

# Workshop: Azure DevOps Quality Assessment

# Azure DevOps Quality Assessment.

Do you already have one or more Azure DevOps organizations and want to see if you are getting the best in quality and performance?

## Your Challenge

- Your number of projects has become more and more?
- Do you have projects in which you work together with external parties and want to secure this optimally?
- In the course of time there have been more and more user accounts, how can you optimize your license fees?
- You use pipelines with Build Agents (CI/CD) and have performance problems or the desire to reduce costs?
- Do you want to match your situation with current administration best practices and derive to-dos?

## Our Offer

- **Organization location and associated regulations**
  - Statistical evaluations of the assigned user accounts
  - Number of licenses used & associated costs
- **Evaluation of the ratio of internal to external user accounts**
- **Global security settings and policies**
- **Compilation and analysis of current costs and optimization potential**

## Our Services

- ➔ Collection of information about the Azure DevOps organization Tool-supported, manually and/or by interview
- ➔ Definition of recommended measures and further suggestions for optimized operation
- ➔ Creation of a result documentation with all evaluation results, measures and recommendations for action
