

Data Center Migration

Rapidly migrate to the cloud and accelerate innovation

Service overview at-a-glance

Migrating applications to the cloud with our Data Center Migration Solution on Azure is a faster and less complicated path to shed legacy architectures, enabling enterprises to accelerate innovation, improve operational efficiency, increase speed to market and reduce capital expenses. When applications can be migrated without code changes, then the enterprise reduces risk of failure and increases speed of adoption.

SERVICES

Re-hosting

- Migrate applications to the cloud with no code modification

Application Re-platforming

- Migrate applications to a new platform in the cloud no code modification

Mainframe Re-hosting

- Migrate mainframe applications to the cloud with the NTT DATA UniKix™ re-hosting platform

Enterprise Application Migration

- Migrate on-premise SAP, Oracle, or other enterprise apps to Azure

PHASES

Discover

- Clarify and confirm specific migration objectives
- Assess the current state

Solution/Assessment

- Build the migration plan and roadmap from the findings in the Discovery phase

Build

- Develop the cloud platform destination

Migration Execution

- Complete migration sprints

BENEFITS

Accelerate innovation

Increase speed to market

Reduce potential migration risks

Improve operational efficiencies and reduce capital expenses

WHY NTT DATA?

Gold
Microsoft
Partner

Microsoft Gold Competencies:
• Cloud Platform
• DevOps
• Security
• Windows

Microsoft Advanced Specializations:
• Windows/SQL Svr Migration to Azure
• SAP on Azure
• Identity/Access Mgt

NTT DATA has **5,000+** Microsoft certifications
