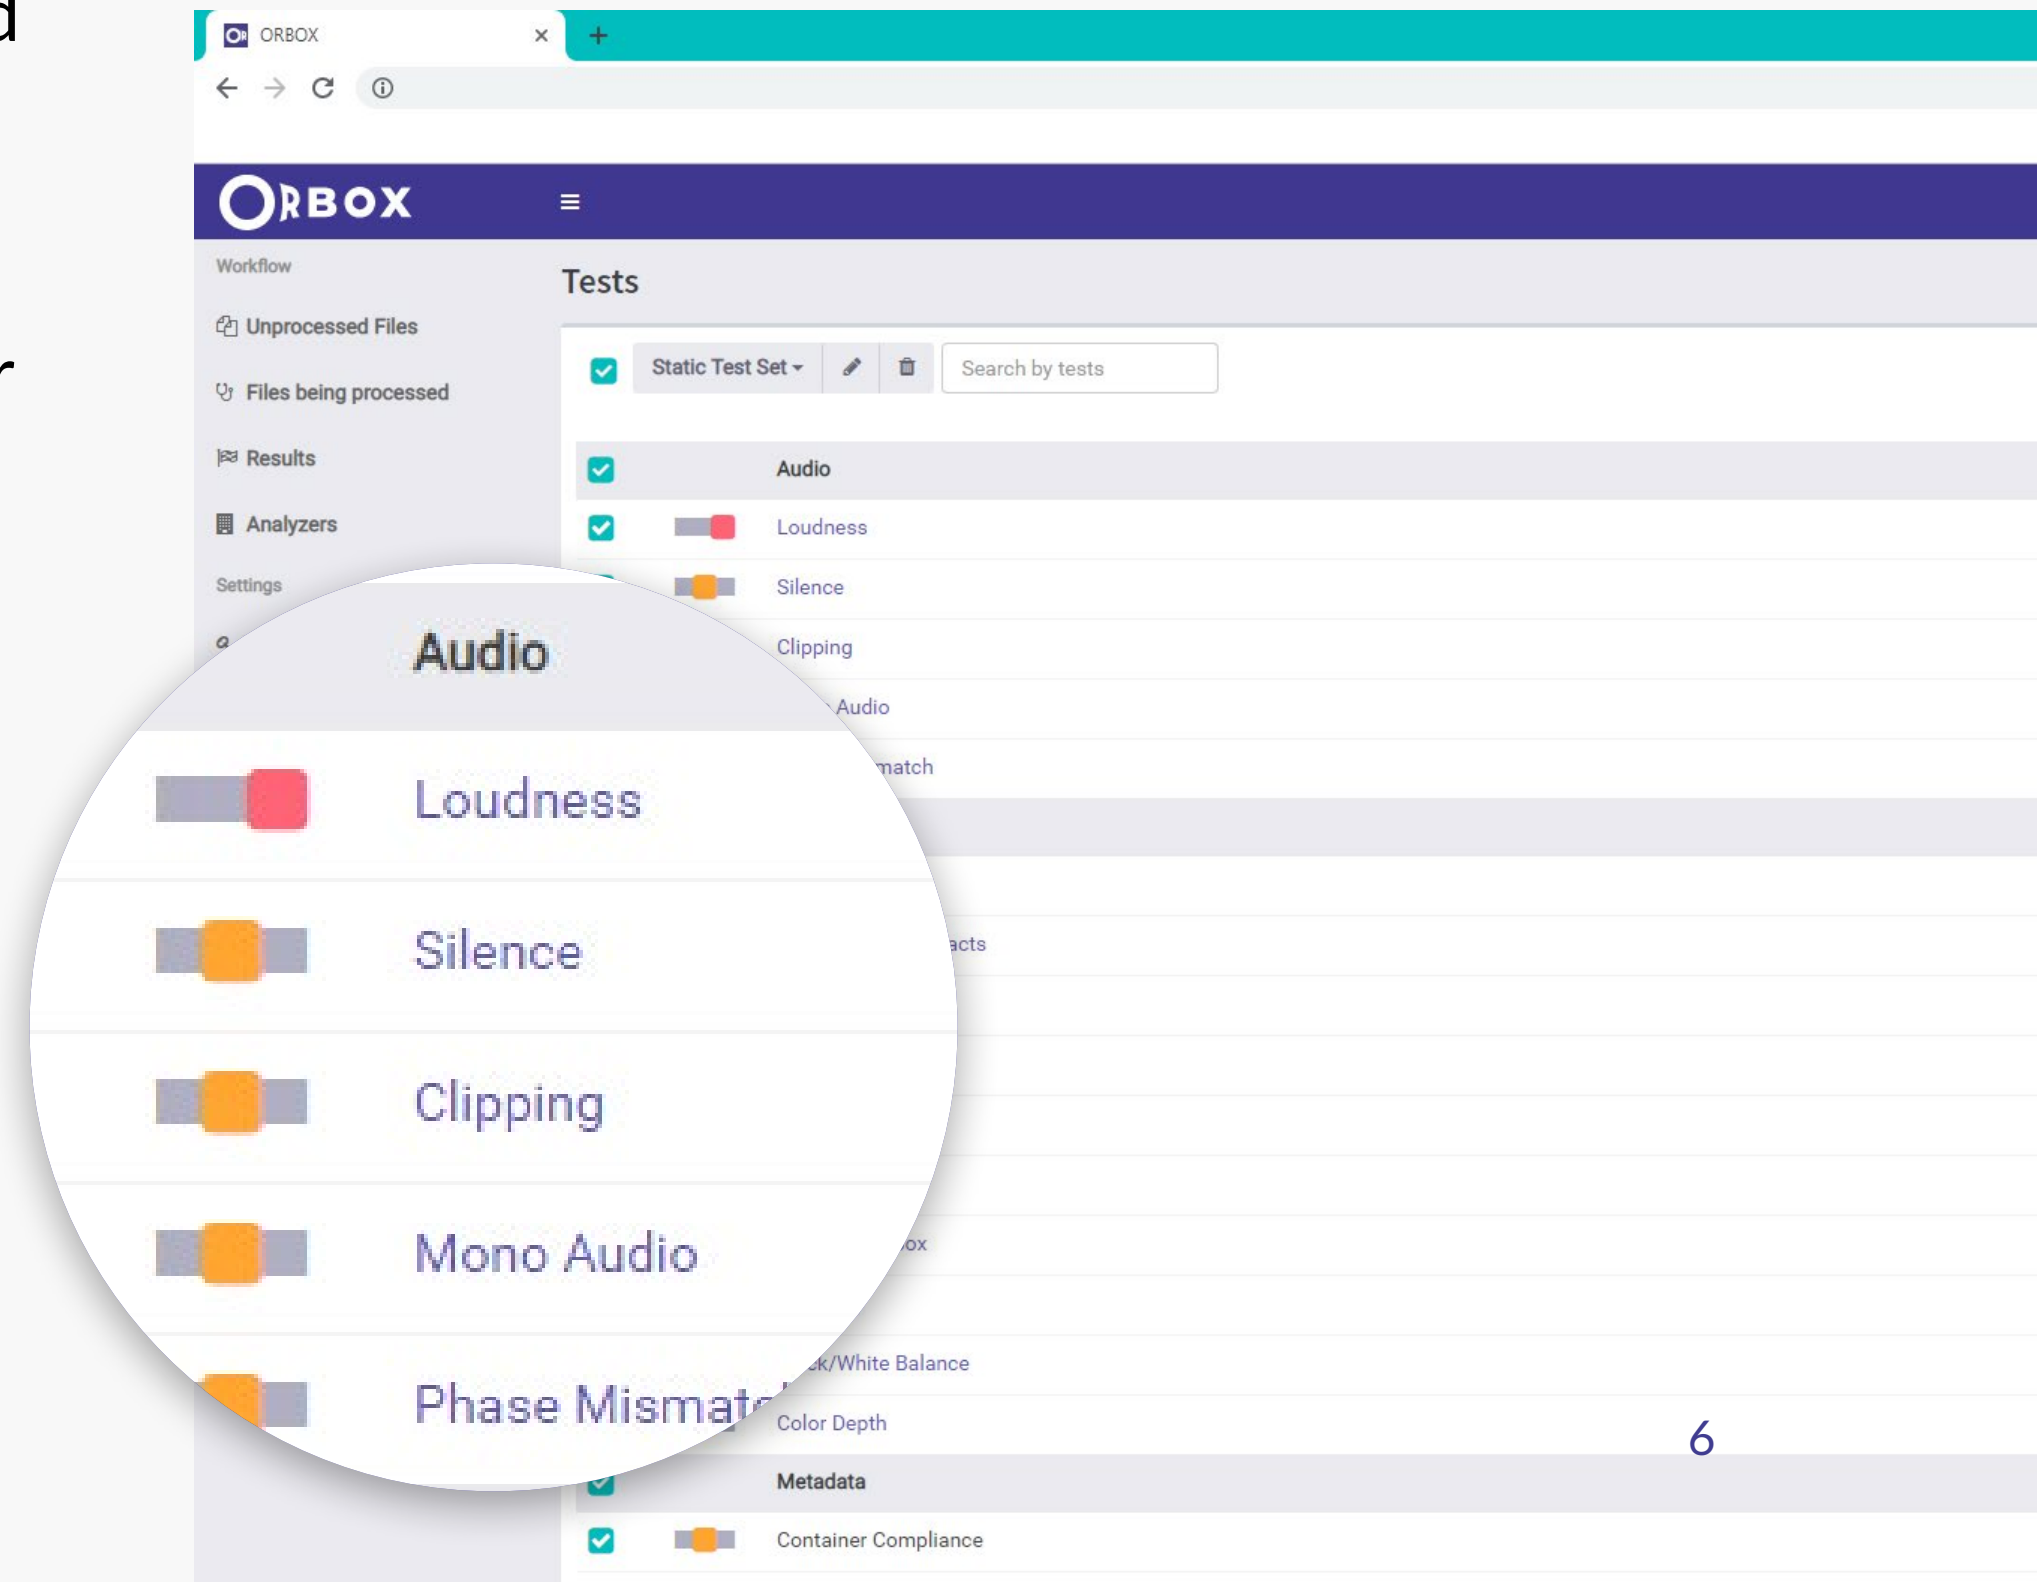

PRODUCTION

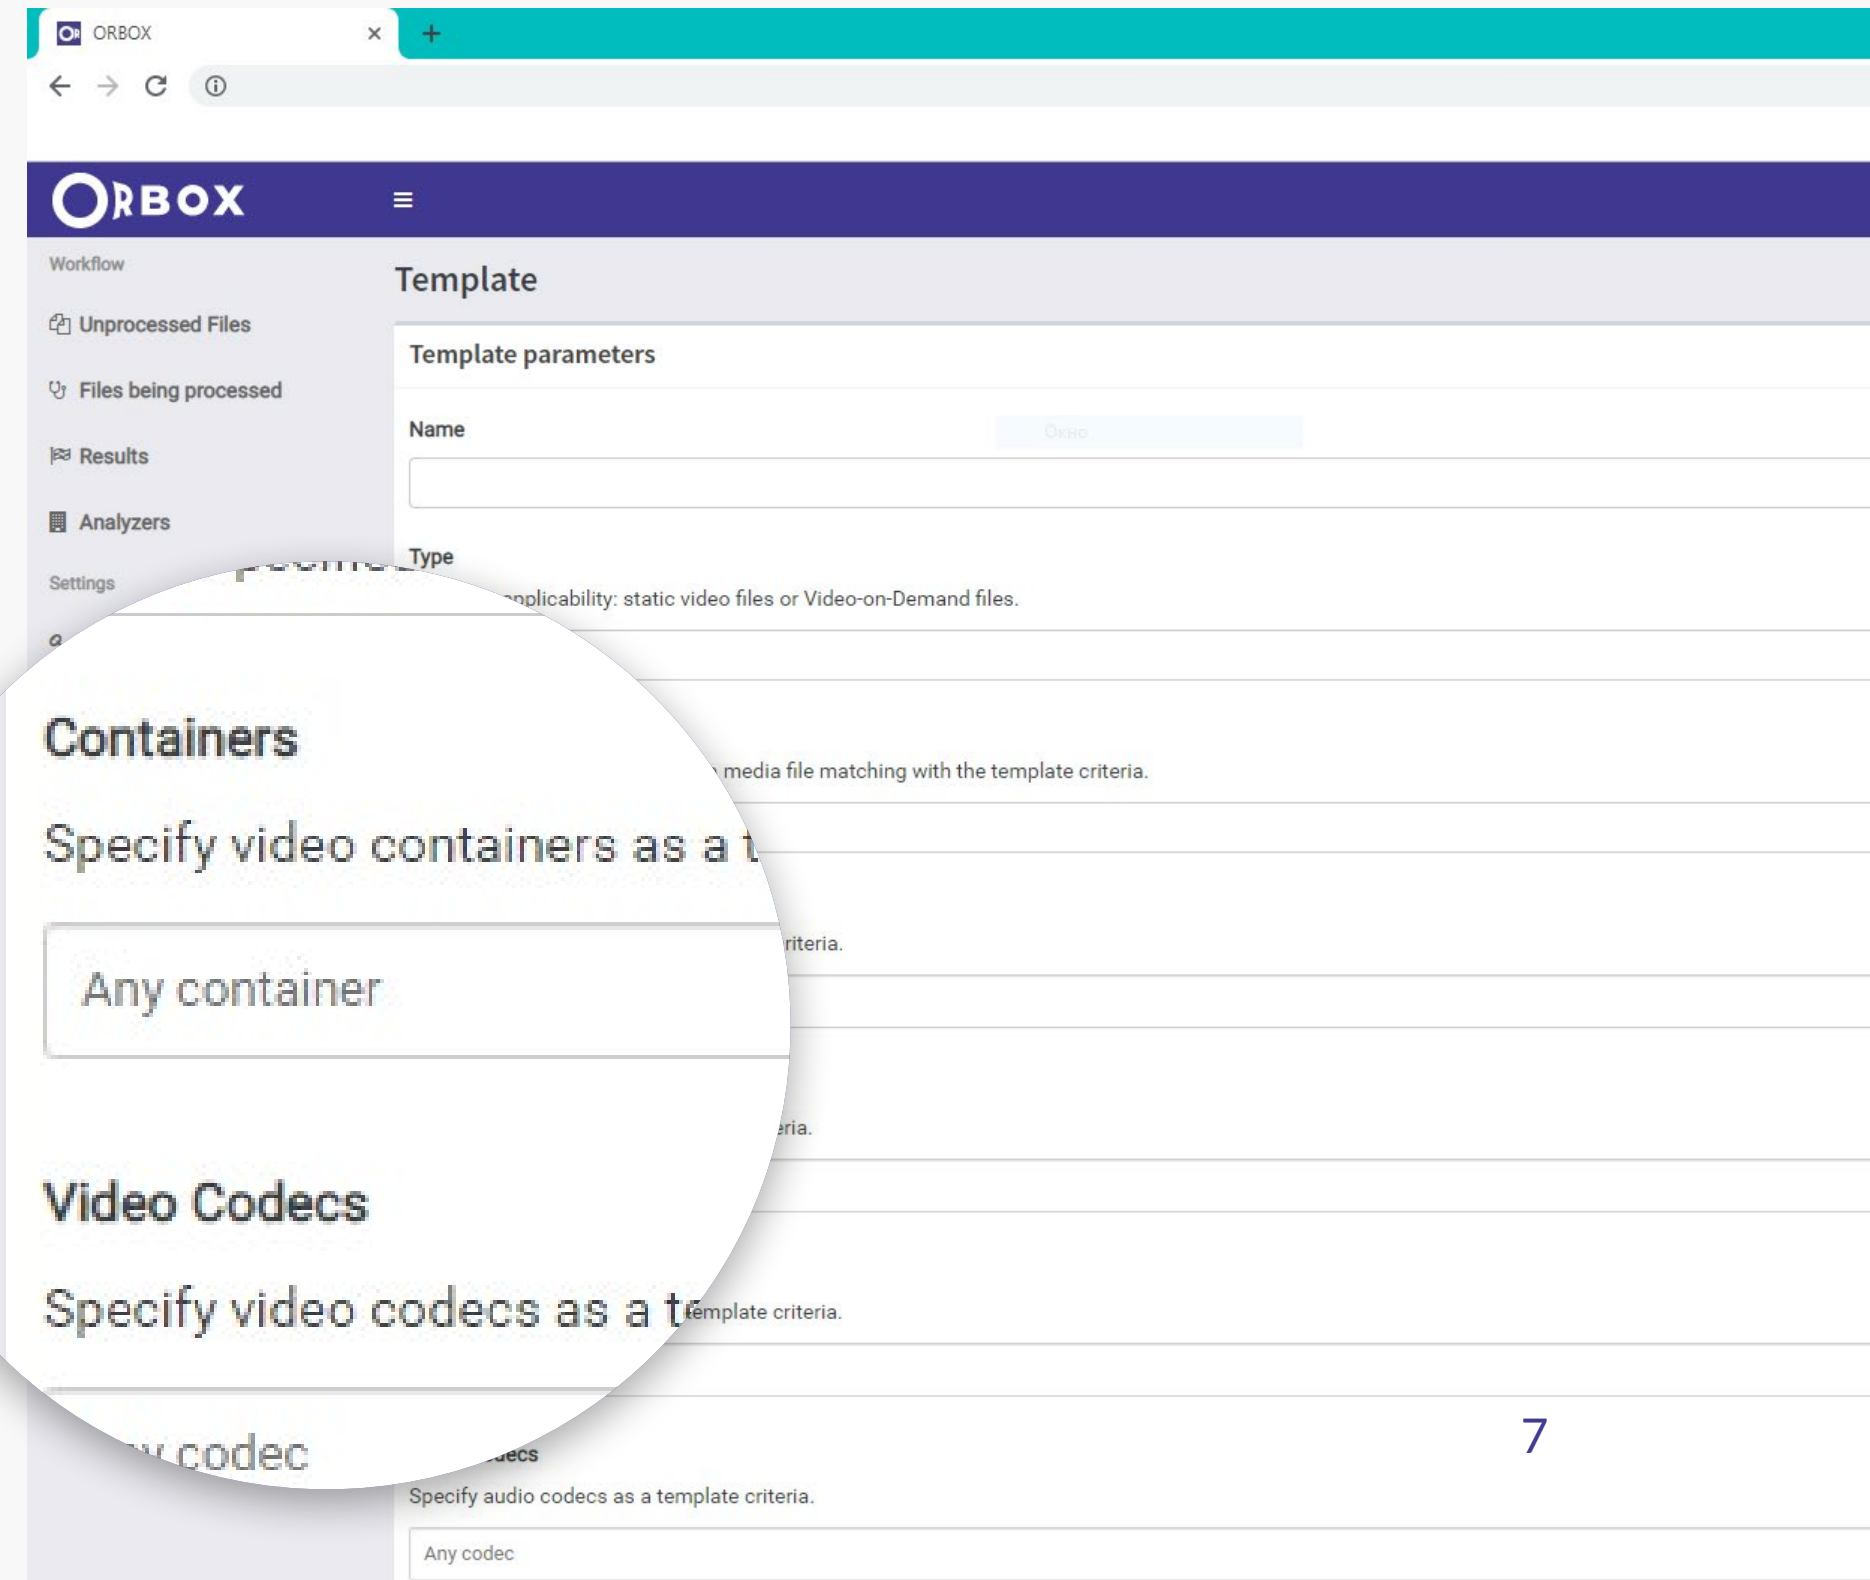

PLAYOUT

- Each test can be manually configured or default parameters can be applied
- The system enables to select critical tests. If a critical test is failed, further process of file verification is stopped
- 3 levels:
 - Low
 - Normal
 - Critical
- Import and export of data

- Setting QC rules to check multi-formatted files coming from different sources
- Routing: after analysis files can be routed to different folders
- The following parameters can be set:
 - Video and audio codecs
 - Video resolution

The screenshot shows the ORBOX web interface for configuring a workflow template. The left sidebar contains a navigation menu with items: Workflow, Unprocessed Files, Files being processed, Results, Analyzers, and Settings. The main content area is titled 'Template' and includes a 'Template parameters' section with a 'Name' field and a 'Type' dropdown. Below this, there are sections for 'Containers' and 'Video Codecs', each with a text input field and a 'Specify' button. The 'Containers' section has a callout box showing 'Any container' as an example. The 'Video Codecs' section has a callout box showing 'Any codec' as an example. The 'Audio Codecs' section is partially visible at the bottom, showing 'Any codec' as an example.

Containers
Specify video containers as a template criteria.

Any container

Video Codecs
Specify video codecs as a template criteria.

Any codec

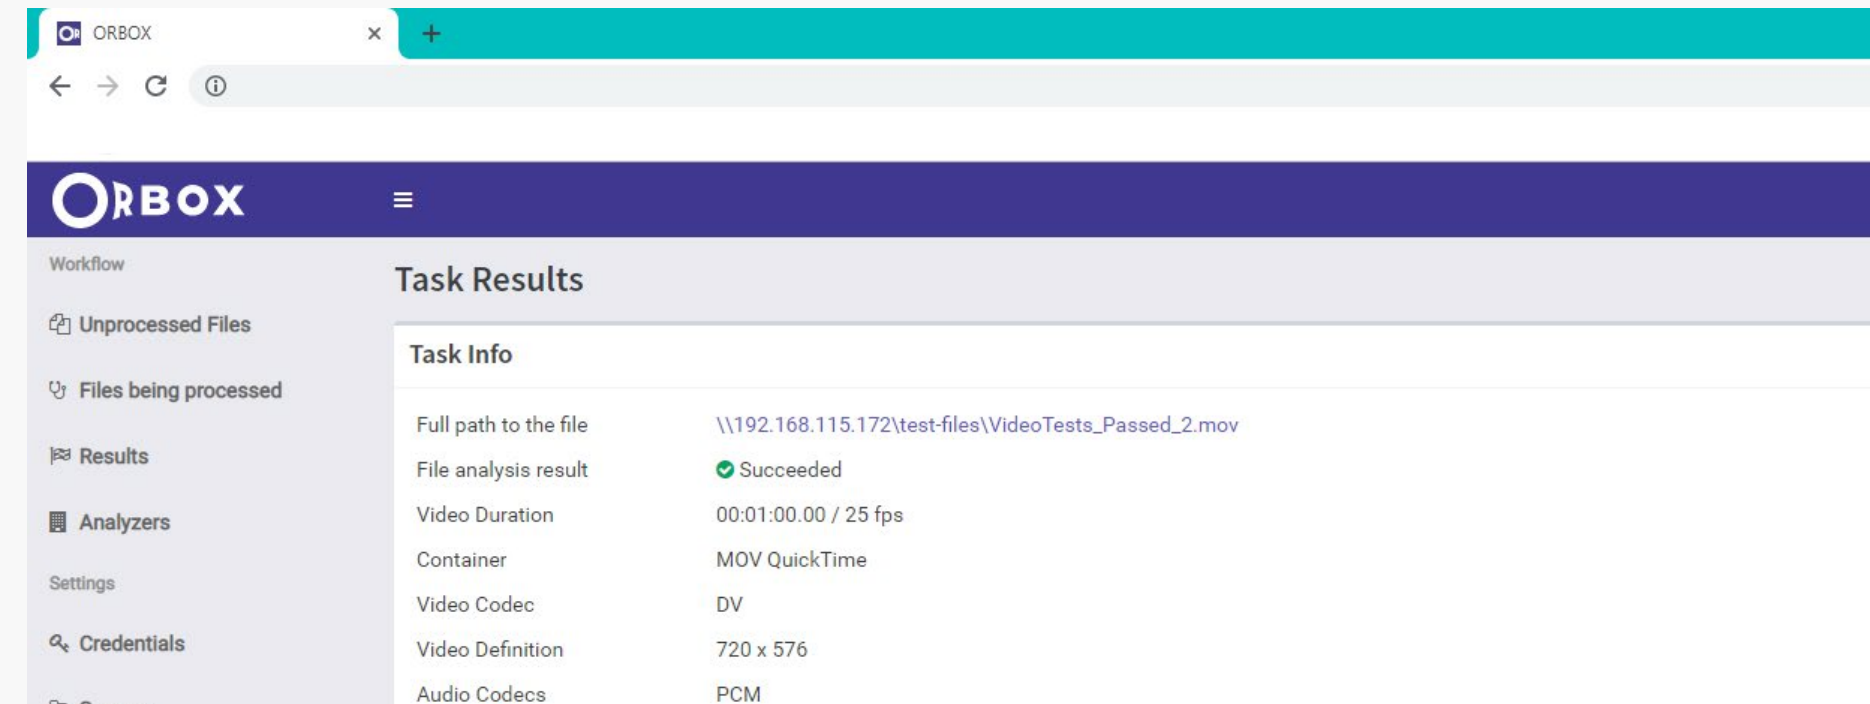

Audio Codecs
Specify audio codecs as a template criteria.

Any codec

Watching QC Results

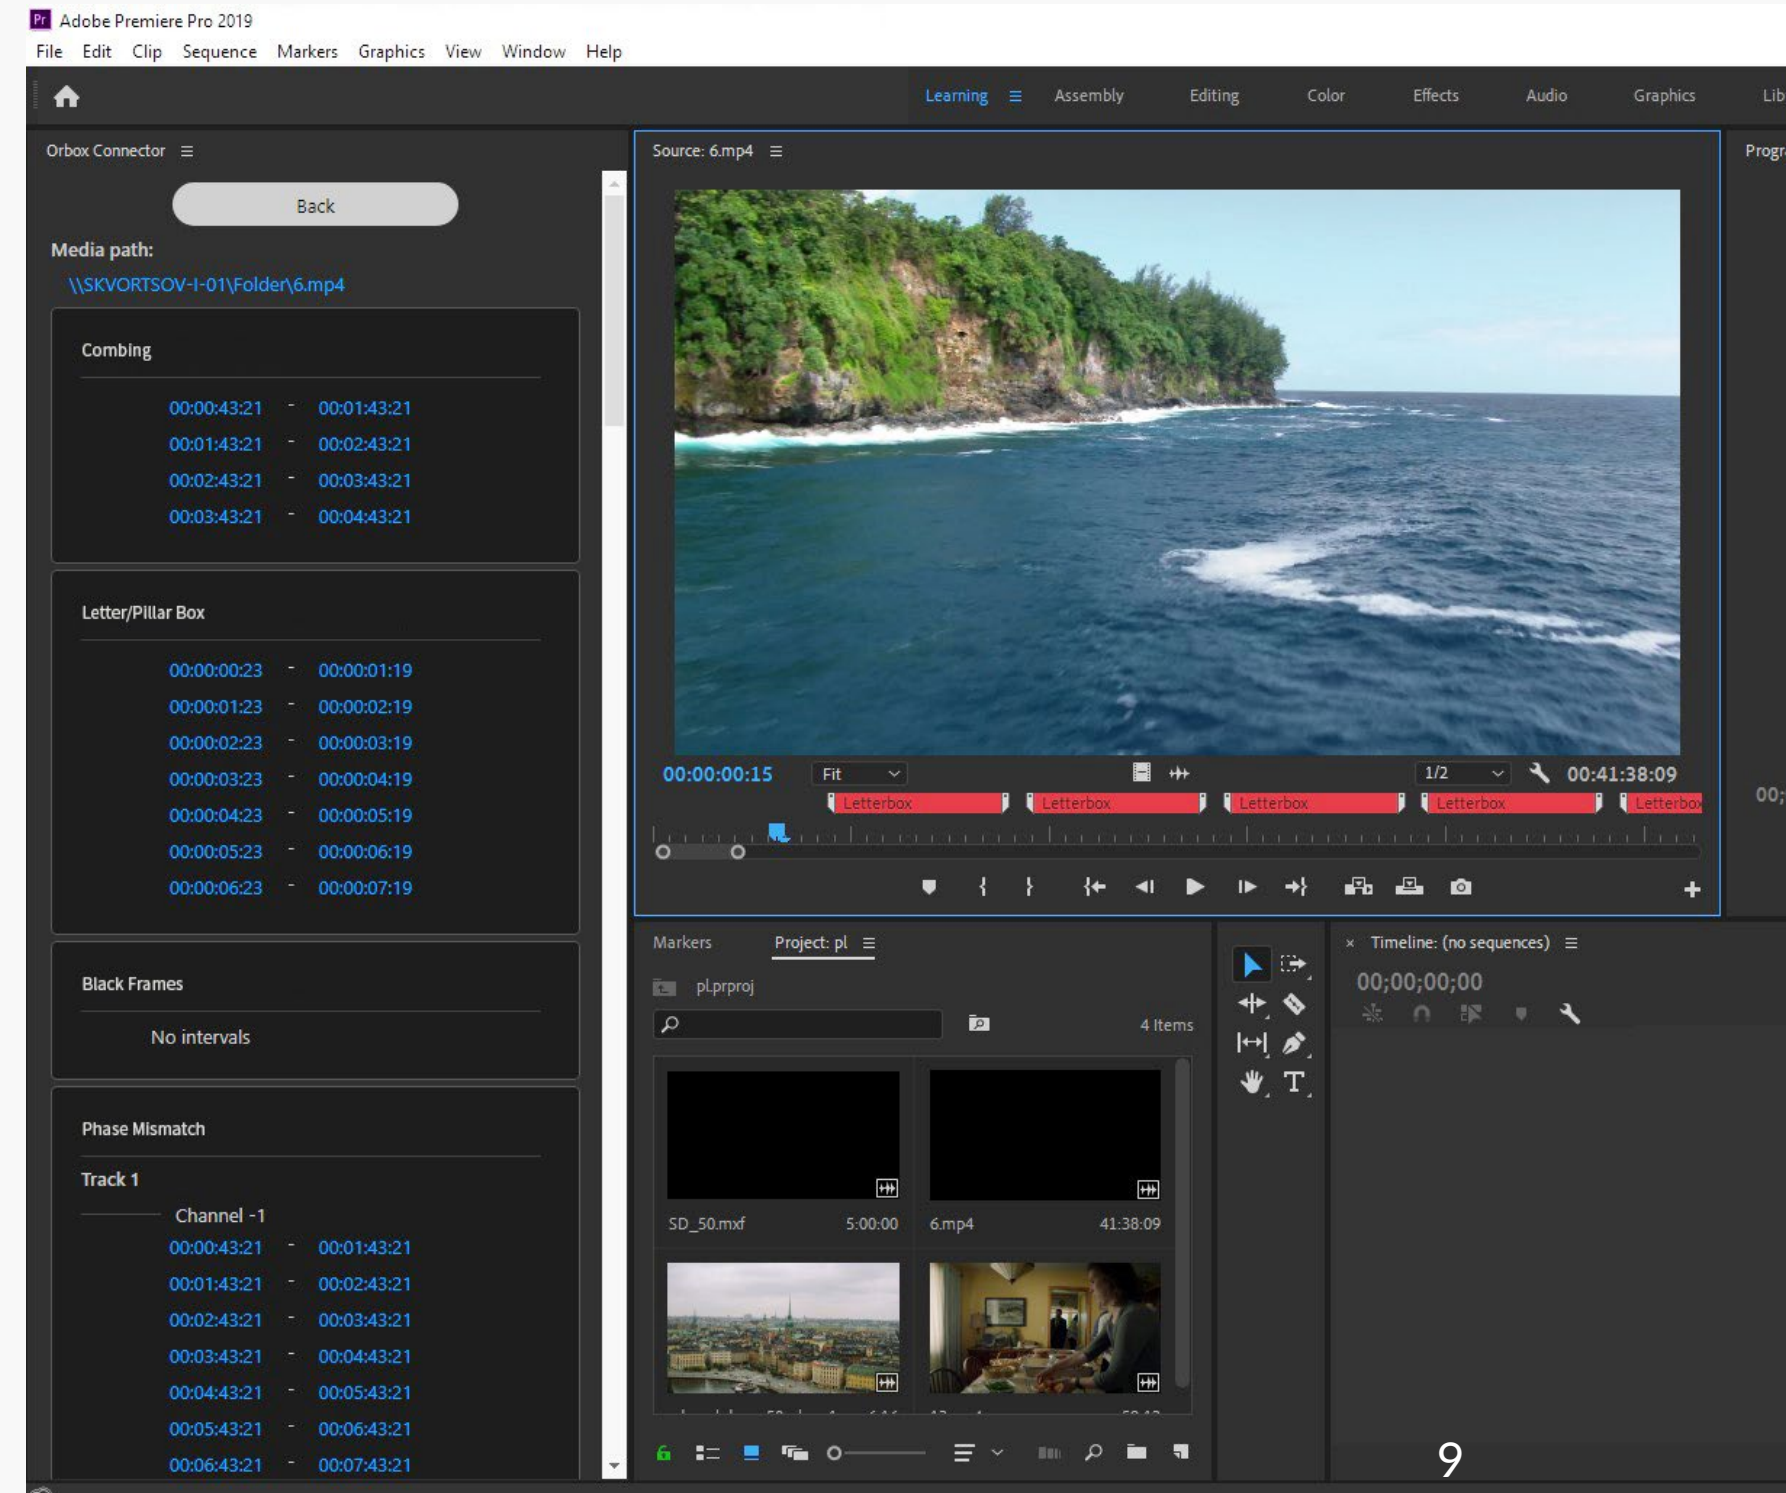

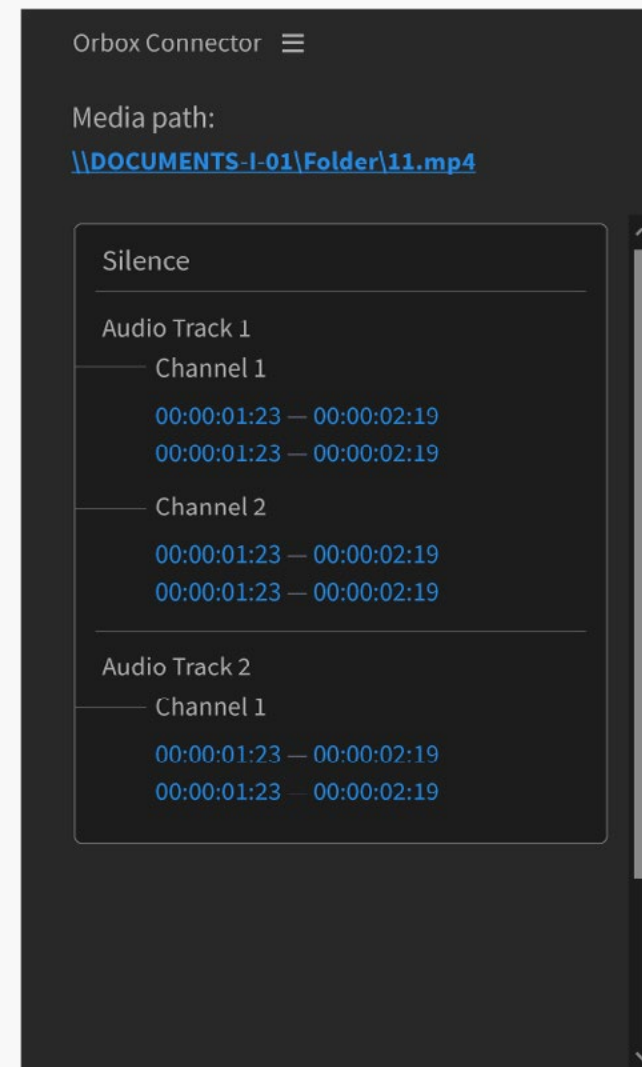

- Basic and detailed PDF/HTML reports
- Media players to watch and edit QC results:
 - Web-based player
 - Windows player (including image output on SDI display)

Plugin for Adobe Premiere Pro

Plugin for Adobe Premiere Pro enables to watch the QC results right within the video editing program interface

- Audio analysis and loudness correction in compliance with EBU R128 and other industry standards
- Channel mapping

Software integration with any
third-party system

System Redundancy

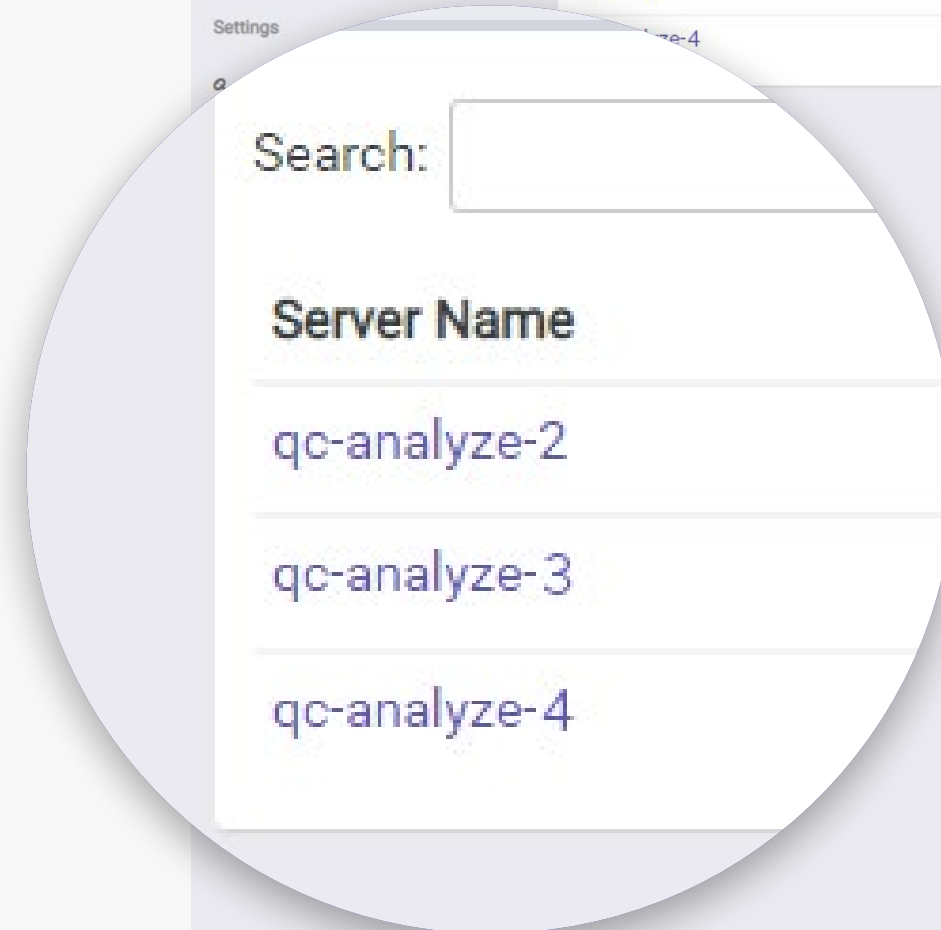

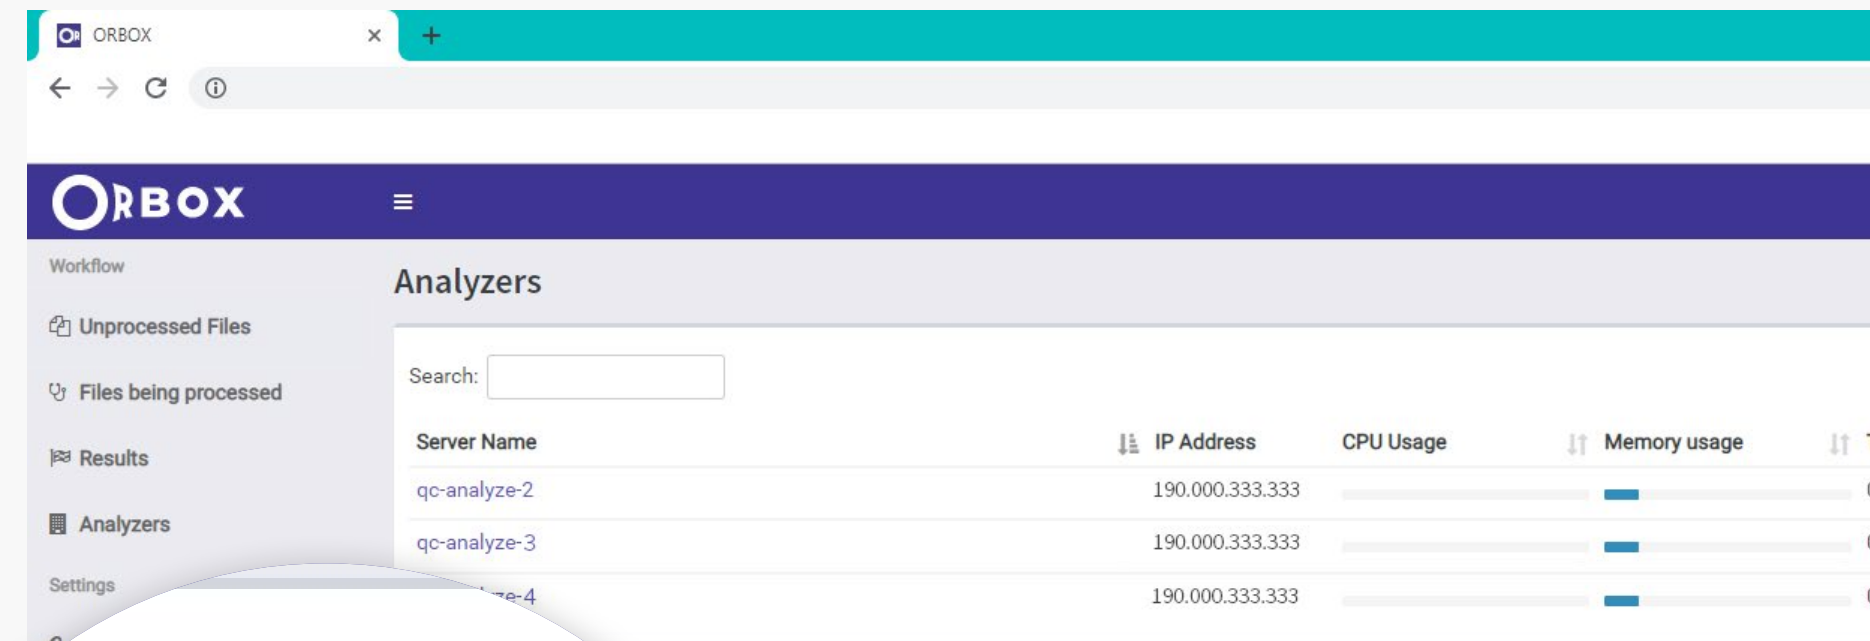

Automatic hot redundancy in case any server goes down

Scalability and Licensing

- The system is easily expanded by adding new analysis servers
- Control server is responsible for load balancing between analysis servers, as well as providing reports via web interface

ORBOX Tests

- Container Compliance
- Container Integrity
- Audio/Video Codecs
- Frame Size
- Aspect Ratio
- Frame Rate
- Video Bitrate
- Real Video Bitrate
- Scan Mode
- Field Order
- Chroma Subsampling
- Start Time Code
- No. of Audio Channels
- Audio Sampling Rate
- Audio Bit Depth
- Video Bit Depth

- Letter/Pillar Box
- Flash Frames
- Blockiness
- Compression Artifacts
- Test Pattern
- Freeze Frames
- Black Frames
- Combing
- Black and White Levels
- Chroma Level

- Loudness
- Silence
- Clipping
- Mono
- Audio Phase

- The quality of media content is priority #1 for OTT service providers
- The system detects VOD content defects before its delivery to subscribers
- VOD content verification is based on video, audio and metadata parameters at any point of origination and content delivery to broadcast servers

- GOP Structure
- Validation of Chunks: Start Time Consistency, Structure Validation
- HLS Manifest Consistency
- HLS Bitrate Conformance
- Subtitles and Closed Captions
- PTS DTS Continuity

- HDR Brightness Conversion Systems
- HDR Mastering Display Luminance
- HDR Display Primaries
- HDR Chromaticity Of White Point
- HDR MaxCI
- HDR MaxFall
- HDR Colour Range
- HDR Colour Primaries

Standards:

SMPTE ST-2094, BT.2100, ST-2084

Containers

- AVI
- MXF
- MP4
- MOV
- HLS

Codecs

- DV/DVCPRO/DVCPROHD
- MPEG-2
- H.264
- H.265
- Apple ProRes
- Avid DNxHD
- AAC, PCM

The system consists of the analysis server and the control server:

Control server

- Processor: Intel Core i5
- 8 GB RAM
- 300 GB HDD
- OS: Windows 8, 10

Analysis server

- Processor: Intel Xeon E5-2630 (x2)
- 16 GB RAM
- 1TB HDD (RAID1)
- OS: Debian 9, Ubuntu 18.04

Servers can be virtual and should have the same technical characteristics as “physical” ones

Our Customers

Customer

Match TV — Russian free-to-air channel about sports and healthy lifestyle that began broadcasting on November 1, 2015

“ORBOX with its constantly enhanced feature set meets all quality control requirements we have. It helps us to ensure the best-in-class viewing experience for every Match TV user”.

Andrey Udalov,
CTO for “Match TV”

Task

To develop an automated file-based QC system for major Russian sports TV station to process multi-format media files from multiple sources

Results

- Automated processing of large media file volumes
- Minimized reputational and financial risks caused by defected content
- Cost reduction in QC department

Customer

Nika TV — Russian satellite TV and radio broadcaster going on air since February 20, 1991. It serves Russia and other CIS countries, Baltic states, countries of Western and Eastern Europe

“As compared to a wide range of competitive QC tools, ORBOX has the best price-quality ratio and seems to be specifically designed to meet the unique needs of our TV station”.

Aleksander Varechkin,
CTO for “Nika TV”

Task

To integrate an automated file-based QC system into customer's workflow to verify technical parameters of media files produced by the TV station and its partners. MPEG PS files support required

Results

- Receiving simple and descriptive reports about detected errors and files incompliant with technical requirements
- Quick analysis helps to decide whether the content is ready to be broadcast
- Real-time tracking of failures in content production processes
