

## Data Coalitions

### Sensitive Data Management

#### Key Benefits

- Increased transparency for your organisation
- Compliance with regulatory controls
- Simplify complex information flows
- Drive new value creation through innovation

#### Measurable Results

- Reduce agreement setup times from 6 months to 6 days then 6 hours, then 6 minutes
- Transparency on all data shared across the organisation or between organisations
- Reduce costs to setup and to operate

#### Professional Platform

- SaaS
- Secure API
- Fully configurable
- Highly secure

Flusso streamlines the complexities of accessing, maintaining and managing sensitive data, integrating all processes and third-party compliance requirements into a single consistent party-to-party or multi-party solution

The Data Coalitions platform is based on the Contextual Integrity framework developed by privacy thought leader, Prof Helen Nissenbaum

A better set of practices to simplify the management of sensitive data across the organisation

#### Data Coalition

Formalize your data sharing partnerships and alliances with a Data Coalition. Enshrine the partnership with a charter that outlines a shared vision, purpose, goals and set of values

#### Contextual Information Flows

Well designed information flows start with context. Data Coalitions lets you express information flows through the context of a charter and the Activities, Roles, Data Subjects and Norms relevant to the organisation and its partners

Norms are powerful tools that capture the complexities of expected industry, regulatory, social and cultural behaviours

#### Constraints

There are different expectations for how sensitive data should be shared based on the different defined contexts

Apply your Transmission Principles to these contexts to codify encryption, channel, policy, priority and other constraints

#### Data Contract Management

Simplify the generation of data sharing agreements and contracts

Contracts are aligned to your Data Coalition's defined Charter, Contexts, Constraints and Data Model

Automated digital signing and contract approval workflow

#### Contextual Data Model

Build a shared understanding of a Data Coalition's domain by registering and mapping your organisational data sources to your defined contexts

#### Compliance Automation

Connect the Data Coalitions API to enterprise applications and databases

Measure, monitor and receive scheduled reporting for party compliance and contract performance

## Services

Realise the full value of your investment with our **Data Coalitions Readiness Assessment**

Along the way you will learn about some of the defining trends in privacy theory and tech, understand the core concepts of the Data Coalitions product and how you can leverage it to revolutionise your data management capability

Receive a detailed brief with your strengths and areas to improve data sharing, and a list of opportunities to take advantage of new privacy technology

Data Coalitions will be configured to match the requirements gathered during the assessment, ready for your organisation
