# Secure Identities and Access Workshop

Gain a better understanding of the end-to-end value Microsoft Identity platform and the value it can bring to your organization.

Identity is today's control plane for digital transformation. Organizational barriers are blurring between who is in and out of your network. Cloud apps and the increasing use of personal devices and remote work mean that data is no longer centralized behind traditional network security.

Protect user identities

With identity attacks on the rise, this workshop will show you how to stop tomorrow's data breaches by securing identities today. We will help you find identity risks happening now in your environment, gain insights on your application landscape, and improve your identity security posture.
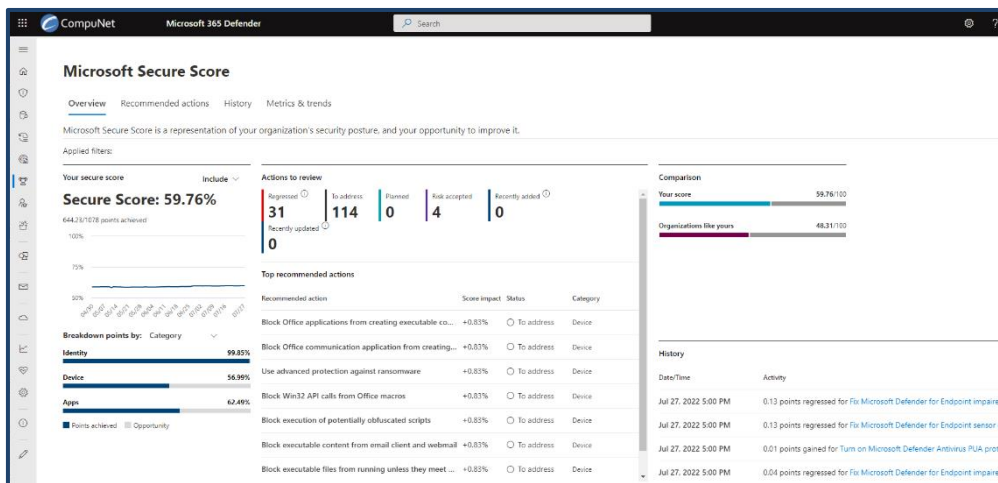

With this four-week workshop, our experts will work with you to:

- Identify potential risks related to identity and see opportunities for improvement

- Provide you with a numerical rating of your identity security posture and see how it compares to similar organizations

- Minimize expenses associated with password reset and helpdesk resources

- Increase visibility with a sample survey of apps your employees are using and if IT supports them or not

Workshop Highlights

- Get a rating of your identity security posture and see how it compares to your peers

- Gain insights into apps used in your environment – even ones unsanctioned by IT

- Understand how to prevent identities from being compromised

- Learn how to reduce costs and improve business agility and security with simplified app access

What To Expect

The foundation of cybersecurity is to quickly and accurately identify authorized users and give them proper access to the information and tools they need to do their job. Our goal is to provide you with tools to protect your authorized users' identities so you can authenticate credentials and manage file access while still giving users the freedom to collaborate with others.

CompuNet's experts in Microsoft compliance will provide you with a:

- Understand your identity goals and objectives
- Define your existing and desired identity security posture
- Provide insights into applications used within your environment (sanctioned and unsanctioned by IT)
- Showcase core IT and user security scenarios through demos
- Develop a joint action plan based key results, recommendations and next steps

We'll customize the workshop based on your organization's needs
