

Agora Surveillance for ESPs

With Agora, operators enable remote operation for electrical submersible pumps to minimize downtime associated with pump failures via the Agora Platform

Surveillance for ESPs delivers 24/7 monitor and alarming capabilities that enable operators to optimize ESP activity remotely, in real time.

Challenges

Enable automated event detection for electric submersible pumps (ESP) to minimize downtime associated with pump failures

Solution

Utilize the app to determine the root cause of anomalies, and perform corrective actions using automation or remote control

Results

Reduce downtime associated with Pump failures

Minimize HSE risk by performing corrective actions using automation or remote control, thus eliminating trips to the well site.
