

# Microsoft **Sentinel** Proof of Concept

---

## Summary

# Microsoft Sentinel Proof of Concept Service

---

As a distinguished Microsoft Gold Partner, Wizard Cyber excels in providing top-tier cybersecurity solutions. Our ISO 27001, 9001, and Cyber Essentials Plus certifications demonstrate our dedication to maintaining the highest security and quality management standards.

Our Proof of Concept (POC) service, guided by our Engagement Lifecycle, delivers a customized experience that addresses your organisation's specific security needs. We cover use case requirements, event collection, threat detection, risk analysis, and prompt incident investigation and response.

Our Microsoft Sentinel POC offers your organisation a low-risk opportunity to explore the platform's comprehensive security information and event management (SIEM) capabilities. By connecting your Sentinel instance to our proprietary CYBERSHIELD platform, we amplify its native features, providing an enriched security experience.

Wizard Cyber's Microsoft Sentinel POC enables your organisation to evaluate the platform's advanced threat detection, response, and hunting capabilities with minimal risk. This approach allows you to make an informed decision about the platform's suitability without a significant initial investment.

As a Microsoft Gold Partner, we offer expert guidance and support throughout the POC process. Our skilled team works closely with your organisation to ensure your security objectives are met and the full potential of Microsoft Sentinel is realized.

In summary, Wizard Cyber's Microsoft Sentinel Proof of Concept provides a low-risk, tailored solution for exploring the powerful capabilities of this SIEM platform. With our strong credentials and commitment to exceptional security solutions, you can trust Wizard Cyber to guide you in enhancing your cybersecurity posture with Microsoft Sentinel.

# Microsoft Sentinel

## Proof of Concept

### Project Phases

---

Our Microsoft Sentinel Proof of Concept service offers customised solutions and **expert support to smoothly transition your organisation into a full-scale deployment**

We understand that every organisation's needs are different, and we're committed to providing a flexible POC service that can be customised to suit your requirements. After the POC, we offer project handover documentation and support to help you transition into a full-scale Microsoft Sentinel deployment. Additionally, our managed security services can provide you with a fully managed SOC/XDR service, enabling you to leverage the combined power of the CYBERSHIELD platform and Microsoft Sentinel for comprehensive security coverage.

01

#### Demo

Full demo of our CYBERSHIELD platform and its capabilities complementing Microsoft Sentinel.

02

#### Discovery

We will gather business and technical requirements, review your current security operations, including existing SOC tools and platforms, security policies and procedures, use cases, rules, and alerts, identify data sources, and discover remediation automation

03

#### Design

We will define and agree on the POC plan, desired outcomes with you, and agree on data sources to configure for the pilot.

04

#### Implementation

Following the design, we will set up Microsoft Sentinel in your tenant, integrate agreed data sources, import threat intelligence, add custom alerting rules, add automation playbooks, and develop custom dashboards and analytics.

05

#### Review & Handover

Following the implementation, we will present the Azure Sentinel pilot, show discovered threats, demonstrate key areas such as automated remediation and threat hunting.
