

Next generation backbone
for digital transformation.

Rierino Core.

Rierino Core is a smart microservice development platform for digital enterprises targeting rapid creation of custom solutions.

Low-code for high complexity.

Goes beyond basic app generation to support sophisticated cloud solution development while fostering collaboration between technical and non-technical users

Composable beyond microservice.

Allows for more granular customizations and integrations compared to standard pre-built plug-ins while giving you the freedom to refine the architecture model

Data-first with central intelligence.

Operational and core-integrated intelligence capabilities where AI/ML can be embedded in any API, data informs every process flow and automatically guides users

Core Modules.

Rierino Core has a highly extensible structure allowing you to easily add or customize modules through simple configurations.

Distributed API Designer

Microservice Builder

Business Rule Engine

ML Orchestrator

Query Manager

Complex Event Processor

Scripting Engine

Admin UI Designer

Core Features.

Rierino Core is an enterprise-grade solution designed to accommodate large-scale, security-sensitive, and low-latency deployment requirements.

Open Architecture

Automated DevOps & MLOps

Centralized Command Control

Built-in Change Data Capture

Integrate with Anything

Infinite Cost-Optimized Scalability

Configurable Resilience

Authentication & Session Management

Embedded Reporting & AI

Why Rierino.

Rierino Core provides better ROI and TCO as a robust hyperflexible canvas. It allows you to grow and compete with your technology instead of outgrowing it every few years or being stuck with an outdated stack.

Rapid In-House Innovation

Faster time to value through quick configurations instead of heavy development

Future-proof stack with the ability to replace tech without scrapping existing microservices

Empowered Business Users

Diverse use cases with immediate go-live not tied to a release cycle or framework

Better UX and reporting with improved query performance adapting to business requirements

Solid Strategic Results

Increased ROI maximizing real-time data with fully automated and integrated MLOps

Optimal performance aligned to internal strategy for security, geography & resilience
