Why should data governance be important to your business?

More and more businesses are beginning to realise the power of data to make critical and innovative business decisions.

Once you are on the journey to discover what data you have available, where it is stored and how it is used, there are new challenges to face to ensure your data is governed correctly.

By creating a data catalogue, providing trusted, searchable data and report automation, all business users can access the information they need, when they need it.

Microsoft Purview is a tool that supports all areas of data governance to map the data estate and lock down sensitive and critical business information.
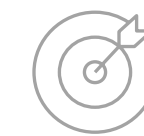

Primary challenges

Lacking single view of key data domains

Lack of data ownership

No data classification for regulatory compliance

Difficulty tracking end-to-end data lineage

Ideal solution

Secure Microsoft Purview deployment to best practice industry standards

Catalogue, discover and measure sensitive data usage

Manage and govern on-premises, multi-cloud and SaaS data sources

Desired outcomes

Enable data consumers to access trustworthy data

Remove organisation-wide data duplication

Improve data maturity and culture

Reduce compliance risk

The art of the possible with Microsoft Purview

Start your data governance journey by learning about Microsoft Purview and testing features and functionality with your own business data. Deploy Azure resources and build on priority use cases with Coeo's Microsoft Purview POC.

Discovery & Design

Workshop your data governance challenges, ambitions and technical requirements focused on data discovery, compliance and operational efficiency.

Data & Deployment

Deploy Microsoft Purview with Azure and integrate a single data source to explore data ownership, master data management or data cataloging capability.

Review & Adopt

Kickstart your adoption of Microsoft Purview with well-defined next steps for improved compliance and data culture

Coeo, Azure, and the Microsoft Purview POC

Coeo are an advanced specialist Microsoft Data & AI partner, providing consultancy and 24/7 dedicated support.

Coeo can support your organisation to plan, build and review a proof of concept Purview implementation with expert advice and guidance aligned to the Cloud Architect Framework approach for technology.

High level design and use case planning

Workshop data governance requirements, identifying suitable data, a priority use case, licensing costs with a high-level implementation design.

Integrate business data with Purview functionality

Configure network and deploy Azure resources to implement Purview and integrate data sources in line with priority use case.

Make a plan with expert consultants

Working together to share knowledge, experience, and best practice implementation advice to assess the possibilities of Microsoft Purview.

Make the most of Microsoft Purview with Coeo
