

Microsoft Endpoint Manager 3-day Workshop

Do you hesitate with moving to cloud-based management? We will assist you with a full-fledged workshop on how to deploy and implement Microsoft Endpoint Manager in your environment.

What is Microsoft Endpoint Manager?

Microsoft Endpoint Manager helps deliver the modern workplace and modern management to keep your data secure, in the cloud and on-premises. Endpoint Manager includes the services and tools you use to manage and monitor mobile devices, desktop computers, virtual machines, embedded devices, and servers.

Endpoint Manager combines services you may know and already be using, including Microsoft Intune, Configuration Manager, Desktop Analytics, co-management, and Windows Autopilot. These services are part of the Microsoft 365 stack to help secure access, protect data, and respond and manage risk.

With this Workshop you will receive

- Mapping your environment and a demo setup of Microsoft Endpoint Manager
- Create a design and implementation
- Setup of profiles, applications, and compliance
- How to secure clients in the cloud
- Review of administration on various platforms (iOS, Android, W10)
- Mapping the customer's needs and further development of the service

Gold
