

# PLATFORM ENGINEERING ACCELERATOR INNOVATION ON MICROSOFT AZURE

Accelerate development cycles by empowering developers to consume services through a dedicated self-service portal. By scaling engineering capabilities via automation, customers eliminate friction and costly delays between infrastructure, operations and development teams. This strategic goal is achieved by removing complexity, variability and administrative overhead in favor of curated access to capabilities that enable developers to deliver software faster. Contextualized for business objectives and technology preferences, InCycle's accelerator provides a flexible solution to fast-track implementation by leveraging proven technology, practices and services.

Digital innovation is strategic and challenging. To that end, InCycle packages 20+ years software development experience and Azure expertise to help customers leverage platform engineering to accelerate software delivery. Automating "golden path" frees engineers from infrastructure complexity and ensures the "right way" is also the easiest way.

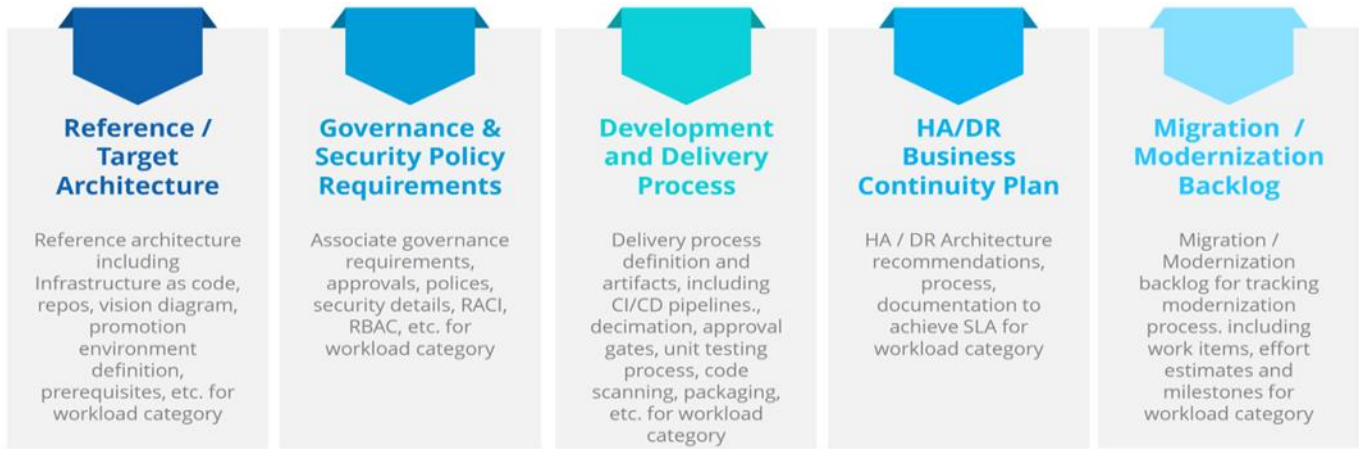

## Point and Click "Golden Paths" (Contextualized templates)

## MODERN DEVELOPER PORTAL

- 1. Push Button Deployment**  
Click a button to create a project with repo automatically configured on Azure DevOps and CI already running for the first build.
- 2. Embedded Standards**  
.Net or Java? Azure Serverless instead of Kubernetes? Security, Policy and Governance? Customize templates with preferred technology and best practices baked-in.
- 3. Platform & Developer Teams**  
Ideal for platform teams, but consumed by developers. Developer portal easily evolves to match changing requirements.

## Azure WAF Template Elements (sample)

"InCycle's **Platform Engineering Accelerator** provided both the expertise and tooling to not only jumpstart our PE project, but also ensure we had a sound business and technology strategy to match!"

**VP, Apps & Platforms**  
Leading Engineering Company
