

Slalom ViewPort

Make Data Available

You want to make the most of your data visualizations in your business, but there's something missing.

Your business groups are using multiple different visualization tools and you want your Tableau users to play with their Qlik using counterparts. What can you do to help users share and collaborate across platforms?

ViewPort is an accelerator that helps your enterprise access vital business data in a single, secure, and easy to use location.

It provides powerful collaboration and communications features that can help ensure you get the most out of your investments in data analytics.

Slalom is focused on **helping companies realize their vision of data visualization**. Our purpose is based on the belief that through a **great user experience, collaboration, improved communication**, our clients can be more efficient and effective at getting .

Multiple Platform Support

Unify access to multiple BI platforms, including Tableau, Qlik, Power BI, and others

Tell a Story

ViewPort lets users create interactive data storyboards that can display information from multiple platforms to get your message across.

Powerful Cataloging and Search

Users can quickly find the information that they need using advanced search and refinement functionality

Drive Adoption

Giving users a single point of access for BI platforms makes it easier for users to access and share using AI

Social Collaboration

Allow users to easily share and communicate on information. Users can rate what they see and provide feedback to authors

Secure Access

ViewPort utilizes existing BI platform security to ensure that users only see what they're allowed to see

We bring knowledge and experience in applying user experience design principles to unique client situations to accelerate outcomes, improve value, and build a better culture
